The purposes of this poster presentation are to 1) describe the implementation of a master’s of science in nursing (MSN) program by providing access to rigorous distance education to students living in rural Pennsylvania and 2) discuss building a critical mass of master’s prepared advanced practice nurses in rural communities; and 3) share formative and summative evaluation information.

Through funding from the U.S. Department of Health and Human Services, Health Resources and Services Administration, Bureau of Health Professions, Division of Nursing, the Jefferson School of Nursing (JNS) expanded its MSN program currently offered at the urban Philadelphia campus to the rural campus in Danville, PA.

Using the methodologies of live web-casting and live video over the Internet, distance students are afforded the opportunity to participate in a live classroom setting rather than experience the static distance methodology of reading through lectures themselves. For example, during the clinical courses, the faculty teaches onsite in Philadelphia webcasting to students in rural Pennsylvania so that they can view and hear the lecture. These newer technologies make possible real-time faculty-student dialogue, student-to-student dialogue, and enhance socialization. Furthermore, the use of advanced technologies allows distance students to discuss with peers and faculty alike, in real time, the problems, successes, and questions which arise during classroom and clinical practices, thereby enhancing critical thinking and diagnostic reasoning skills.

This urban-rural partnership addresses increasing demands for educating greater numbers of master’s prepared advanced practice nurses to work in north and central rural Pennsylvania thus promoting access to health care in rural underserved communities.

ABSTRACT

The purposes of this poster presentation are to 1) describe the implementation of a master’s of science in nursing (MSN) program by providing access to rigorous distance education to students living in rural Pennsylvania and 2) discuss building a critical mass of master’s prepared advanced practice nurses in rural communities; and 3) share formative and summative evaluation information.

About the Grant

Pennsylvania is the third largest employer of non-physician providers and the majority of those individuals work in primary care.

There is a critical shortage of advanced practice nurses (APN) nationally and in the state of Pennsylvania. In 2001, the highest vacancy rate in Pennsylvania’s health care workforce existed for APNs at 14.7%, this is increased from the 2003 vacancy rate of 11.6%.

Advanced practice nurses vacancy rate in north and central Pennsylvania were 15.1% and 17.6% respectively. In addition, the percent change in vacant positions was 76.2%.

Access to primary health care is limited in many rural areas. The project addresses increasing demands for educating greater numbers of APN’s including MSN and DNP nurses to work in north and central rural Pennsylvania. Rapid population growth in some rural communities may have an impact on available services, with varying expectations on local health and human service delivery systems.

Disparities in educational status, employment, and income may require the development of specialized approaches to nursing education and health improvement in rural Pennsylvania.

masters of Science in Nursing (MSN) and Doctor of Nursing Practice (DNP) curricula prepare APN nurses to provide healthcare by meeting objectives pursuant to the Health People 2010.

Masters of Science in Nursing (MSN) and Doctor of Nursing Practice (DNP) curricula prepare APN nurses to provide healthcare by meeting objectives pursuant to the Health People 2010.

Masters of Science in Nursing (MSN) and Doctor of Nursing Practice (DNP) curricula prepare APN nurses to provide healthcare by meeting objectives pursuant to the Health People 2010.

Evaluations

Summative evaluation revealed high student and faculty satisfaction on both campuses.

Formative evaluation comments include:

Was the web cast an effective alternative to the classroom experience?

Absolutely.

Definitely.

Very effective, no stress of driving.

Yes, for the most part I think the web classes are excellent. There are technical glitches that are inherent with distance learning and communication and overall, I don’t feel these small issues negatively impacted the experience.

Was it easy to connect to the web cast course?

Yes, it was easy to connect to the web cast course.

Yes, the link provided was very easy.

I had more problems with my own internet company. I have since figured out that they do their internet maintenance during the day (go figure), and learned that when I’m having problems Starbucks is the quickest answer.

Did you feel any connection with the remote group or did you forget that they were there?

Yes, I feel just as connected as I do when in the classroom. I always felt connected to the group.

Our group is small, so it is easier to keep everyone involved.

Acknowledgements

We would like to acknowledge the Department of Health and Human Services, Health Resources and Services Administration, Bureau of Health Professions, Division of Nursing for their support and funding of this advanced education nursing program.
