The Jefferson Health Mentors Program (JHMP) is a two-year interprofessional education (IPE) experience. Students from six different disciplines (Couples and Family Therapy, Medicine, Nursing, Occupational Therapy, Pharmacy, and Physical Therapy) participate and are assigned to a team that includes a Health Mentor.
Background

- Previous research studies have focused on student perceptions regarding interprofessional education (IPE)\(^1\)

- This pilot study evaluated the Health Mentor’s (HM) perspective relative to the program’s success
Methods

- Mentors who completed the JHMP were identified and mailed a voluntary anonymous survey regarding their participation in the program.
- Each envelope included a cover letter identifying purpose of the survey, the survey itself, and a preaddressed return envelope with a stamp.
- Mentors who did not return the paper survey were called and invited to complete the survey over the phone or to mail the completed survey.
Methods

• 77 surveys were mailed to the HMs
• 49 were returned via mail
• 30 phone calls were made
  - 8 calls resulted in verbal completion over the phone
• A total of 52 surveys were analyzed
Methods

• The survey
  - Sixteen 4-point Likert scale statements
    • 1 = strongly disagree to 4 = strongly agree
  - Eleven statements grounded in the Interprofessional Education Collaborative’s (IPEC) four core competencies:
    • Values/Ethics for Interprofessional Practices (2 statements)
    • Roles/Responsibilities for Collaborative Practice (2 statements)
    • Interprofessional Communication (5 statements)
    • Interprofessional Teamwork and Team-based Care (2 statements)
  - Five statements addressed the program’s impact
  - One open-ended question addressing how the program impacted them
Data Analysis

- Survey results were entered into Microsoft Excel
- Results were analyzed with SPSS
- Each statement was analyzed with the averages from all the HM responses
Survey Question Examples by IPEC Core Competencies

- **Values/Ethics for Interprofessional Practices**
  - “My student team treated me with respect”

- **Roles/Responsibilities for Collaborative Practice**
  - “I understand the different roles and responsibilities of the healthcare students who made up my team”

- **Interprofessional Communication**
  - “My student team communicated well with one another”

- **Interprofessional teamwork and Team-based Care**
  - “The students on my team worked well together”

Results

• 52/77 HMs responded to the survey
  - 67.5% response rate
• The results were very positive, with all average competency ratings > 3 (out of 4)
• Per the data obtained via this survey, it appears that the students fulfilled the IPEC competencies
Qualitative Results - Quotes from our HMs

• “Inspired me to think differently about how to deal w/ the emotional aspects of having a chronic disease during the prime years of my life. Gave me hope - such fresh minds, open, caring, and committed to their specialties in health care. They worked well together and were a bright spot in my life for two years. Thank you to them wasn't enough.”

• “The Health Mentors Program has given me a voice. It makes me feel good knowing that I can have an impact on the next generation of Medical professionals. When I first became a health mentor I wanted be a Social Worker, now being on what is my third or fourth group of students, I think I want to be a teacher.”
Qualitative Results - Quotes from our HMs

- “Impressed with students eagerness to get to know my special needs and individuality.”

- “Respectable young professionals take time out of their busy schedules to sit down and talk with me for an hour or more about my health problems...They cared about me and I them. Please don't ever stop this program.”
Discussion

• Overall, the JHMP program is meeting and/or exceeding the IPEC core competencies for our students
• The JHMP appears to be making a difference in the lives of our volunteer HMs
• Room for improvement in the current survey?
• Next steps
  - Try to increase discrimination in the survey results, given highly positive responses
  - Future surveys will have their diction more closely scrutinized and ask about more specific aspects of the HMP in an effort to produce more discrimination in HM responses
Acknowledgements

• Special thanks and consideration to Sokha Koeuth, Catherine Mills, and Sarah Dallas for their help and support throughout this project!
