ABSTRACTS

Jefferson Longitudinal Study of Medical Education

Compiled and edited by:
Joseph S. Gonnella, M.D.
Mohammadreza Hojat, Ph.D.
J. Jon Veloski, M.S.
The generosity of Valla Amsterdam made the publication of these abstracts possible.

This book is dedicated to her.

Design and typesetting:
by Denise Cotter

Word processing and formatting:
by Phyllis Accetta, and Bethany Brooks

Proofreading:
by Patricia McMorrow

Cover illustration depicts the triple roles of physicians as clinicians, educators, and managers.

## 1 ADMISSIONS

### 1.1 STANDARDIZED TESTS

**Science, Verbal, or Quantitative Skills: Which Is the Most Important Predictor of Physician Competence?**

*Glaser K, Hojat M, Veloski JJ, Blacklow RS, Goepp CE* ........................................ 26

**A Validity Study of the Writing Sample Section of the Medical College Admission Test**

*Hojat M, Erdmann JB, Veloski JJ, Nasca TJ, Callahan CA, Julian E, Peck J* .................... 27

**Predictive Validity of the MCAT for Students with Two Sets of Scores**

*Hojat M, Veloski JJ, Zeleznik C* ................................................................. 28

**Delays in Completing Medical School: Predictors and Outcomes**

*Rosenfeld LM, Hojat M, Veloski JJ, Blacklow RS, Goepp CE* .................................... 29

**The Overall Validity of the New MCAT**

*Veloski JJ, Hojat M, Zeleznik C* ................................................................. 30

**Predictive Validity of the MCAT as a Function of Undergraduate Institutions**

*Zeleznik C, Hojat M, Veloski JJ* ................................................................. 31

**Long-Range Predictive and Differential Validities of the Scholastic Aptitude Test in Medical School**

*Zeleznik C, Hojat M, Veloski JJ* ................................................................. 32

**The Relationship Between MCAT Science Subtest Scores and Performance in Medical School: The Impact of the Undergraduate Institution**

*Zeleznik C, Veloski JJ, Conly S, Hojat M* .................................................... 33

### 1.2 ACADEMIC PREPARATION

**Reexamination of Relationships Between Students’ Undergraduate Majors, Medical School Performances, and Career Plans at Jefferson Medical College**

*Ashikawa H, Hojat M, Zeleznik C, Gonnella JS* .................................................. 36

**The Jefferson-Penn State B.S. - M.D. Program: A 26-Year Experience**

*Callahan CA, Veloski JJ, Gang Xu, Hojat M, Zeleznik C, Gonnella JS* ..................... 37

**Evaluation of an Enrichment Programme for Entering Medical Students Predicted to be in Need of Academic Preparation**

*Glaser K, Hojat M, Callahan CA* ................................................................. 38

**Premedical Training, Personal Characteristics and Performance in Medical School**

*Herman MW, Veloski JJ* ................................................................. 39

**Postbaccalaureate Preparation and Performance in Medical School**

*Hojat M, Blacklow RS, Robeson MR, Veloski JJ, Borenstein BD* ......................... 40

**Evaluation of a Selective Medical School Admissions Policy to Increase the Number of Family Physicians in Rural and Underserved Areas**

*Rabinowitz HK* ................................................................. 41

**A Program to Recruit and Educate Medical Students to Practice Family Medicine in Underserved Areas**

*Rabinowitz HK* ................................................................. 42
Demographic, Educational and Economic Factors Related to Recruitment and Retention of Physicians in Rural Pennsylvania  
  Rabinowitz HK, Diamond JJ, Hojat M, Hazelwood CE  .................................................. 43

Using Postgraduate Clinical Performance to Monitor Change in the Medical School  
  Veloski JJ. ................................................................. 44

Baccalaureate Preparation for Medical School: Does Type of Degree Make a Difference?  
  Zeleznik C, Hojat M, Veloski JJ. ................................................................. 45

Levels of Recommendation for Students and Academic Performance in Medical School  
  Zeleznik C, Hojat M, Veloski JJ. ................................................................. 46

2 JEFFERSON EVALUATIONS

2.1 PRECLINICAL

Curricular Reform May Improve Students’ Performance on Externally Administered Comprehensive Examinations  
  Damjanov I, Fenderson BA, Hojat M, Rubin E .................................................. 48

An Empirical Study of the Predictive Validity of Number Grades in Medical School Using 3 Decades of Longitudinal Data: Implications for a Grading System  
  Gonnella JS, Erdmann JB, Hojat M ................................................................. 49

The Fate of Medical Students with Different Levels of Knowledge: Are the Basic Medical Sciences Relevant to Physician Competence?  
  Hojat M, Gonnella JS, Erdmann JB, Veloski JJ. .................................................. 50

Sooner or Later? USMLE Step 1 Performance and Test Administration Date at the End of the Second Year  
  Pohl CA, Robeson MR, Hojat M, Rattner SL, Veloski JJ ........................................ 51

Using Resident Competence Ratings to Evaluate NBME Passing Standards  
  Turner BJ, Hojat M, Gonnella JS ................................................................. 52

2.2 CLINICAL

Students’ Ratings of Otolaryngology Clerkship Activities: The Role of Residents  
  Ashikawa H, Xu G, Veloski JJ ................................................................. 54

Validity of Faculty Ratings of Students’ Clinical Competence in Core Clerkships in Relation to Scores on Licensing Examinations and Supervisors’ Ratings in Residency  
  Callahan CA, Erdmann JB, Hojat M, Veloski JJ, Rattner SL, Nasca TJ, Gonnella JS  ................................................................. 55

Subtest Scores of a Comprehensive Examination of Medical Knowledge as a Function of Retention Interval  
  Hojat M, Veloski JJ ................................................................. 56

Students’ Gender and Examination of Patients in a Third-Year Family Medicine Clerkship  
  Louis DZ, Gottlieb J, Markham FW, Hojat M, Rabinowitz C, Gonnella JS ................................................................. 57

Evaluations of Medical Students’ Clinical Experiences in a Family Medicine Clerkship: Differences in Patient Encounters by Disease Severity in Different Clerkship Sites  
  Markham FW, Rattner SL, Hojat M, Louis DZ, Rabinowitz C, Gonnella JS  ................................................................. 58

INTRODUCTION
History and Purpose of the Jefferson Longitudinal Study of Medical Education

Medical schools have a social responsibility to monitor the quality of their educational product. In particular, they are obligated to evaluate the effect of any change in the system of medical education (e.g., admissions policies, curriculum, evaluation standards). Assessment of educational outcomes must use empirical data based on a scientific methodology rather than anecdotal observations and personal opinion. Thus, outcome assessment of programs calls for a longitudinal study design that allows for the examination of changes from the beginning of undergraduate medical education, through completion of graduate medical education, and throughout the professional career. This was the spirit in which the Jefferson Longitudinal Study of Medical Education was initiated.

When the Jefferson Longitudinal Study of Medical Education was implemented in 1970, it was envisioned that a comprehensive longitudinal database of medical students and graduates could serve as a valuable source of information. Development of the plan was based on the notion that medical schools have a responsibility to evaluate their own graduates to assure the quality and effectiveness of their educational programs. The Study was implemented at a time when medical education research was still in its infancy and when most other medical schools were not eager to invest resources in such a huge undertaking, which promised few immediate rewards. The title of “longitudinal study” was chosen because of the intention to follow every student from medical school throughout one’s entire professional career.

Throughout the early 1970s, data on demographics, premedical academic performance, and performance measures in medical school were retrospectively collected for students who entered Jefferson Medical College beginning in 1964. The database expanded beginning with the entering class of 1966 (graduating class of 1970) to include measures of clinical competence at Jefferson and after graduation at the end of the first residency year. During the early phases, both retrospective data (for graduates prior to 1970) and prospective data (for students and graduates enrolled in 1970 and thereafter) were maintained in one comprehensive database. This database at the present time contains over 4 million pieces of data on more than 9,000 students and graduates. We believe it to be the most comprehensive, extensive, and uninterrupted database of medical students and graduates that is routinely updated and maintained in a single medical school. The Center for Research in Medical Education and Health Care at Jefferson is the headquarters of the Jefferson Longitudinal Study. Only authorized members of the professional staff of the Center have access to the longitudinal database. Recently, more medical schools than ever before have inquired about our Longitudinal Study, requesting copies of the questionnaires and information about how to set up a longitudinal study. Such outside interest indicates that the Jefferson longitudinal study can serve as a prototype for other medical schools’ longitudinal studies.

Recently the Accreditation Team that reviewed Thomas Jefferson University for the Middle States Commission on Higher Education for the University praised the Jefferson Longitudinal Study and made the following comment: “The Center for Research in Medical Education and Health Care and the Jefferson Medical College are to be commended for their academic interest in outcome data, responsiveness to faculty and department needs and the clear use of data to modify the curriculum and teaching environment...The Center for Research in Medical
