The prices on the present catalogue are those at which our books can generally be furnished by booksellers throughout the United States, who can readily procure any which they may not have on hand. To physicians who have not convenient access to bookstores, we will forward them by mail, at these prices, free of postage (as long as the existing facilities are afforded by the post-office), for any distance under 3,000 miles. As we open accounts only with booksellers, the amount must in every case, without exception, accompany the order, and we assume no risks of the mail, either on the money or on the books; and as we deal only in our own publications, we can supply no others. Gentlemen desirous of purchasing will, therefore, find it more advantageous to deal with the nearest booksellers whenever practicable.

PHILADELPHIA, August, 1860.

**We have just issued a new edition of our ILLUSTRATED CATALOGUE of Medical and Scientific Publications, forming an octavo pamphlet of 80 large pages, containing specimens of illustrations, notices of the medical press, &c. &c. It has been prepared without regard to expense, and will be found one of the handsomest specimens of typographical execution as yet presented in this country. Copies will be sent to any address, by mail, free of postage, on receipt of nine cents in stamps.

Catalogues of our numerous publications in miscellaneous and educational literature forwarded on application.

The attention of physicians is especially solicited to the following important new works and new editions, just issued or nearly ready:

- Ashton on the Rectum
- Condie on Diseases of Children
- Dickson's Elements of Medicine
- Dalton's Human Physiology
- Dungannon's Medical Dictionary
- Erichsen's System of Surgery
- Flint on the Heart
- Fowkes' Manual of Chemistry
- Gross's System of Surgery
- Gray's Anatomy, Descriptive and Surgical
- Habershon on Alimentary Canal
- Hamilton on Fractures and Dislocations
- Meigs on Diseases of Women
- Miller's Obstetrics
- Morland on Urinary Organs
- Parrish's Practical Pharmacy
- Stille's Therapeutics and Materia Medica
- Simpson on Diseases of Women

THE MEDICAL NEWS AND LIBRARY, invariably in advance, 1 00

or, BOTH PERIODICALS mailed, FREE OF POSTAGE, for Five Dollars remitted in advance.

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES,
EDITED BY ISAAC HAYS, M. D.,
is published Quarterly, on the first of January, April, July, and October. Each number contains at least two hundred and eighty large octavo pages, handsomely and appropriately illustrated, wherever necessary. It has now been issued regularly for nearly forty years, and it has been
under the control of the present editor for more than a quarter of a century. Throughout this long period, it has maintained its position in the highest rank of medical periodicals both at home and abroad, and has received the cordial support of the entire profession in this country. Its list of Collabrotons will be found to contain a large number of the most distinguished names of the profession in every section of the United States, rendering the department devoted to

**ORIGINAL COMMUNICATIONS**

tull of varied and important matter, of great interest to all practitioners.

As the aim of the Journal, however, is to combine the advantages presented by all the different varieties of periodicals, in its

**REVIEW DEPARTMENT**

will be found extended and impartial reviews of all important new works, presenting subjects of novelty and interest, together with very numerous

**BIBLIOGRAPHICAL NOTICES,**

including nearly all the medical publications of the day, both in this country and Great Britain, with a choice selection of the more important continental works. This is followed by the

**QUARTERLY SUMMARY,**

being a very full and complete abstract, methodically arranged, of the

**IMPROVEMENTS AND DISCOVERIES IN THE MEDICAL SCIENCES.**

This department of the Journal, so important to the practising physician, is the object of especial care on the part of the editor. It is classified and arranged under different heads, thus facilitating the researches of the reader in pursuit of particular subjects, and will be found to present a very full and accurate digest of all observations, discoveries, and inventions recorded in every branch of medical science. The very extensive arrangements of the publishers are such as to afford to the editor complete materials for this purpose, as he not only regularly receives

**ALL THE AMERICAN MEDICAL AND SCIENTIFIC PERIODICALS,**

but also twenty or thirty of the more important Journals issued in Great Britain and on the Continent, thus enabling him to present in a convenient compass a thorough and complete abstract of everything interesting or important to the physician occurring in any part of the civilized world.

To their old subscribers, many of whom have been on their list for twenty or thirty years, the publishers feel that no promises for the future are necessary; but those who may desire for the first time to subscribe, can rest assured that no exertion will be spared to maintain the Journal in the high position which it has occupied for so long a period.

By reference to the terms it will be seen that, in addition to this large amount of valuable and practical information on every branch of medical science, the subscriber, by paying in advance, becomes entitled, without further charge, to

**THE MEDICAL NEWS AND LIBRARY,**

a monthly periodical of thirty-two large octavo pages. Its "NEWS DEPARTMENT" presents the current information of the day, while the "LIBRARY DEPARTMENT" is devoted to presenting standard works on various branches of medicine. Within a few years, subscribers have thus received, without expense, many works of the highest character and practical value, such as "Watson's Practice," "Todd and Bowman's Physiology," "Maugainne's Surgery," "West on Children," "West on Females, Part I.," "Habershon on the Alimentary Canal," &c.

While in the number for January, 1880, is commenced a new and highly important work,

**CLINICAL LECTURES ON THE DISEASES OF WOMEN.**

**BY PROFESSOR J. Y. SIMPSON,** of Edinburgh.

**WITH NUMEROUS HANDSOME ILLUSTRATIONS.**

These Lectures, published in England under the supervision of the Author, carry with them all the weight of his wide experience and distinguished reputation. Their eminently practical nature, and the importance of the subject treated, cannot fail to render them in the highest degree satisfactory to subscribers, who can thus secure them without cost. The present is therefore a particularly eligible time for gentlemen to commence their subscriptions.

It will thus be seen that for the small sum of FIVE DOLLARS, paid in advance, the subscriber will obtain a Quarterly and a Monthly periodical,

**EMBRACING NEARLY SIXTEEN HUNDRED LARGE OCTAVO PAGES,**

mailed to any part of the United States, free of postage.

These subscribers who do not pay in advance will bear in mind that their subscription of Five Dollars will entitle them to the Journal only, without the News, and that they will be at the expense of their own postage on the receipt of each number. The advantage of a remittance when ordering the Journal will thus be apparent.

As the Medical News and Library is in no case sent without advance payment, its subscribers will always receive it free of postage.

Remittances of subscriptions can be mailed at our risk, when a certificate is taken from the Postmaster that the money is duly inclosed and forwarded.

BLANCHARD & LEA, PHILADELPHIA.
ON THE DISEASES, INJURIES, AND MALFORMATIONS OF THE RECTUM AND ANUS; with remarks on Habitual Constipation. From the third and enlarged London edition. With handsome illustrations. In one very beautifully printed octavo volume, of about 300 pages. (Now Ready.) $2 00.

The most complete one we possess on the subject. Medical-Chirurgical Review.

Its merits as a practical instructor, well arranged, abundantly furnished with illustrative cases, and clearly and comprehensively, albeit too diffusely, written, are incontestable. They have been sufficiently endorsed by the verdict of his countrymen which it has been taken, and diligently written, are incontestable. They have been sulk-fully respected in the United States were the volume placed within the reach of American practitioners. We are satisfied after a careful examination of the volume, and a comparison of its contents with those of its leading predecessors and contemporaries, that the best way for the reader to avail himself of the excellent advice given in the concluding paragraphs above, would be to provide himself with a copy of the book from which it has been taken, and diligently to con its instructive pages. They may secure to him many a triumph and fervent blessing.—Am. Journal Med. Sciences, April, 1858.

ALLEN (J. M.), M. D.,
Professor of Anatomy in the Pennsylvania Medical College, &c.

THE PRACTICAL ANATOMIST; or, The Student's Guide in the Dissecting-Room. With 266 illustrations. In one handsome royal 12mo. volume, of over 600 pages, leather. $2 25.

However valuable may be the "Dissector's Guides" which we, of late, have had occasion to notice, we feel confident that the work of Dr. Allen is superior to any of them. We believe with the author, that none is so fully illustrated as this, and the arrangement of the work is such as to facilitate the labors of the student in acquiring a thorough practical knowledge of Anatomy. We most cordially recommend it to their attention.—Western Lancet.

We believe it to be one of the most useful works upon the subject ever written. It is handsomely illustrated, well printed, and will be found of convenient size for use in the dissecting-room.—Med. Examiner.

ANATOMICAL ATLAS.

By Professors H. H. Smith and W. E. Horner, of the University of Pennsylvania. 1 vol. 8vo., extra cloth, with nearly 650 illustrations. $2 00.

ABEL (F. A.), F. C. S. AND C. L. BLOXAM.

HANDBOOK OF CHEMISTRY, Theoretical, Practical, and Technical; with a Recommendatory Preface by Dr. Hofmann. In one large octavo volume, extra cloth, of 662 pages, with illustrations. $5 25.

ASHWELL (SAMUEL), M. D.,
Obstetric Physician and Lecturer to Guy's Hospital, London.

A PRACTICAL TREATISE ON THE DISEASES PECULIAR TO WOMEN. Illustrated by Cases derived from Hospital and Private Practice. Third American, from the Third and revised London edition. In one octavo volume, extra cloth, of 528 pages. $3 00.

The most able, and certainly the most standard and practical, work on female diseases that we have yet seen.—Medical-Chirurgical Review.

ARNOTT (NEILL), M. D.

ELEMENTS OF PHYSICS; or Natural Philosophy, General and Medical. Written for universal use, in plain or non-technical language. A new edition, by ISAAC HAYS, M. D. Complete in one octavo volume, leather, of 484 pages, with about two hundred illustrations. $3 50.

BIRD (GOLDING), A. M., M. D., &c.

URINARY DEPOSITS: THEIR DIAGNOSIS, PATHOLOGY, AND THERAPEUTICAL INDICATIONS. Edited by EDMUND LLOYD BIRKETT, M. D. A new American, from the fifth and enlarged London edition. With eighty illustrations on wood. In one handsome octavo volume, of about 400 pages, extra cloth. $2 00. (Just Issued.)

The death of Dr. Bird has rendered it necessary to entrust the revision of the present edition to other hands, and in his performance of the duty thus devolving on him, Dr. Birkett has sedulously endeavored to carry out the author's plan by introducing such new matter and modifications of the text as the progress of science has called for. Notwithstanding the utmost care to keep the work within a reasonable compass, these additions have resulted in a considerable enlargement. It is, therefore, hoped that it will be found fully up to the present condition of the subject, and that the reputation of the volume as a clear, complete, and copious manual, will be fully maintained.
ON DISEASES OF THE LIVER. Third American, from the third and enlarged London edition. In one very handsome octavo volume, extra cloth, with four beautifully colored plates, and numerous wood-cuts.

Has fairly established for itself a place among the classical medical literature of England.—British and Foreign Medical Chir. Review, July, 1857.

Dr. Budd's Treatise on Diseases of the Liver is now a standard work in Medical literature, and during the intervals which have elapsed between the successive editions, the author has incorporated into the text the most striking novelties which have characterized the recent progress of hepatic physiology and pathology; so that although the size of the book is not perceptibly changed, the history of liver diseases is made more complete, and is kept upon a level with the progress of modern science. It is the best work on Diseases of the Liver in any language.—London Med. Times and Gazette, June 27, 1857.

This work, now the standard book of reference on the diseases of which it treats, has been carefully revised, and many new illustrations of the views of the learned author added in the present edition.—Dublin Quarterly Journal, Aug. 1857.

BENNETT (HENRY), M. D.

A PRACTICAL TREATISE ON INFLAMMATION OF THE UTERUS, ITS CERVIX AND APPENDAGES, and on its connection with Uterine Disease. To which is added, a Review of the present state of Uterine Pathology. Fifth American, from the third English edition. In one octavo volume, of about 500 pages, extra cloth. $2.00. (Now Ready.)

The ill health of the author having prevented the promised revision of this work, the present edition is a reprint of the last, without alteration. As the volume has been for some time out of print, gentlemen desiring copies can now procure them.

BRODIE'S CLINICAL LECTURES ON SURGERY. 1 vol. 8vo. cloth. 350 pp. $1.25.
A MANUAL OF MEDICAL DIAGNOSIS; being an Analysis of the Signs and Symptoms of Disease. In one neat octavo volume, extra cloth, of 424 pages. $2.00. (Lately issued.)

Of works exclusively devoted to this important branch, our profession has at command, comparatively, but few, and, therefore, in the publication of the present work, Messrs. Blanchard & Lea have conferred a great favor upon us. Dr. Barclay, from having occupied, for a long period, the position of Medical Registrar at St. George's Hospital, possessed advantages for correct observation and reliable conclusions, as to the significance of symptoms, which have fallen to the lot of but few, either in his own or any other country. He has carefully systematized the results of his observation of over twelve thousand patients, and by his diligence and judicious classification, the profession has been presented with the most convenient and reliable work on the subject of Diagnosis that it has been our good fortune ever to examine; we can, therefore, say of Dr. Barclay's work, that, from his systematic manner of arrangement, his work is one of the best works for reference in the daily emergencies of the practitioner, with which we are acquainted; but, at the same time, we would recommend our readers, especially the younger ones, to read and study diligently the whole work, and the "emergencies" will not occur so often.—Southern Med. and Surg. Journ., March, 1858.

To give this information, to supply this admitted deficiency, is the object of Dr. Barclay's Manual. The task of composing such a work is neither an easy nor a light one; but Dr. Barclay has performed it in a manner which meets our most unqualified approbation. He is no mere theorist; he knows his work thoroughly, and in attempting to perform it, has not exceeded his powers.—British Med. Journal, Dec. 5, 1857.

We venture to predict that the work will be deservedly popular, and soon become, like Watson's Practice, an indispensable necessity to the practitioner.—N. A. Med. Journal, April, 1858.

We hope the volume will have an extensive circulation, not among novices of medicine only, but practitioners also. They will never regret a faithful study of its pages.—Cincinnati Lancet, Mar. '58.

An important acquisition to medical literature. It is a work of high merit, both from the vast importance of the subject upon which it treats, and also from the real ability displayed in its elaboration. In conclusion, let us bespeak for this volume that attention of every student of our art which it so richly deserves—that place in every medical library which it can so well adorn.—Pennsyl. Med. and Surg. Journal.

BARLOW (GEORGE H.), M. D.
Physician to Guy's Hospital, London, &c.

A MANUAL OF THE PRACTICE OF MEDICINE. With Additions by D. F. Condie, M. D., author of "A Practical Treatise on Diseases of Children," &c. In one handsome octavo volume, leather, of over 600 pages. $2.75.

We recommend Dr. Barlow's Manual in the warmest manner as a most valuable vade-mecum. We have had frequent occasion to consult it, and have found it clear, concise, practical, and sound. It is eminently a practical work, containing all that is essential, and avoiding useless theoretical discussion. The work supplies what has been for some time wanting, a manual of practice based upon modern discoveries in pathology and additional views of treatment of disease. It is especially intended for the use of students and junior practitioners, but it will be found hardly less useful to the experienced physician. The American editor has added to the work three important chapters—on Cholera Infantum, Yellow Fever, and Cerebro-spinal Meningitis. These additions, the two first of which are indispensable to a work on practice destined for the profession in this country, are executed with great judgment and fidelity, by Dr. Condie, who has also succeeded happily in imitating the conciseness and clearness of style which are such agreeable characteristics of the original book.—Boston Med. and Surg. Journal.

BARTLETT (ELISHA), M. D.

It is the best work on fevers which has emanated from the American press, and the present editor has carefully availed himself of all information existing upon the subject in the Old and New World, so that the doctrines advanced are brought down to the latest date in the progress of this department of Medical Science.—London Med. Times and Gazette, May 2, 1857.

This excellent monograph on febrile disease, has stood deservedly high since its first publication. It will be seen that it has not remained stationary—on the contrary, the lines of description carefully and accurately drawn, and to the American practitioner is a more valuable and safe guide than any work on fever extant.—Ohio Med. and Surg. Journal, May, 1857.

BROWN (ISAAC BAKER), Surgeon-Acuoucheur to St. Mary's Hospital, &c.

ON SOME DISEASES OF WOMEN ADMITTING OF SURGICAL TREATMENT. With handsome illustrations. One vol. 8vo., extra cloth, pp. 276. $1.60.

Mr. Brown has earned for himself a high reputation in the operative treatment of sordid diseases and injuries to which females are peculiarly subject. We cannot say of his work that it is an important addition to obstetrical literature. The operative suggestions and contrivances which Mr. Brown describes, exhibit much practical sagacity and skill, and merit the careful attention of every surgeon-accoucheur.—Association Journal.

We have no hesitation in recommending this book to the careful attention of all surgeons who make gynecology a part of their study and practice.—Dublin Quarterly Journal.
PRINCIPLES OF HUMAN PHYSIOLOGY; with their applications to Psychology, Pathology, Therapeutics, Hygiene, and Forensic Medicine. A new American, from the last and revised London edition. With nearly three hundred new illustrations. Edited, by FRANCIS GURNEY SMITH, M.D., Professor of the Institutes of Medicine in the Pennsylvania Medical College, &c. In one very large and beautiful octavo volume, of about nine hundred large pages, handsomely printed and strongly bound in leather, with raised bands. $4.25

In the preparation of this new edition, the author has spared no labor to render it, as heretofore, a complete and lucid exposition of the most advanced condition of its important subject. The amount of the additions required to effect this object thoroughly, joined to the former large size of the volume, presenting objections arising from the unwieldy bulk of the work, he has omitted those portions not bearing directly upon Human Physiology, designing to incorporate them in his forthcoming Treatise on General Physiology. As a full and accurate text-book on the Physiology of Man, the work in its present condition therefore presents even greater claims upon the student and physicians than those which have heretofore won for it the very wide and distinguished favor which it has so long enjoyed. The additions of Prof. Smith will be found to supply whatever may have been wanting to the American student, while the introduction of many new illustrations, and the most careful mechanical execution, render the volume one of the most attractive as yet issued.

For upwards of thirteen years Dr. Carpenter's work has been considered by the profession generally, both in this country and England, as the most valuable compendium on the subject of physiology in any language. This distinction it owes to the high attainments and unwearyed industry of its accomplished author. The present edition (which, like the last American one, was prepared by the author himself) is the result of such extensive revision, that it may almost be considered a new work. We need hardly say, in concluding this brief notice, that while the labors of others are indispensable to every student of medicine in this country, it will amply repay the practitioner for its perusal by the interest and value of its contents.—Boston Med. and Surg. Journal.

This is a standard work—the text-book used by all medical students who read the English language. It has passed through several editions in order to keep pace with the rapidly growing science of Physiology. Nothing has been said in its praise which is not justly due; but no one who has studied the work will say of it that it has not kept pace with the rapid advance of the subject.—Western Lancet.

We feel that this abstract can give the reader a very fair idea of its unity, of the admirable manner in which the different parts are woven into one whole, of the lucidness and clearness of its style, of its adaptability to the labors of others. If it is indispensable to every medical student, and invaluable to every practitioner, it is inadequate to the wants of the scientific world at large. It requires a mental and professional preparation far beyond the power of any one who is not already possessed of a good knowledge of the subject. Yet there is no man, we believe, could have brought to so successful an issue as Dr. Carpenter. It required for its production a physiologist at once deeply read in the labors of others. capable of taking a general, critical, and unprejudiced view of those labors, and of combining the varied, heterogeneous materials at his disposal, so as to form an harmonious whole. We feel that this abstract can give the reader a very imperfect idea of the fulness of this work, and no idea of its unity, of the admirable manner in which material has been brought, from the most various sources, to conduce to its completeness, of the lucidity of the reasoning it contains, or of the clearness of language which is the distinguishing excellence of the work. For upwards of thirteen years it has been the profession only, but the scientific world at large, must feel deeply indebted to Dr. Carpenter for this great work. It must, indeed, add largely even to his high reputation.—Medical Times.

PRINCIPLES OF COMPARATIVE PHYSIOLOGY. New American, from the Fourth and Revised London edition. In one large and handsome octavo volume, with over three hundred beautiful illustrations. pp. 752. Extra cloth, $4.80; leather, raised bands, $5.25.

The delay which has existed in the appearance of this work has been caused by the very thorough revision and remodelling which it has undergone at the hands of the author, and the large number of new illustrations which have been prepared for it. It will, therefore, be found almost a new work, and fully up to the day in every department of the subject, rendering it a reliable text-book for all students engaged in this branch of science. Every effort has been made to render its typographical finish and mechanical execution worthy of its exalted reputation, and creditable to the mechanical arts of this country.

This book should not only be read but thoroughly studied by every member of the profession. None are too wise or old, to be benefited thereby. But especially to the younger class would we cordially commend it as best fitted of any work in the English language to qualify them for the reception and comprehension of the vast and important truths which are daily being developed in physiology.—Medical Counsellor.

Without pretending to it, it is an encyclopaedia of the subject, accurate and complete in all respects—a truthful reflection of the advanced state at which the science has now arrived.—Dublin Quarterly Journal of Medical Science.

A truly magnificent work—in itself a perfect physi- ologist.—Ranking's Abstract.

This work stands without its fellow. It is one few men in Europe could have undertaken; it is one

To eulogize this great work would be superfluous. We are sure, however, that in this edition the author has remodeled a large portion of the former, and the editor has added much matter of interest, especially in the form of illustrations. We may confidently recommend it as the most complete work on Human Physiology in our language.—Southern Med. and Surg. Journal.

The greatest book on Human Physiology in our language.—N. Y. Med. Times.

The profession of this country, and perhaps also of Europe, have anxiously awaited the appearance of the announcements of the appearance of the last American edition, for its production a physiologist at once deeply read in the labors of others. capable of taking a general, critical, and unprejudiced view of those labors, and of combining the varied, heterogeneous materials at his disposal, so as to form an harmonious whole. We feel that this abstract can give the reader a very imperfect idea of the fulness of this work, and no idea of its unity, of the admirable manner in which material has been brought, from the most various sources, to conduce to its completeness, of the lucidity of the reasoning it contains, or of the clearness of language which is the distinguishing excellence of the work. For upwards of thirteen years it has been the profession only, but the scientific world at large, must feel deeply indebted to Dr. Carpenter for this great work. It must, indeed, add largely even to his high reputation.—Medical Times.
THE MICROSCOPE AND ITS REVELATIONS. With an Appendix containing the Applications of the Microscope to Clinical Medicine, &c. By F. G. Smith, M. D. Illustrated with nearly one hundred and thirty-four beautiful engravings on wood. In one large and very handsome octavo volume, of 724 pages, extra cloth, $4 00; leather, $4 50.

Dr. Carpenter's position as a microscopist and physiologist, and his great experience as a teacher, eminently qualify him to produce what has long been wanted—a good text-book on the practical use of the microscope. In the present volume his object has been, as stated in his Preface, "to combine, within a moderate compass, that information with regard to the use of his 'tools,' which is most essential to the working microscopist, with such an account of the objects best fitted for his study, as might qualify him to comprehend what he observes, and might thus prepare him to benefit science, whilst expanding and refreshing his own mind." That he has succeeded in accomplishing this, no one acquainted with his previous labors can doubt.

The great importance of the microscope as a means of diagnosis, and the number of microscopists who are also physicians, have induced the American publishers, with the author's approval, to add an Appendix, carefully prepared by Professor Smith, on the applications of the instrument to clinical medicine, together with an account of American Microscopes, their modifications and accessories. This portion of the work is illustrated with nearly one hundred wood-cuts, and, it is hoped, will adapt the volume more particularly to the use of the American student.

Every care has been taken in the mechanical execution of the work, which is confidently presented as in no respect inferior to the choicest productions of the London press.

The mode in which the author has executed his intentions may be gathered from the following condensed synopsis of the CONTENTS.

APPENDIX. Microscope as a means of Diagnosis—Injections—Microscopes of American Manufacture.

Those who are acquainted with Dr. Carpenter's previous writings on Animal and Vegetable Physiology, will fully understand how vast a store of knowledge he is able to bring to bear upon a subject before given a subject as the revelations of the microscope; and even those who have no previous acquaintance with the construction or use of this instrument, will find abundance of information conveyed in clear and simple language.—Med. Times and Gazette.

Although originally not intended as a strictly medical work, the additions by Prof. Smith give it a positive claim upon the profession, for which we doubt not he will receive their sincere thanks. Indeed, we are confident where the student of medicine will find such a complete and satisfactory collection of microscopic facts bearing upon physiology and practical medicine as is contained in Prof. Smith's appendix, and this of itself, it seems to us, is fully worth the cost of the volume.—Louisville Medical Review, Nov. 1856.

ELEMENTS (OR MANUAL) OF PHYSIOLOGY, INCLUDING PHYSIOLOGICAL ANATOMY. Second American, from a new and revised London edition. With one hundred and ninety illustrations. In one very handsome octavo volume, leather. pp. 566. $3 00.

In publishing the first edition of this work, its title was altered from that of the London volume, by the substitution of the word "Elements" for that of "Manual," and with the author's sanction the title of "Elements" is still retained as being more expressive of the scope of the treatise.

To say that it is the best manual of Physiology now before the public, would not do sufficient justice to the author.—Buffalo Medical Journal.

In his former works it would seem that he had exhausted the subject of Physiology. In the present, he gives the essence, as it were, of the whole.—N. Y. Journal of Medicine.

Those who have occasion for an elementary treatise on Physiology, cannot do better than to possess themselves of the manual of Dr. Carpenter.—Medical Examiner.

A PRACTICAL TREATISE ON THE DISEASES OF CHILDREN. Fifth edition, revised and augmented. In one large volume, 8vo., leather, of over 750 pages. $3.25.

(Just Issued, 1850.)

In presenting a new and revised edition of this favorite work, the publishers have only to state that the author has endeavored to render it in every respect "a complete and faithful exposition of the pathology and therapeutics of the maladies incident to the earlier stages of existence—a full and exact account of the diseases of infancy and childhood." To accomplish this he has subjected the whole work to a careful and thorough revision, rewritten a considerable portion, and adding several new chapters. In this manner it is hoped that any deficiencies which may have previously existed have been supplied, that the recent labors of practitioners and observers have been thoroughly incorporated, and that in every point the work will be found to maintain the high reputation it has enjoyed as a complete and thoroughly practical book of reference in infantile affections.

A few notices of previous editions are subjoined.

Dr. Condie's scholarship, acumen, industry, and practical sense are manifested in this, as in all his numerous contributions to science.—Dr. Holme's Report to the American Medical Association.

To bestow praise on a book that has received such marked approbation would be superfluous. We need only say, therefore, that of the many treatises which have been written on this branch of medical science, we can confidently affirm that this will be found much more so. The practical wisdom of the author, the advantage of his experience, and the care with which the whole work has been prepared, make it a work of the highest order. We can also say with confidence that it will be an acquisition to every library in the country. -Dublin Quarterly Journal of Medical Science.

ON THE DISEASES OF INFANTS AND CHILDREN. Second American Edition, revised and enlarged by the author. Edited, with Notes, by W. V. KEATING, M. D. In one large and handsome volume, extra cloth, of over 700 pages. $3 00, or in leather, $3 25.

In preparing this work a second time for the American profession, the author has spared no labor in giving it a thorough revision, introducing several new chapters, and rewriting others, while every portion of the volume has been subjected to a severe scrutiny. The efforts of the American editor have been directed to supplying such information relative to matters peculiar to this country as might have escaped the attention of the author, and the whole may, therefore, be safely pronounced one of the most complete works on the subject accessible to the American Profession. By an alteration in the size of the page, these very extensive additions have been accommodated without unduly increasing the size of the work.

This work contains a vast amount of interesting matter, and it is fairly credited that the book may be regarded as an encyclopaedia of information upon the subject of which it treats. It is the first attempt that has been made in Dr. Churchill's untiring industry, inasmuch as there is not a single work upon the diseases of children with which it can be compared. The great amount of statistical research which we at present possess in the English language. The amount of labor consumed upon its production can only be conceived by those who have been similarly occupied, every page has been carefully considered and written. The text is clear and direct, and precision of its teachings, together with the great amount of statistical research which we at present possess in the English lan-

ESSAYS ON THE Puerperal Fever, and other Diseases peculiar to Women. Selected from the writings of British Authors previous to the close of the Eighteenth Century. In one neat octavo volume, extra cloth, of about 450 pages. $2 50.
CHURCHILL (FLEETWOOD), M. D., M. R. I. A., &c.

This edition of Dr. Churchill's very popular treatise may almost be termed a new work, so thoroughly has he revised it in every portion. It will be found greatly enlarged, and brought up to the most recent condition of the subject, while the very handsome series of illustrations introduced, representing such pathological conditions as can be accurately portrayed, present a novel feature, and afford valuable assistance to the young practitioner. Such additions as appeared desirable for the American student have been made by the editor, Dr. Condie, while a marked improvement in the mechanical execution keeps pace with the advance in all other respects which the volume has undergone, while the price has been kept at the former very moderate rate.

It comprises, unquestionably, one of the most exact and comprehensive expositions of the present state of medical knowledge in respect to the diseases of women that has yet been published.—Am. Journ. Med. Sciences, July, 1857.

We hail with much pleasure the volume before us, thoroughly revised, corrected, and brought up to the latest date, by Dr. Churchill himself, and rendered still more valuable by notes, from the experienced and able pen of Dr. D. F. Condie.—Southern Med. and Surg. Journal, Oct. 1857.

This work is the most reliable which we possess on this subject; and is deservedly popular with the profession.—Charleston Med. and Surg. Journal, July, 1857.

Dr. Churchill's treatise on the Diseases of Women is, perhaps, the most popular of his works with the profession in this country. It has been very generally received both as a text-book and manual of practice. The present edition has undergone the most elaborate revision, and additions of an important character have been made, to render it a complete exponent of the present state of our knowledge of these diseases.—N. Y. Journ. of Med., Sept., 1857.

We know of no author who deserves that approbation, on "the diseases of females," to the same extent that Dr. Churchill does. His, indeed, is the only thorough treatise we know of on the subject; and he is recommended to practitioners and students as a masterpiece in its particular department.—The Western Journal of Medicine and Surgery.

As a comprehensive manual for students, or a work of reference for practitioners, it surpasses any other that has ever issued on the same subject from the British press.—Dublin Quart. Journal.

ELEMENTS OF MEDICINE; a Compendious View of Pathology and Therapeutics, or the History and Treatment of Diseases. Second edition, revised. In one large and handsome octavo volume, of 750 pages, leather. $3 75. (Just Issued.)

The steady demand which has so soon exhausted the first edition of this work, sufficiently shows that the author was not mistaken in supposing that a volume of this character was needed—an elaborately detailed manual of practice, which should present the leading principles of medicine with the practical results, in a condensed and perspicuous manner. He has succeeded to render it a valuable series of illustrated and fruitless speculations, it embodies what is most requisite for the student to learn, and at the same time what the active practitioner wants when obliged, in the daily calls of his profession, to refresh his memory on special points. The clear and attractive style of the author renders the whole easy of comprehension, while his long experience gives to his teachings an authority everywhere acknowledged. Few physicians, indeed, have had wider opportunities for observation and experience, and few, perhaps, have used them to better purpose. As the result of a long life devoted to study and practice, the present edition, revised and brought up to the date of publication, which has maintained the reputation already acquired as a condensed and convenient American text-book on the Practice of Medicine. A few notices of the first edition are appended.

This book iseminently what it professes to be; a distinguished merit in this day. Designed for "Teachers and Students of Medicine," and admirably adapted to the use of those who have not time to devote to more extensive works.—Southern Med. and Surg. Journal.

Indited by one of the most accomplished writers of our country, as well as by one who has long held a high position among teachers and practitioners of medicine, this work is entitled to patronage and careful study. The learned author has endeavored to condense in this volume most of the practical matter contained in his former productions, so as to adapt it to the use of those who have not time to devote to more extensive works.—Southern Med. and Surg. Journal.

Prof. Dickson's work supplies, to a great extent, a desideratum long felt in American medicine.—N. O. Med. and Surg. Journal.

Not professing to be a complete and comprehensive treatise, it will not be found full in detail, nor filled with discussions of theories and opinions, but embracing the essential principles of theory and practice, it is admirably adapted to the wants of the American student. Avoiding all that is uncertain, it presents more of the mind of the reader than which is established and verified by experience. The varied and extensive reading of the author is copiously apparent, and all the recent improvements and discoveries in therapeutics and pathology are chronically in its pages.—Charleston Med. Journal.

In the first part of the work the subject of general pathology is presented in outline, giving a beautiful picture of its distinguishing features, and throughout the succeeding chapters we find that he has kept scrupulously within the bounds of sound reasoning and legitimate deduction. Dr. Dickson merits a place in the first rank of American writers.—Western Lancet.

DRUITT (ROBERT), M. R. C. S., &c.

Dr. Druitt's researches into the literature of his subject have been not only extensive, but well directed; the most discordant authors are fairly and impartially quoted, and, while due credit is given to each, their respective merits are weighed with an unprejudiced hand. The grain of wheat is preserved, and the chaff is unmercifully stripped off. The arrangement is simple and philosophical, and the style, though clear and interesting, is so precise, that the book contains more information condensed into a few words than any other surgical work with which we are acquainted.—London Medical Times and Gazette.

No work, in our opinion, equals it in presenting so much valuable surgical matter in so small a compass.—St. Louis Med. and Surgical Journal.
A TREATISE ON HUMAN PHYSIOLOGY, designed for the use of Students and Practitioners of Medicine. With two hundred and fifty-four illustrations on wood. In one very beautiful octavo volume, of over 600 pages, extra cloth, $4.00; leather, raised bands, $4.25.

DEWEES'S COMPREHENSIVE SYSTEM OF MIDWIFERY. Illustrated by occasional cases and many engravings. Twelfth edition, with the author's last improvements and corrections. In one octavo volume, extra cloth, of 608 pages. $3.30.

DEWEES'S TREATISE ON THE PHYSICAL AND THERAPEUTIC MANAGEMENT OF CHILDREN. The present edition. In one volume, one: extra cloth, 545 pages. $2.80

DEWEES'S TREATISE ON THE DISEASES AND MEDICAL TREATMENT OF CHILDREN. Tenth edition. In one volume, one extra cloth, 532 pages, with plates. $3.60

A NEW book and a first rate one; an original book, and one which is immeasurably superior in its details to the majority of those of the same class to which it belongs. In its purity of style and elegance of composition it may safely take its place with the very best of our English classics; while in accuracy of description it is impossible that it could be surpassed. In every line it is so faultlessly shaded forth the eminences of the polished scholar, whose refections are clothed in a garb as interesting as they are instructive, and which, with such a a finish to the work which is immeasurably superior in its details to the majority of those of the same class to which it belongs.

The work before us, however, in our humble judgment, is precisely what it purports to be, and will answer admirably the purpose for which it is intended. It is a perfect textbook, and the best of its kind. In this department that we have ever seen. We have carefully read the book, and speak of its merits from a more than cursory perusal. Looking back upon the work we have just finished, we are conscious of no fear concerning the excellence of its illustrations. No department is so dependent upon good illustrations, and those which keep pace with the subject, as that of physiology. The wood-cuts in the work before us are the best we have ever seen, and, being original, serve to illustrate precisely what is desired.—Buffalo Medical Journal, March, 1860.

A book of genuine merit like this deserves hearty endorsement of those of the same class to which it belongs. It does not speak exhaustively of each subject, yet with sufficient fulness on those living topics which are most interesting and important. Its excellence we are sure of; its defects we have yet to discover. It is a work highly honorable to its author; to his talents, his industry, his training; to the institution with which he is connected, and to American science.—Boston Med. and Surgical Journal, Feb. 24, 1859.

DEWEES'S TREATISE ON THE DISEASES OF FEMALES. Tenth edition. In one volume, extra cloth, 532 pages, with plates. $3.60

Throughout the entire work, the definitions are clear and precise, the arrangement admirable, the arguments strong and clear, and the style nervous, simple, and concise. Section three, treating of Reproduction, is a monograph of unapproached excellence, upon this subject, in the English tongue. For precision and elegance of style, exhaustive method and extent of treatment, fulness of illustration and weight of personal research, we know of no American work on medical science which surpasses it, and the day is far distant when its claims to the respectful attention of every informed scholar and practitioner can be cheerfully conceded by all acquainted with its range and depth.—Charleston Medical Journal, May, 1859.

DEWEES'S COMPREHENSIVE SYSTEM OF MIDWIFERY, AND MEDICAL TREATMENT OF CHILDREN. The last edition. In one volume, octavo, of 3254 double-columned pages, strongly and handsomely bound, with raised bands. $12.00.

For reference, it is above all price to every practitioner. This is the book and a first rate reference for the practitoner. The most complete work on Practical Medicine extant; or, at least, in our language.—Buffalo Medical and Surgical Journal.

For reference, it is above all price to every practitioner. Western Journal of Medicine and Surgery.

One of the most valuable medical publications of the day—as a work of reference it is invaluable.—Western Journal of Medicine and Surgery.

It has been learned at our hands, that a teacher, a work for ready and frequent reference, one in which modern English medicine is exhibited in the most advantageous light.—Medical Examiner.

We rejoice that this work is to be placed within the reach of every practical medical man; and can distinctly mark out. It does not speak exhaustively of every subject, but it does speak suggestively, experimentally, and to their main utilities. Into the subject of Reproduction our author plunges with a kind of loving spirit. Throughout this interesting and obscure department he is a clear and admirable teacher, sometimes a brilliant lecturer.—Am. Med. Monthly, May, 1859.
MEDICAL LEXICON; a Dictionary of Medical Science, containing a concise explanation of the various Subjects and Terms of Anatomy, Physiology, Pathology, Hygiene, Therapeutics, Pharmacology, Pharmacy, Surgery, Obstetrics, Medical Jurisprudence, Dentistry, &c. Notices of Climate and of Mineral Waters; Formula for Official, Empirical, and Dietetic Preparations, &c. With French and other Synonyms. FIFTEENTH EDITION, revised and very greatly enlarged. In one very large and handsome octavo volume, of 992 double-columned pages, in small type; strongly bound in leather, with raised bands. Price $4.00.

Especially care has been devoted in the preparation of this edition to render it in every respect worthy a continuation of the very remarkable favor which it has hitherto enjoyed. The rapid sale of FIFTEEN large editions, and the constantly increasing demand, show that it is regarded by the profession as the standard authority. Stimulated by this fact, the author has endeavored in the present revision to introduce whatever might be necessary "to make it a satisfactory and desirable—if not indispensable—lexicon, in which the student may search without disappointment for every term that has been legalized in the nomenclature of the science." To accomplish this, large additions have been found requisite, and the extent of the author's labors may be estimated from the fact that about SIXTY THOUSAND terms and subjects have been introduced throughout, rendering the whole number of definitions about SIXTY THOUSAND, to accommodate which, the number of pages has been increased by nearly a hundred, notwithstanding an enlargement in the size of the page. The medical press, both in this country and in England, has pronounced the work indispensable to all medical students and practitioners, and the present improved edition will not lose that enviable reputation.

The publishers have endeavored to render the mechanical execution worthy of a volume of such universal use in daily reference. The greatest care has been exercised to obtain the typographical accuracy so necessary in a work of the kind. By the small but exceedingly clear type employed, an immense amount of matter is condensed in its thousand ample pages, while the binding will be at the former very moderate rate, placing it within the reach of all.

This work, the appearance of the fifteenth edition of which, it has become our duty and pleasure to announce, is perhaps the most stupendous monument of labor and erudition in medical literature. One would hardly suppose after constant use of the preceding editions, where we have never failed to find a sufficiently full explanation of every medical term, that the inclusion of six thousand subjects and terms have been added," with a careful revision and correction of the entire work. It is only necessary to announce the advent of this edition to make it occupy the place of the preceding one on the table of every medical man, as it is without doubt the best and most comprehensive work of the kind which has ever appeared.—Buffalo Med. Journ., Jan. 1858.

The work is a monument of patient research, skilful judgment, and vast physical labor, that will perpetuate the name of the author more effectually than any possible device of stone or metal. Dr. Dunglison deserves the thanks not only of the American profession, but of the whole medical world.—North Am. Medico-Chir. Review, Mar. 1858.

A Medical Dictionary better adapted for the wants of the profession than any other with which we are acquainted, and of which it places far above comparison and competition.—Am. Journ. Med. Sciences, Jan. 1858.

We need only say, that the addition of 6,000 new terms, with their accompanying definitions, may be said to constitute a new work, by itself. We have examined the Dictionary attentively, and are most happy to pronounce it unrivalled of its kind. The erudition displayed, and the extraordinary industry which must have been demanded, in its preparation and perfection, redound to the lasting credit of its author, and have furnished us with a volume indispensable at the present day, to all who would find themselves au niveau with the highest standards of medical information.—Boston Medical and Surgical Journal, Dec. 31, 1857.

Good lexicons and encyclopedic works generally, are the most labor-saving contrivances which literature has invented, and by the labor which is required to produce them in the perfect manner of this example is something appallingly to contemplate. The author tells us in his preface that he has added about six thousand terms and subjects to this edition, which, before, was considered universally as the best work of the kind in any language.—Silliman's Journal, March, 1858.

He has razed his gigantic structure to the foundations, and remodelled and reconstructed the entire pile. No less than 60,000 additional subjects and terms are illustrated and analyzed in this new edition, swelling the grand aggregate to beyond sixty thousand! Thus is placed before the profession a complete and thorough exponent of medical terminology, without rival or possibility of rivalry.—Nashville Journ. of Med. and Surg., Jan. 1858.

It is universally acknowledged, we believe, that this work is incomparably the best and most complete Medical Lexicon in the English language. The amount of labor which the distinguished author has bestowed upon it is truly wonderful, and the learning and research displayed in its preparation are equally remarkable. Comment and commendation are unnecessary, as no one at the present day thinks of purchasing any other Medical Dictionary than this.—St. Louis Med. and Surg. Journ., Jan. 1858.

It is the foundation stone of a good medical library, and should always be included in the first list of books purchased by the medical student.—Am. Med. Monthly, Jan. 1858.

A very perfect work of the kind, undoubtedly the most perfect in the English language.—Med. and Surg. Reporter, Jan. 1858.

It is now emphatically the Medical Dictionary of the English language, and for it there is no substitute.—N. H. Med. Journ., Jan. 1858.

It is scarcely necessary to remark that any medical library wanting a copy of Dunglison's Lexicon must be imperfect.—Cincinnati, Jan. 1858.

We have ever considered it the best authority published, and the present edition we may safely say has no equal in the world.—Peninsular Med. Journal, Jan. 1858.

The most complete authority on the subject to be found in any language.—Va. Med. Journal, Feb. 1858.

THE PRACTICE OF MEDICINE. A Treatise on Special Pathology and Therapeutics. Third Edition. In two large octavo volumes, leather, of 1,600 pages. $8.25.
HUMAN PHYSIOLOGY. Eighth edition. Thoroughly revised and extensively modified and enlarged, with five hundred and thirty-two illustrations. In two large and handsomely printed octavo volumes, leather, of about 1500 pages. $7 00.

In revising this work for its eighth appearance, the author has spared no labor to render it worthy a continuance of the very great favor which has been extended to it by the profession. The whole contents have been rearranged, and to a great extent remodelled; the investigations which of late years have been so numerous and so important, have been carefully examined and incorporated, and the whole has been brought up to a level with the present state of the subject. In every respect the author has been to render it a concise but comprehensive treatise, containing the whole body of physiological science, to which the student and man of science can at all times refer with the certainty of finding whatever they are in search of, fully presented in all its aspects; and on no former edition has the author bestowed more labor to secure this result.

The most complete and satisfactory system of Physiology in the English language.—Amer. Med. Journal.

We believe that it can truly be said, no more complete repertory of facts upon the subject treated, can anywhere be found. The author has, moreover, that enviable tact at description and that facility and ease of expression which render him peculiarly acceptable to the casual, or the studious reader. This faculty, so requisite in setting forth many grand and less attractive subjects, lends additional charms to one always fascinating.—Boston Med. and Surg. Journal, Sept. 1856.

The best work of the kind in the English language.—Silliman’s Journal.

The present edition the author has made a perfect mirror of the science as it is at the present hour. As a work upon physiology proper, the science of the functions performed by the body, the student will find it all he wishes.—Nashville Journ. of Med. Sept. 1856.

That he has succeeded, most admirably succeeded in his purpose, is apparent from the appearance of an eighth edition. It is now the great encyclopaedia on the subject, and worthy of a place in every physician’s library.—Western Lancet, Sept. 1856.

BY THE SAME AUTHOR. (A new edition.)

In announcing a new edition of Dr. Dunglison’s General Therapeutics and Materia Medica, we have no words of commendation to bestow upon a work whose merits have been heretofore so often and so justly extolled. It must not be supposed, however, that the present is a mere reprint of the previous edition; the character of the author for laborious research, judicious analysis, and clearness of expression, is fully sustained by the numerous additions he has made to the work, and the careful revision to which he has subjected the whole.—N. A. Medico-Chir. Review, Jan. 1858.

The work will, we have little doubt, be bought and read by the majority of medical students; its size, arrangement, and reliability recommend it to all; no one, we venture to predict, will study it without profit, and there are few to whom it will not be in some measure useful as a work of reference. The young practitioner, more especially, will find the copious indexes appended to this edition of great assistance in the selection and preparation of suitable formulas.—Charleston Med. Journal and Review, Jan. 1858.

NEW REMEDIES, WITH FORMULAE FOR THEIR PREPARATION AND ADMINISTRATION. Seventh edition, with extensive Additions. In one very large octavo volume, leather, of 770 pages. $3 75.

Another edition of the “New Remedies” having been called for, the author has endeavored to add everything of moment that has appeared since the publication of the last edition.

The articles treated of in the former editions will be found to have undergone considerable expansion in this, in order that the author might be enabled to introduce, as far as practicable, the results of the subsequent experience of others, as well as of his own observation and reflection; and to make the work still more deserving of the extended circulation with which the preceding editions have been favored by the profession. By an enlargement of the page, the numerous additions have been incorporated without greatly increasing the bulk of the volume.—Preface.

One of the most useful of the author’s works.—Southern Medical and Surgical Journal.

This elaborate and useful volume should be found in every medical library, for as a book of reference, for physicians, it is unsurpassed by any other work on the subject, and its double index for diseases and for remedies, will be found greatly to enhance its value.—New York Med. Gazette.

The great learning of the author, and his remarkable industry in pushing his researches into every source whence information is derivable, have enabled him to throw together an extensive mass of facts and statements, accompanied by full references to authorities; which last feature renders the work practically valuable to investigators who desire to examine the original papers.—The American Journal of Pharmacy.

THE MEDICAL FORMULARY: being a Collection of Prescriptions, derived from the writings and practice of many of the most eminent physicians of America and Europe. Together with the usual Dietetic Preparations and Antidotes for Poisons. To which is added an Appendix, on the Endermion use of Medicines, and on the use of Ether and Chloroform. The whole accompanied with a few brief Pharmacutic and Medical Observations. Tenth edition, revised and much extended by ROBERT P. THOMAS, M. THE SCIENCE AND ART OF SURGERY; BEING A TREATISE ON SURGICAL INJURIES, DISEASES, AND OPERATIONS. New and improved American, from the second enlarged and carefully revised London edition. Illustrated with over four hundred engravings on wood. In one large and handsome octavo volume, of one thousand closely printed pages, leather, raised bands. $4 50. (Just Issued.)

The very distinguished favor with which this work has been received on both sides of the Atlantic has stimulated the author to render it even more worthy of the position which it has so rapidly attained as a standard authority. Every portion has been carefully revised, numerous additions have been made, and the most watchful care has been exercised to render it a complete exponent of the most advanced condition of surgical science. In this manner the work has been enlarged by about a hundred pages, while the series of engravings has been increased by more than a hundred, rendering it one of the most thoroughly illustrated volumes before the profession. The additions of the author having rendered it more valuable than all the faults of the former American editor, but little has been added in this country; some few notes and occasional illustrations have, however, been introduced to elucidate American modes of practice.

It is, in our humble judgment, decidedly the best book of the kind in the English language. Strange that just such books are not oftener produced by public teachers of surgery in this country and Great Britain. Indeed, it is a matter of great astonishment, but no less true than astonishing, that of the many works on surgery republished in this country within the last fifteen or twenty years as text-books for medical students, this is the only one that even approximates to the fulfilment of the peculiar wants of young men just entering upon the study of this branch of the profession.—Western Jour. of Med. and Surg.

Its value is greatly enhanced by a very copious well-arranged index. We regard this as one of the most valuable contributions to modern surgery. To our humble judgment, it is rich in physiological, pathological, and operative suggestions, does much to direct the student, it will be invaluable in clearing up the most obscure details of complicated cases, and in shedding light upon difficult phenomena.—Buffalo Med. Journal.

We read it, in point both of arrangement and of the marked ability of its treatment of the subjects, as destined to take the first rank in works of this kind. So far as our information extends, it has at present no equal. To the practitioner, as well as the student, it will be invaluable in clearing up the diagnosis of doubtful cases, and in shedding light upon difficult phenomena.—Buffalo Med. Journal.

A PRACTICAL TREATISE ON THE DIAGNOSIS, PATHOLOGY, AND TREATMENT OF DISEASES OF THE HEART. In one neat octavo volume, of about 500 pages, extra cloth, $3 00.

We do not know that Dr. Flint has written anything which is not first rate; but this, his latest contribution to medical literature, in our opinion, surpasses all the others. The work is most comprehensive in its scope, and most sound in the views it enunciates. The descriptions are clear and methodical; the statements are substantiated by facts, and are made with such simplicity and sincerity, that without them they would carry conviction. The style is admirably clear, direct, and free from dryness. With Dr. Walsh's excellent treatise before us, we have no hesitation in saying that Dr. Flint's book is the best work on the heart in the English language.—Boston Med. and Surg. Journal, Dec. 15, 1859.

We have thus endeavored to present our readers with a fair analysis of this remarkable work. Preferring to enjoy the very works of a distinguished author, wherever it was possible, we have essayed to condense into the briefest space a general view of his observations and suggestions, and to direct the attention of our brethren to the abounding stores of valuable matter here collected and arranged for their use. Without a reservation of doubt, we will hereafter be considered complete without this volume; and we trust it will promptly find its way into the hands of every practitioner. One may be sure that the first editions of this work will be speedily exhausted.—N. Am. Med. and Surg. Review, Jan. 15, 1860.

This last work of Prof. Flint will add much to his previous well-earned celebrity, as a writer of great force and beauty, and, with his previous work, places him at the head of American writers upon diseases of the chest. We have adopted his work upon the heart as a text-book, believing it to be more valuable for that purpose than any work of the kind that has yet appeared.—Nashville Med. Journ., Dec. 1859.

With more than pleasure do we hail the advent of this work, for it fills a wide gap on the list of textbooks for our schools, and is, for the practitioner, the most valuable practical work of its kind.—N. O. Med. Newt., Nov. 1859.

In regard to the merits of the work, we have no hesitation in pronouncing it full, accurate, and judicious. Considering the present state of science, such a work was much needed. It should be in the hands of every practitioner.—Chicago Med. Journal, April, 1860.

But these are very trivial spots, and in no wise prevent us from declaring our most hearty approval of the work's ability, industry, and conscientiousness.—Dublin Quarterly Journal of Med. Sciences, Feb. 1860.

He has labored on with the same industry and care, and has come among the first authors of our country is becoming fully established. To the merit of whose title is given above, contributes in no small degree, and no space will not admit of an extended analysis, and we will close this brief notice by commending it without reserve to every class of readers in the profession.—Peninsular Med. A MANUAL OF ELEMENTARY CHEMISTRY; Theoretical and Practical. From the seventh revised and corrected London edition. Edited by Robert Bridges, M. D. In one large royal 12mo. volume, of 600 pages. In leather, $1 65; extra cloth, $1 50. (Just Issued.)

The death of the author having placed the editorial care of this work in the practised hands of Drs. Bence Jones and A. W. Hoffman, everything has been done in its revision which experience could suggest to keep it on a level with the rapid advance of chemical science. Dr. Thomas himself was requisite to this purpose by his knowledge, and the enlargement of this edition is requisite to this purpose by his knowledge, and the enlargement of the volume. At the same time every care has been used to maintain its distinctive character as a condensed manual for the student, divested of all unnecessary detail or mere theoretical speculation. The additions have, of course, been mainly in the department of Organic Chemistry, which has made such rapid progress within the last few years, but yet equal attention has been bestowed on other branches of the subject—Chemical Physics and Inorganic Chemistry—to present all investigations and discoveries of importance, and to keep up the reputation of the volume as a complete manual of the whole science, admirably adapted for the learner. By the use of a small but exceedingly clear type the matter of a large octavo is compressed within the convenient and portable limits of a moderate sized duodecimo, and at the very low price affixed, it is offered as one of the cheapest volumes before the profession.

The work of Dr. Fownes has long been before the public, and its merits have been fully appreciated as the best text-book on chemistry now in existence. We do not, of course, place it in a rank superior to the works of Brande, Graham, Turner, Gregory, or Gmelin, but we say that, as a work for students, it is preferable to any of them. —London Journal of Medicine.

It is an excellent exposition of the chief doctrines and facts of modern chemistry. The size of the work, and still more the condensed yet perspicuous style in which it is written, absolve it from the charges very properly urged against most manuals termed popular.—Edinburgh Journal of Medical Science.

The work of its kind that had issued from the American press. Prof. Thomas has certainly "improved," as well as added to this Formulary, and has rendered it more equal to the best that has been published in any language. The additions amount to about seventy pages, and no effort has been spared to include in them all the recent improvements. A work of this kind appears to us indispensable to the physician, and there is none we can more cordially recommend. —N. Y. Journal of Medicine.

FROM THE AUTHOR'S PREFACE.

"The object of this work is to furnish a systematic and comprehensive treatise on the science and practice of surgery, considered in the broadest sense; one that shall serve the practitioner as a faithful and available guide in his routine of duty. Every one of the departments of surgery has been a favorite subject of study with the author for more than a hundred years; and his most recent labors have been directed towards a more complete and better understanding of the science of surgery, particularly as regards the mechanical department of the art.

The work is based upon the results of the author's own experience, and is intended to be a comprehensive treatise upon surgery in all its departments. As a surgeon, and as a writer, the author has prepared us to expect a treatise of great excellence and originality; but we confess we were by no means prepared for the work which is before us—the most complete treatise upon surgery ever published, either in this or any other country, and we might, perhaps, safely say, the most original. There is no subject belonging properly to surgery which has not received from the author a due share of attention. Dr. Gross has supplied a want in surgical literature which has long been felt by the profession, and he has furnished us with a complete practical treatise upon surgery in all its departments.

The very rapid advances in the Science of Pathological Anatomy during the last few years have rendered essential a thorough modification of this work, with a view of making it a correct exposition of the present state of the subject. The very careful manner in which this task has been executed, and the amount of alteration which it has undergone, have enabled the author to say that it is the most elaborate and complete work on this branch of the healing art which has ever been published in any country. A systematic treatise on the subject; an attempt to classify the facts, and to arrange them in a logical order; and a treatise on the mechanical department of surgery, that is, on the practical application of the principles of surgery, and on the mechanical and surgical treatment of the various diseases of the body, are the objects which the author has sought to accomplish in this treatise.

At present, however, our object is not to review the work (this we purpose doing hereafter), but simply to announce its appearance, that it will be at once acknowledged as the most comprehensive and complete treatise on surgery ever published, either in this or any other country, and that it will be a source of great benefit to the surgeons of the world. We have been favorably impressed with the general style of publication, that we can honestly recommend it as the best work of the kind to be taken home by the young practitioner.—Am. Med. Jour., Jan. 1860.

The treatise of Prof. Gross is not, therefore, a mere text-book for undergraduates, but a systematic treatise of more than thirty years' experience, reading, and reflection by a man of observation, sound judgment, and rare practical tact, and as such deserves to take rank with the renowned productions of a similar character, by Vidal and Boyer, of France, or those of Chelius, Binsius, and Lange, of Germany. Hence, we do not hesitate to express the opinion that it will speedily take the same elevated position in regard to surgery that has been given by common consent to the masterly work of Pereira in Materia Medica, or to Todd and Bowd, in Physiology.—N. Y. Med. and Surg. Journal, Jan. 1860.

With pleasure we record the completion of this long-anticipated work. The reputation which the author has for many years sustained, both as a surgeon and as a writer, and prepared us to expect a treatise of great excellence and originality; but we confess we were by no means prepared for the work which is before us—the most complete treatise upon surgery ever published, either in this or any other country, and we might, perhaps, safely say, the most original. There is no subject belonging properly to surgery which has not received from the author a due share of attention. Dr. Gross has supplied a want in surgical literature which has long been felt by the profession, and he has furnished us with a complete practical treatise upon surgery in all its departments. As Americans, we are proud of the achievements of this work, and we are all the more thankful to him for his extraordinary labors in our behalf.—N. Y. Monthly Review and Buffalo Med. Journal, Oct. 1859.

Price in extra cloth, $4 75; leather, raised bands, $5 25. (Lately Published.)

The very rapid advances in the Science of Pathological Anatomy during the last few years have rendered essential a thorough modification of this work, with a view of making it a correct exposition of the present state of the subject. Science, Nov. 1859.

We most sincerely congratulate the author on the success of his treatise on the subject of surgery, and we are happy to announce that he has already published his proposed object. His book is most admirably arranged and illustrated, and is admirably adapted to the wants of the profession. It is a treatise of great excellence and originality; but we confess we were by no means prepared for the work which is before us—the most complete treatise upon surgery ever published, either in this or any other country, and we might, perhaps, safely say, the most original. A PRACTICAL TREATISE ON FOREIGN BODIES IN THE AIR-PAS-SAGES. In one handsome octavo volume, extra cloth, with illustrations. pp. 468. $2 75.

Philosophical in its design, methodical in its arrangement, ample and sound in its practical details, it may in truth be said to leave scarcely anything to be desired on an important subject.—Boston Med. and Surg. Journal.

Whoever will peruse the vast amount of valuable practical information it contains, will, we think, agree with us, that there is no work in the English language which can make any just pretensions to be its equal.—N. Y. Journal of Medicine.

A volume complete with truths and principles of the utmost value in the investigation of these diseases.—American Medical Journal.

GRAY (HENRY), F. R. S.,
Lecturer on Anatomy at St. George's Hospital, London, &c.

ANATOMY, DESCRIPTIVE AND SURGICAL. The Drawings by H. V. Carter, M. D., late Demonstrator on Anatomy at St. George's Hospital; the Dissections jointly by the Authors and Dr. Carter. In one magnificent imperial octavo volume, of nearly 800 pages, with 363 large and elaborate engravings on wood. Price in extra cloth, $6 25; leather, $7 00. (Just Issued.)

The author has endeavored in this work to cover a more extended range of subjects than is customary in the ordinary text-books, by giving not only the details necessary for the student, but also the application of those details to practice; thus rendering it a most admirable work of reference for the active practitioner. The engravings form a special feature in the work, many of them being the size of nature, nearly all original, and having the names of the various parts printed on the body of the cut, in place of figures of reference with descriptions at the foot. They thus form a complete and splendid series, which will be an undoubted godsend. The plates are copied from reprints of the original engravings,

The work before us is one entitled to the highest praise, and we accordingly welcome it as a valuable addition to medical literature. Intermediate in fulness of detail between the text-books of Saar- pey and of Wilson, its characteristic merit lies in the number and excellence of the engravings it contains. Most of these are original, of much larger than ordinary size, and admirably executed. The various parts are also lettered after the plan adopted in Holden's "Elements of Anatomy." It would be difficult to over-estimate the advantages offered by this mode of pictorial illustration. Bones, ligaments, muscles, bloodvessels, and nerves are each in turn figured, and marked with their appropriate names; thus enabling the student to comprehend, at a glance, what would otherwise often be ignored, or at any rate, not doubted by the professor in his application. In conclusion, we heartily commend the work of Mr. Gray to the attention of the medical profession, and recommend it to that use for which it is intended. We believe, it will be an undoubted godsend. The peculiar value of Mr. Gray's mode of illustration is nowhere more evident than in the chapter on osteology, marked by admirable accuracy and completeness of execution, and a style of language, affording a complete view of the structure of the human body, with especial reference to practical surgery. Thus the volume constitutes a perfect book of reference for the practitioner, demanding a place in even the most limited library of the physician or surgeon, and a work of necessity for the student to fix in his mind what he has learned by the dissecting knife from the book of nature.—The Dublin Quar- terly Journal of Med. Sciences, Nov. 1858.

Mr. Gray's book, in excellency of arrangement and completeness of execution, exceeds any work on anatomy yet published in the English language, affording a complete view of the structure of the human body, with especial reference to practical surgery. Thus the volume constitutes a perfect book of reference for the practitioner, demanding a place in even the most limited library of the physician or surgeon, and a work of necessity for the student to fix in his mind what he has learned by the dissecting knife from the book of nature.—The Dublin Quar- terly Journal of Med. Sciences, Nov. 1858.

In our judgment, the mode of illustration adopted in the present volume cannot but prove to the student of anatomy, the zealous disciple of Vesalius, earnestly desirous of real improvement, the book will certainly be of immense value; but, at the same time, we must also confess that to those simply desirous of " cramming" it will be an undoubted godsend. The peculiar value of Mr. Gray's mode of illustration is nowhere more markedly evident than in the chapter on osteology, and especially in the sections which treat of the various parts of the skeleton, and the features of its most important processes, with a view to refresh the memory of those who may find in the exigencies of practice the necessity of recalling the details of the dissecting room; while combining, as it does, a complete Atlas of Anatomy, with a thorough treatise on systematic, descriptive, and applied Anatomy, the work will be found of essential use to all physicians who receive students in their offices, relieving both preceptor and pupil of much labor in laying the groundwork of a thorough medical education. In conclusion, we heartily commend the work of Mr. Gray to the attention of the medical profession, and recommend it to that use for which it is intended. We believe, it will be an undoubted godsend. The peculiar value of Mr. Gray's mode of illustration is nowhere more evident than in the chapter on osteology, marked by admirable accuracy and completeness of execution, and a style of language, affording a complete view of the structure of the human body, with especial reference to practical surgery. A. Med. Chir. Review, Mar. 1859.

Sciences, Nov. 1858.
This is a valuable contribution to the surgery of most important affections, and is the more welcome, inasmuch as at the present time we do not possess a single complete treatise on Fractures and Dislocations in the English language. It has remained for our American brother to produce a complete treatise upon the subject, and bring together in a convenient form those alterations and improvements that have been made from time to time in the treatment of these affections. It is in every way a great and valuable work in the course before us is the fact that it comprises all the improvements introduced into the practice of both English and American surgery, and at far from omitting mention of our continental neighbors, the author by no means encourages the notion—but too prevalent in some quarters—that nothing is good unless imported from France or Germany. The latter half of the work is devoted to the consideration of those operations and their appropriate treatment, and its merit is fully equal to that of the preceding portion.—The London Lancet, May 5, 1860.

It is emphatically the best book upon the subjects of which it treats, and we cannot doubt that it will continue so to be for an indefinite period of time. We might, however, that we believe it will at once take its place as the best book for consultation by the practitioner; and that it will form the most complete, available, and reliable guide in emergencies of every nature connected with its subjects; and also that the student of surgery may make it his textbook with entire confidence, and with pleasure also, from its agreeable and easy style—we think our own opinion may be gathered as to its merit and value. The work is concise, judicious, and accurate, and we venture to say that this is not alone the only book which it will be richly repaid.—St. Louis Med. and Surg. Journal, March, 1860.

Dr. Hamilton is fortunate in having succeeded in filling the void, so long felt, with what cannot fail to be at once accepted as a model monograph in some respects, and a work of classical authority. We sincerely congratulate the profession of the United States on the appearance of such a publication from one of their number. We have reason to be proud of the undertaking, it has surpassed expectation, and achieved much as was expected from it, and onerous as was the labor and industrial work, young and old, should possess himself of it as a careful guide, gave it a careful study.

The arrangement is simple and systematic, the dictionary clear and graphic, and the illustrations numerous and valuable. The various mechanical appliances are faithfully illustrated, which will be a desideratum for those practitioners who cannot conveniently see the models applied.—New York Med. Press, Feb. 4, 1860.

We regard this work as an honor not only to its author, but to the profession of our country. Were we to review it thoroughly, we could not convey to the mind of the reader more forcibly our honest opinion expressed in a few words—we think it the best book of its kind extant. Every man interested in surgery will soon have this work on his desk. He who has not, will be the loser.—New Orleans Medical News, March, 1860.

Now that it is before us, we feel bound to say that much as we expected from it, and numerous as was our hope that it would appear, it has exceeded all our anticipations, and achieved more than was wiled in its behalf; for its title does not express in full the richness of its contents, and, in the whole, we are proud of this work than of any which has for years emanated from the American medical press; its sale will certainly be large in this country, and we anticipate its eliciting much attention in Europe.—Mass. Medical Record, Mar. 1860.

Every surgeon, young and old, should possess himself of it as a careful guide, give it a careful study.

In one handsome octavo volume, of over 750 pages, with 299 illustrations. $4 25. (Now Ready, January, 1860.)
The Principles and Practice of Ophthalmic Medicine and Surgery. With one hundred and ten illustrations. American from the second and revised London edition, with additions by Edward Hartshorne, M.D., Surgeon to Wills' Hospital, &c. In one large, handsome royal 12mo. volume, extra cloth, of 500 pages. $1 50.

The work sustains, in every point, the already high reputation of the author as an ophthalmic surgeon as well as a physiologist and pathologist. We entertain little doubt that this book will become what its author hoped it might become, a manual for daily reference and consultation by the student and the general practitioner. The work is marked by that correctness, clearness, and precision of style which distinguish all the productions of the learned author.—British and For. Med. Review.

JONES (C. Handfield), F. R. S., & EDWARD H. SIEVEKING, M. D., Assistant Physicians and Lecturers in St. Mary's Hospital, London.

As a concise text-book, containing, in a condensed form, a complete outline of what is known in the domain of Pathological Anatomy, it is perhaps the best work in the English language. Its great merit consists in its completeness and brevity, and in this respect it supplies a great desideratum in our literature. Heretofore the student of pathology was obliged to glean from a great number of monographs, and the field was so extensive that few but culminated it with any degree of success. As a simple work of reference, therefore, it is of great value to the student of pathological anatomy, and should be in every physician's library.—Western Lancet.

KIRKES (WILLIAM SENHOUSE), M. D., Demonstrator of Morbid Anatomy at St. Bartholomew's Hospital, &c.

This is a new and very much improved edition of Dr. Kirkes' well-known Handbook of Physiology. It combines conciseness with completeness, and is, therefore, admirably adapted for consultation by the busy practitioner.—Dublin Quarterly Journal.

Its excellence is in its compactness, its clearness, and its carefully cited authorities. It is in every respect the most convenient of text-books. These gentlemen, Messrs. Kirkes and Paget, have really an immense talent for interesting people. They have the gift of telling us what we want to know, without thinking it necessary to tell us all they know.—Boston Med. and Surg. Journal.

KNAPP'S TECHNOLOGY; or, Chemistry applied LAYCOCK'S LECTURES ON THE PRINCIPLES AND METHODS OF MEDICAL OBSERVATION AND RESEARCH. For the Use of Advanced Students and Junior Practitioners. In one royal 12mo. volume, extra cloth. Price $1.

Laycock's Lectures on the Principles and Methods of Medical Observation and Research. For the Use of Advanced Students and Junior Practitioners. In one large, handsome royal 12mo. volume, leather. price $16 large pages. $2 50.

The great popularity of this volume, and the numerous demands for it during the two years in which it has been out of print, have induced the author in its revision to spare no pains to render it a convenient and satisfactory book for daily reference and consultation by the student and the general practitioner. The work is marked by that correctness, clearness, and precision of style which distinguish all the productions of the learned author.—British and For. Med. Review.

LUDLOW (J. L.), M. D.

A Manual of Examinations upon Anatomy, Physiology, Surgery, Practice of Medicine, Obstetrics, Materia Medica, Chemistry, Pharmacy, and Therapeutics. To which is added a Medical Formulary. Third edition, thoroughly revised and greatly extended and enlarged. With 370 illustrations. In one handsome royal 12mo. volume, leather, of 816 large pages. $2 50.

The great popularity of this volume, and the numerous demands for it during the two years in which it has been out of print, have induced the author in its revision to spare no pains to render it a correct and accurate digest of the most recent condition of all the branches of medical science. In many respects it may, therefore, be regarded rather as a new book than a new edition, an entire section on Physiology having been added, as also one on Organic Chemistry, and many portions having been rewritten. A very complete series of illustrations has been introduced, and every care has been taken in the mechanical execution to render it a convenient and satisfactory book for study or reference. The arrangement of the volume in the form of question and answer renders it especially suited for the office examination of students and for those preparing for graduation.

We know of no better companion for the student during the hours spent in the lecture room, or to refresh, at a glance, his memory of the various topics which are read with interest only by those who possess—presenting just such an outline of the sciences as the student requires during his attendance upon a course of lectures, or for reference whilst preparing for examination.—Am. Medical Journal.

For the student beginning this study, and the practitioner who has but leisure to refresh his memory, this book is invaluable, as it contains all that it is important to know, without special details, which are read with interest only by those who would make a specialty, or desire to possess a critical knowledge of the subject.—Charleston Med. Journal.

A Practical Treatise on the Causes, Symptoms, and Treatment of Spermatorrhea. By M. Lallemand. Translated and edited by W. Barr. Third American Edition. To which is added — ON DISEASES OF THE VESICULAE SEMINALES; AND THEIR ASSOCIATED ORGANS. With special reference to the Morbid Secretions of the Prostatic and Urethral Mucous Membrane. By MARRIS Wilson, M. D. In one neat octavo volume, of about 400 pp., extra cloth. $2 00. (Just Issued.)
YELLOW FEVER, considered in its Historical, Pathological, Etiological, and Therapeutical Relations. Including a Sketch of the Disease as it has occurred in Philadelphia from 1699 to 1854, with an examination of the connections between it and the fevers known under the same name in other parts of temperate as well as in tropical regions. In two large and handsome octavo volumes of nearly 1500 pages, extra cloth.

From Professor S. H. Dickson, Charleston, S. C., September 18, 1855.

A monument of intelligent and well applied research, without example. It is, indeed, in itself, a large library, and is destined to constitute the special resort as a book of reference, in the sphere in which it treats, to all future time.

We have not time at present, engaged as we are, by day and by night, in the work of combating this very disease, now prevailing in our city, to do more than give this eurythary notice of what we consider as undoubtedly the most able and erudite medical publication our country has yet produced. But in view of the startling fact, that this, the most malignant and unmanageable disease of modern times, has for several years been prevailing in our country to a greater extent than ever before; that it is no longer confined to either large or small cities, but penetrates country villages, plantations, and farmhouses; that it is treated with scarcely better success now than thirty or forty years ago; and that there is vast mischief done by ignorant pretenders to knowledge in regard to the disease, and in view of the probability that a majority of southern physicians will be called upon to treat the disease, we trust that this able and comprehensive treatise will be generally read in the south. — Medical and Surgical Journal.

This is decidedly the great American medical work of the day—a full, complete, and systematic treatise, unequalled by any other upon the all-important subject of which it treats, to all future time. The laborious, indefatigable, and learned author has devoted to it many years of arduous research and careful study, and the result is such as will reflect the highest honor upon the author and our country. — Southern Med. and Surg. Journal, Dec. 1855.

The genius and scholarship of this great physician could not have been better employed than in the erection of this towering monument to his own fame, and in the glory of the medical literature of his own country. It is destined to remain the great authority upon the subject of Yellow Fever. The student and physician will find in these volumes a résumé of the sum total of the knowledge of the world upon this, one of the most frightful, and to a greater extent, the most malignant, maladies known to the human race. — Nashville Journal of Medicine.

We deem it fortunate that the splendid work of Dr. La Roche should have been issued from the press at this particular time. The want of a reliable digest of all that is known to relation to this frightful malady has long been felt—a want very satisfactorily met in the work before us. We desire to put on record our just praise to say that Dr. La Roche has succeeded in presenting the work with an able and complete exposition of the subject, which is sure to find its way into every well ordered library. — Va. Stethoscope.

PHYSIOLOGICAL CHEMISTRY. Translated from the second edition by George E. Day, M. D., F. R. S., &c. edited by R. E. Rogers, M. D., Professor of Chemistry in the Medical Department of the University of Pennsylvania, with illustrations selected from Funke’s Atlas of Physiological Chemistry, and an Appendix of plates. Complete in two large and handsome octavo volumes, extra cloth, containing 1200 pages, with nearly two hundred illustrations. $6.00.

This great work, universally acknowledged as the most complete and authoritative exposition of the principles and details of Zöochemistry, in its passage through the press, has received from Professor Lehmann’s pen such care as was absolutely necessary to form a work, which can be presented to the scientific world, Professor Lehmann’s great work requires no laudatory sentences, as, under a new garb, it is now presented to us. The little space at our command would ill suffice to set forth even a small portion of its excellences. — Boston Med. and Surg. Journal, Dec. 1855.

MANUAL OF CHEMICAL PHYSIOLOGY. Translated from the German, with Notes and Additions, by J. CREXTON MOORE, M. D., with an Introductory Essay on Vital Force, by Professor SAMUEL JACKSON, M. D., of the University of Pennsylvania. With Illustrations on Wood. In one very handsome octavo volume, extra cloth, of 336 pages. $2.25.

From Prof. Jackson’s Introductory Essay.

In adopting the handbook of Dr. Lehmann as a manual of Organic Chemistry for the use of the students of the University, and in recommending his original work of PHYSIOLOGICAL CHEMISTRY for their more mature studies, the high value of his researches, and the great weight of his authority in that important department of medical science are fully recognized.

OBSTETRICS: THE SCIENCE AND THE ART. Third edition, revised and improved. With one hundred and twenty-nine illustrations. In one beautifully printed octavo volume, leather, of seven hundred and fifty-two large pages. $3.75.

The rapid demand for another edition of this work is a sufficient expression of the favorable verdict of the profession. In thus preparing it a third time for the press, the author has endeavored to render it in every respect worthy of the favor which it has previously received. To accomplish this he has thoroughly revised it in every part. Some portions have been rewritten, others added, new illustrations have been in many instances substituted for such as were not deemed satisfactory, while, by an alteration in the typographical arrangement, the size of the work has not been increased, and the price remains unaltered. In its present improved form, it is, therefore, hoped that the work will continue to meet the wants of the American profession as a sound, practical, and extended System of Midwifery.

Though the work has received only five pages of enlargement, its chapters throughout wear the impress of careful revision. Expunging and rewriting, remodelling its sentences, with occasional new material, all evince a lively desire that it shall deserve to be regarded as improved in manner as well as matter. In the matter, every stroke of the pen has increased the value of the book, both in expurgations and additions—Western Lancet, Jan. 1857.

The best American work on Midwifery that is accessible to the student and practitioner—N. W. Med. and Surg., Jan. 1857.

This is a standard work by a great American Obstetrician. It is the third and last edition, and, in the language of the preface, the author has "brought the subject up to the latest dates of real improvement in our art and Science."—Nashville Journal of Med. and Surg., May, 1857.

WOMAN: HER DISEASES AND THEIR REMEDIES. A Series of Lectures to his Class. Fourth and Improved edition. In one large and beautifully printed octavo volume, leather, of over 700 pages. $3.60.

The gratifying appreciation of his labors, as evinced by the exhaustion of three large impressions of this work has not been lost upon the author, who has endeavored in every way to render it worthy of the favor with which it has been received. The opportunity thus afforded for another revision has been improved, and the work is now presented as in every way superior to its predecessors, additions and alterations having been made whenever the advance of science has rendered them desirable. The typographical execution of the work will also be found to have undergone a similar improvement, and, as it is hoped, will be found, in the volume, it is intended to maintain its position as the standard American text-book on the Diseases of Females.

A few notices of the previous editions are appended.

In other respects, in our estimation, too much cannot be said in praise of this work. It abounds with beautiful sentences, for conciseness, for originality, and for all that is commendable in a work on the diseases of females, it is not excelled, and probably not equalled in the English language. On the whole, we know of no work on the diseases of women which we can so cordially commend to the student and practitioner as the one before us.—Ohio Med. and Surg. Journal.

The body of the work is worthy of attentive consideration, and is evidently the production of a clear, sagacious, and sagacious mind. Dr. Meigs's letters on the diseases of the external organs contain many interesting and rare cases, and many observations are introduced from the leaves of Dr. Meigs, with a high opinion of his talents and originality.—The British and Foreign Medical and Surgical Review.

Every chapter is replete with practical instruction, and bears the impress of being the composition of an acute and experienced mind. There is an terseness, and at the same time an accuracy in his description of symptoms, and in the rules for diagnosis, which cannot fail to recommend the volume to the attention of the reader.—Rankin's Abstract of Medical and Surgical Journal.

It contains a vast amount of practical knowledge, by one who has accurately observed and retained the experience of many years, and who tells the result in a free, familiar, and pleasant manner.—Dublin Quarterly Journal.

There is an off-hand fervor, a glow, and a warm-heartedness, which we can so cordially commend to the student and practitioner as the one before us. The book teems with solid instruction, and is entirely captivating, and which absolutely hurried the reader through from beginning to end. Besides, the book teems with solid instruction, and it shows the very highest evidence of ability, viz., the clearness with which the information is presented. We know of no better test of one's understanding a subject than the evidence of the power of lucidly explaining it. The most elementary, as well as the obscurest subjects, under the pen of Prof. Meigs, are isolated and made to stand in such bold relief, as to produce distinct impressions upon the mind and memory of the reader.—The Charleston Medical Journal.

Professor Meigs has enlarged and amended this great work, for such it unquestionably is, having passed the ordeal of criticism at home and abroad; but has improved thereby; for in this new edition, the author has introduced real improvements, and increased the value and utility of the book immensely. It presents so many novel, bright, and sparkling thoughts; such an exuberance of new ideas on almost every page, that we confess ourselves to have become enamored with the book and its author; and cannot withhold our congratulations from our Philadelphia confreres, that such a teacher is in their service.—N. Y. Med. Gazette.

MILLER (HENRY), M. D., Professor of Obstetrics and Diseases of Women and Children in the University of Louisville

PRINCIPLES AND PRACTICE OF OBSTETRICS, &c.; including the Treatment of Chronic Inflammation of the Cervix and Body of the Uterus considered as a frequent cause of Abortion. With about one hundred illustrations on wood. In one very handsome octavo volume, of over 600 pages. (Lately Published.) $3 75

The reputation of Dr. Miller as an obstetrician is too widely spread to require the attention of the profession, as he has specially contended for the volume containing the experience of his long and extensive practice. The very favorable reception accorded to his previous treatise embodying the results of the studies, reflections, and experience of Prof. Miller. Few men, if any, in this country, are more competent than he to write on this of the largest of our institutions, a diligent student as well as a careful observer, an original and independent thinker, wedded to no hobbies, ever ready to consider without prejudice new views, and to adopt innovations if they are really improvements, and withal a clear, agreeable writer, a practical treatise from his pen could not fail to possess great value.—Buffalo Medical Journal, Mar. 1858.

In fact, this volume must take its place among the standard systematic treatises on obstetrics; a position to which its merits justly entitle it. The style is such that the descriptions are clear, and each subject is discussed and elucidated with due regard to its practical bearings, which cannot fail to make it acceptable as a guide to both students and practitioners. We cannot, however, close this brief notice without congratulating the author and the profession generally on the acquisition of an additional and important treatise. The author is a western man of whom we feel proud, and we cannot but think that his book will find favorable readers and warm admirers wherever obstetrics is taught and studied as a science and an art.—The Cincinnati Lancet and Observer, Feb. 1858.

A most respectable and valuable addition to our home medical literature, and one reflecting especial credit alike on the author and the institution to which he is attached. The student will find in this work a most useful guide to his studies; the country practitioner, rusty in his reading, can obtain from its pages a fair résumé of the modern literature of the science; and we hope to see this American production generally accepted and recommended by the profession.—Va. Med. Journal, Feb. 1858.

MACKENZIE (W.), M. D., Surgeon Oculist in Scotland in ordinary to Her Majesty, &c. &c.

A PRACTICAL TREATISE ON DISEASES AND INJURIES OF THE EYE. To which is prefixed an Anatomical Introduction explanatory of a Horizontal Section of the Human Eyeball, by THOMAS WHARTON JONES, F. R. S. From the Fourth Revised and Enlarged London Edition. With Notes and Additions by ADDINELL HEWSON, M. D., Surgeon to the Queen's St.?e., &c. &c. In one very large and handsome octavo volume, leather, raised bands, with plates and numerous wood-cuts. $5 25.

The treatise of Dr. Mackenzie indisputably holds the first place, and forms, in respect of learning and research, an Encyclopaedia unequalled in extent by any work of the kind, either English or foreign.—Dixon on Diseases of the Eye.

Few modern books on any department of medicine or surgery have met with such extensive circulation, or have procured for their authors a like amount of European celebrity. The immense research which it displayed, the thorough acquaintance with the subject, practically as well as theoretically, and the able manner in which the author's stores of learning and experience were rendered available for general use, at once procured for the first edition, as well as for subsequent successive editions, a high position as a standard work which each successive edition has more firmly established. We consider it the duty of every physician who has the love of accurate research and the welfare of his patient at heart, to make himself familiar with this the most complete work in the English language upon the diseases of the eye.

PRINCIPLES OF SURGERY. Fourth American, from the third and revised Edinburgh edition. In one large and very beautiful volume, leather, of 700 pages, with two hundred and forty illustrations on wood. $3 75.

The work of Mr. Miller is too well and too favorably known among us, as one of our best text-books, to render any further notice of it necessary than the announcement of a new edition, the fourth in our country, a proof of its extensive circulation among us. As a concise and inside exposition of the science of modern surgery, it stands deservedly high—we know not its superior.—Boston Med. and Surg. Journal.

The work takes rank with Watson's Practice of Physic; it certainly does not fall behind that great work in soundness of principle, in depth of reasoning and research. No physician who values his reputation, or seeks the interests of his clients, can acquit himself before his God and the world without making himself familiar with the sound and philosophical views developed in the foregoing book.—New Orleans Med. and Surg. Journal.

THE PRACTICE OF SURGERY. Fourth American from the last Edinburgh edition. Revised by the American editor. Illustrated by three hundred and sixty-four engravings on wood. In one large octavo volume, leather, of nearly 700 pages. $3 75.

No encomium of ours could add to the popularity of Miller's Surgery. Its reputation in this country is unsurpassed by that of any other work, and, when taken in connection with the author's Principles of Surgery, constitutes a whole, without reference to which no conscientious surgeon would be willing to practice; and so richly merited the reputation they have acquired. The author is an eminently sensible, practical, and well-informed man, who knows exactly what he is talking about and exactly how to talk it.—Kentucky Medical Recorder.

PRACTICAL PHARMACY. Comprising the Arrangements, Apparatus, and Manipulations of the Pharmaceutical Shop and Laboratory. Edited, with extensive Additions, by Prof. William Procter, of the Philadelphia College of Pharmacy. In one handsomely printed octavo volume, extra cloth, of 570 pages, with over 500 engravings on wood. $2 75.
AN ANALYTICAL COMPENDIUM OF THE VARIOUS BRANCHES OF MEDICAL SCIENCE; for the Use and Examination of Students. A new edition, revised and improved. In one very large and handsomely printed royal 12mo., volume, of about one thousand pages, with 374 wood-cuts. Strongly bound in leather, with raised bands. $3 00.

The very flattering reception which has been accorded to this work, and the high estimate placed upon it by the profession, as evidences of its value, has induced the authors to render the volume in its present revision more worthy of the success which has attended it. It has accordingly been thoroughly examined, and such errors as had on former occasions escaped observation have been corrected, and whatever additions were necessary to maintain it on a level with the advance of science have been introduced. The extended series of illustrations has been still further increased and made improved, while, by a slight enlargement of the page, these various additions have been incorporated without increasing the bulk of the volume.

The work is, therefore, again presented as eminently worthy of the favor with which it has hitherto been received. As a book for daily reference by the student requiring a guide to his more elaborate text-books, as a manual for preceptors desiring to stimulate their students by frequent and accurate examination, or as a source from which the practitioners of older date may easily and cheaply acquire a knowledge of the changes and improvement in professional science, its reputation is permanently established.

The best work of the kind with which we are acquainted.—Med. Examiner.

Having made free use of this volume in our examinations of pupils, we can speak from experience in recommending it as an admirable compend for all students, and as especially useful to preceptors who examine their pupils. It will save the teacher much labor by enabling him readily to recall all of the points upon which his pupils should be examined. A work of this sort should be in the hands of every one who takes pupils into his office with a view of examining them; and this is unquestionably the best of its class.—Transylvania Med. Journal.

In the rapid course of lectures, where work for the students is heavy, and review necessary for an examination, a compend is not only valuable, but it is almost a sine qua non. The one before us is, in most of the divisions, the most unexceptionable of all books of the kind that we know of. The newest and soundest doctrines and the latest improvements and discoveries are explicitly, though concisely, laid before the student. There is a class to whom we very sincerely commend this cheap book as worth its weight in silver—that class is the graduates in medicine of more than ten years standing, who have not studied medicine since. They will perhaps find out from it that the science is not exactly now what it was when they left it off.—The Stethoscope.

NELIGAN (J. MOORE), M. D., M. R. I. A., &c.

(A splendid work. Just Issued.)

ATLAS OF CUTANEOUS DISEASES. In one beautiful quarto volume, extra cloth, with splendid colored plates, presenting nearly one hundred elaborate representations of diseases. $1 50.

This beautiful volume is intended as a complete and accurate representation of all the varieties of Diseases of the Skin. While it can be consulted in conjunction with any work on Practice, it has especial reference to the authors' 'Treatise on Diseases of the Skin,' so favorably received by the profession some years since. The publishers feel justified in saying that few more beautifully executed plates have ever been presented to the profession of this country.

Neligan's Atlas of Cutaneous Diseases supplies a long extinct desideratum much felt by the largest class of our profession. It presents, in quarto size, 16 plates, each containing from 3 to 6 figures, and forming in a total of 90 distinct representations of the different species of skin affections, grouped together in genera or families. The illustrations have been taken from nature, and have been copied with such fidelity that they present a striking picture of life; in which the reduced scale applies to give, at a coup d'oeil, the remarkable peculiarities of each individual variety. And while thus the disease is rendered more definable, there is yet no loss of proportion incurred by the necessary concentration. Each figure is highly colored, and so truthful has the artist been that the most fastidious observer could not justly take exception to the correctness of the execution of the pictures under his scrutiny.—Montreal Med. Chronicle.

THE PRINCIPLES AND PRACTICE OF SURGERY. Edited by JOHN NEILL, M. D., Professor of Surgery in the Penna. Medical College, Surgeon to the Pennsylvania Hospital, &c. In one very handsome octavo volume, leather, of 780 pages, with 316 illustrations. $3 75.

We know of no other surgical work of a reasonable size, wherein there is so much theory and practice, or where subjects are more soundly or clearly taught.—The Stethoscope.

Prof. Pirrie, in the work before us, has elaborately discussed the principles of surgery, and a safe and effectual practice predicated upon them. Perhaps no work upon this subject heretofore issued is so full upon the science of the art of surgery.—Nashville Journal of Medicine and Surgery.
AN INTRODUCTION TO PRACTICAL PHARMACY. Designed as a Text-Book for the Student, and as a Guide for the Physician and Pharmacist. With many Formulæ and Prescriptions. Second edition, greatly enlarged and improved. In one handsome octavo volume of 730 pages, with several hundred Illustrations, extra cloth. $3 50. (Now Ready.)

During the short time in which this work has been before the profession, it has been received with a very great favor, and in assuming the position of a standard authority, it has filled a vacancy which had been severely felt. Stimulated by this encouragement, the author, in availing himself of the opportunity of revision, has spared no pains to render it more worthy of the confidence bestowed upon it, and his assiduous labors have made it rather a new book than a new edition, many portions having been rewritten, much important new and important matter added. These alterations and improvements have been rendered necessary by the rapid progress made by pharmaceutical science during the last few years, and by the additional experience obtained in the practical use of the volume as a text-book and work of reference. To accommodate these improvements, the size of the page has been materially enlarged, and the number of pages considerably increased, presenting in all nearly double the matter of the last edition. This work is therefore said to be the complete exponent of the subject in its most advanced condition. From the most ordinary matters in the dispensing office, to the most complicated details of the vegetable alkaloids, it is hoped that everything requisite to the practising physician, and to the apothecary, will be found fully and clearly set forth, and that the new matter alone will be worth more than the very moderate cost of the work to those who have been consulting the previous edition.

That Edward Parrish, in writing a book upon practical Pharmacy some few years ago—one eminently original and unique—did the medical and pharmaceutical world a great service, is not to be questioned, one who has had access to its pages will deny; doubly welcome, then, is this new edition, containing the added results of his recent and rich experience as an observer, teacher, and practical operator in the pharmaceutical laboratory. The excellent plan of the first is more thoroughly and entirely carried out in this edition.—Pennsylvanian Med. Journal, Jan. 1860.

We know of no work on the subject which would be more indispensable to the physician or student desiring information on the subject of which it treats. With Griffith's "Medical Formulary" and this, the practising physician will be supplied with nearly or quite all the most useful information on the subject.—Charleston Med. and Surg. Journal, Jan. 1860.

This edition, now much enlarged, is one of the most useful works of the past year.—N. O. Med. and Surg. Journal, Jan. 1860.

The whole treatise is eminently practical; and there is no production of the kind in the English language so well adapted to the wants of the pharmacist and druggist. To physicians also, it can serve, not only as a highly valuable, especially to those who are obliged to prepare and compound many of their own medicines.—N. Am. Med. Crit. Review, Jan. 1860.

Of course, all apothecaries who have not already a copy of this edition willprocure one of this; it, is, therefore, to physicians residing in the country and in small towns, who cannot avail themselves of the skill of an educated pharmacist, that we would especially commend this work. In it they will find all that they desire to know, and should know, but very little of which they do really know in reference to this important collateral branch of their profession; for it is a well established fact, that, in the education of physicians, while the science of chemistry is well taught, very little attention is paid to the art of preparing them for use, and we know not how this defect can be so well remedied as by procuring and consulting Dr. Parrish's excellent work.—St. Louis Med. Journal, Jan. 1860.

HUMAN HISTOLOGY, in its relations to Anatomy, Physiology, and Pathology; for the use of Medical Students. With four hundred and thirty-four illustrations. In one handsome octavo volume, of over 600 pages. (Lately Published.) $3 75.

It embraces a library upon the topics discussed within itself, and is just what the teacher and learner need. Master the subject, and you will have the advantage, by no means of an ordinary student; for everything is clearly and fully discussed, everything of value is clearly and fully discussed, and nothing is omitted. The complete set forth.—Nashville Journ. of Med. and Surgery, Dec. 1857.

We would recommend it to the medical student and practitioner, as containing a summary of all that is known, of the important matters of the subject of all that is contained in the great works of Simon and Lehmann, and the organic chemists in general. A master that will make the student and practitioner—make this book and you know all that is known of the great fundamental principles of medicine, and we have no hesitation in saying that it is an honor to the American medical profession that one of its members should have produced it.—St. Louis Med. and Surg. From Prof. Hodge, of the University of Pa.

To the American public, it is most valuable, from its intrinsic undoubted excellence, and as being the best authorized exponent of British Midwifery. Its circulation will, I trust, be extensive throughout our country.

It is unnecessary to say anything in regard to the utility of this work. It is already appreciated in our country for the value of the matter, the clearness of its style, and the fulness of its illustrations. To the physician's library it is indispensable, while to the student as a text-book, from which to extract the utility of this work. It is already appreciated in our obstetrical science, it has no superior.—Ohio Med. and Surg. Journal.

The publishers have secured its success by the truly elegant style in which they have brought it out, excelling themselves in its production, especially in its plates. It is dedicated to Prof. Meigs, and has received the highest endorsement of Prof. Hodge, as the best exponent of British Midwifery. We know of no text-book which deserves in all respects to be more highly recommended to students, and we could wish to see it in the hands of every practitioner, for they will find it invaluable for reference.—Med. RICORD (P.), M. D.
A TREATISE ON THE VENEREAL DISEASE. By JOHN HUNTER, F. R. S. With copious Additions, by PH. RICORD, M. D. Translated and Edited, with Notes, by FREEMAN J. BUMSTEAD, M. D., Lecturer on Venereal at the College of Physicians and Surgeons, New York.

Second edition, revised, containing a résumé of RICORD'S RECENT LECTURES ON CHANCRE. In one handsome octavo volume, extra cloth, of 550 pages, with eight plates. $3.25. (Just Issued.)

In revising this work, the editor has endeavored to introduce whatever matter of interest the recent investigations of syphilographers have added to our knowledge of the disease. The principal source from which this has been derived is the volume of "Lectures on Chancre," published a few months since by M. Ricord, which affords a large amount of new and instructive material on many controverted points. In the previous edition, M. Ricord's additions amounted to nearly one-third of the whole, and with the matter now introduced, the work may be considered to present his views and experience more thoroughly and completely than any other.

Every one will recognize the attractiveness and value which this work derives from thus presenting the opinions of these two masters side by side. But, it must be admitted, what has made the fortune of the book, is the fact that it contains the "most complete embodiment of the veritable doctrines of the 18th century, which has ever been made public." The doctrinal ideas of M. Ricord, ideas which, if not universally adopted, are incontestably dominant, have heretofore only been interpreted by more or less skilful secretaries, sometimes accredited and sometimes not. In the notes to Hunter, the master substitutes himself for his interpreters, and gives his original thoughts to the world in a lucid and perfectly intelligible manner. In conclusion we can say that this is incontestably the best treatise on syphilis with which we are acquainted, and, as we do not often employ the phrase, we may be excused for expressing the hope, that it may find a place in the library of every physician.—Virginia Med. and Surg. Journal.

STILLE (ALFRED), M. D.

THERAPEUTICS AND MATERIA MEDICA; a Systematic Treatise on the Action, and Uses of Medicinal Agents, including their Description and History. In two large and handsome octavo volumes, of 1789 pages. (New Ready, 1860.) $8 00.

This work is designed especially for the student and practitioner of medicine, and treats the various articles of the Materia Medica from the point of view of the bedside, and not of the lecture-room. While thus endeavoring to give all practical information likely to be useful with respect to the selection and special application of special remedies in special cases, and the results to be anticipated from their administration, a copious Index of Diseases and their Remedies renders the work eminently fitted for reference by showing at a glance the different means which have been employed, and enabling the practitioner to extend his resources in difficult cases with all that the experience of the profession has suggested. At the same time particular care has been given to the subject of General Therapeutics, and to the measurement of each class of medicines there is a chapter devoted to the common influence upon morbid conditions. The action of remedial agents upon the healthy economy and on animals has likewise received particular notice, from the conviction that their physiological effects will afford frequent explanations of their pathological influence, and in many cases lead to new and important suggestions as to their practical use in disease. Within the scope thus designed by the author, no labor has been spared to detail, while all the facts which have accrued from the experience of the profession in all ages and all countries; and the vast amount of recent researches recorded in the periodical literature of both hemispheres has been zealously laid under contribution, resulting in a mass of practical information scarcely attempted hitherto in any similar work in the language.

Our expectations of the value of this work were based on the well-known reputation and character of the author as a man of scholarly attainments, an elegant writer, a refined and philosophical thinker; we knew that the task would be conscientiously performed, and that few, if any, among the distinguished medical teachers in this country are better qualified, and at the expense of a systematic treatise on therapeutics in accordance with the present requirements of medical science. Our preliminary examination of the work has satisfied us that we were not mistaken in our anticipations. In congratulating the author on the completion of the great labor which such a work involves, we are happy in expressing the conviction that its merits will receive that reward which is above all prized— the grateful appreciation of his medical brethren.—New Orleans Medical News, March, 1860.

We think this work will do much to obviate the reluctance to a thorough investigation of this branch of science, and to a gradual approach to a well-grounded philosophical thinker; we knew that the task would be conscientiously performed, and that few, if any, among the distinguished medical teachers in this country are better qualified, and at the expense of a systematic treatise on therapeutics in accordance with the present requirements of medical science. Our preliminary examination of the work has satisfied us that we were not mistaken in our anticipations. AN ANATOMICAL ATLAS, illustrating the Structure of the Human Body. In one volume, large imperial octavo, extra cloth, with about six hundred and fifty beautiful figures. $3 00.

These figures are well selected, and present a complete and accurate representation of that wonderful fabric, the human body. We must congratulate the student upon the completion of this Atlas, which renders it so peculiarly convenient for the student, and its superb artistical execution, have been already pointed out. We must congratulate the student upon the completion of this Atlas, as it is the most convenient work of the kind that has yet appeared; but we must add, the very beautiful manner in which it is got up is so creditable to the country as to be flattering to our national pride.—American Medical Journal.

ON BANDAGING AND OTHER OPERATIONS OF MINOR SURGERY. Second edition, enlarged. One handsome royal 12mo. vol., of nearly 400 pages, with 182 wood-cuts. Extra cloth, $1 40; leather, $1 50.

Sargent's Minor Surgery has always been popular, and deservedly so. It furnishes that knowledge of the most frequently requisite performances of surgical art which cannot be entirely understood by attending clinical lectures. The art of bandaging, which is regularly taught in Europe, is very frequently overlooked by teachers in this country; the student is regularly taught in Europe, is very frequently overlooking these matters in the daily practice of every physician, and the sound practical nature of Dr. Todd's writings, can hardly fail to attract to this work the general attention it merits.

MEDICAL JURISPRUDENCE. Fourth American Edition. With Notes and References to American Decisions, by Edward Hartshorne, M. D. In one large octavo volume, leather, of over seven hundred pages. $3 90. No work upon the subject can be put into the hands of students either of law or medicine which will engage them more closer or profitably; and none could be offered to the busy practitioner of either calling, for the purpose of casual or hasty reference, that would be more likely to afford the aid desired. We therefore recommend it as the best and safest manual for daily use.—American Journal of Medical Sciences.

BY THE SAME AUTHOR. (New Edition, just issued.)

ON POISONS, IN RELATION TO MEDICAL JURISPRUDENCE AND MEDICINE. Second American, from a second and revised London edition. In one large octavo volume, of 755 pages, leather. $3 50.

Since the first appearance of this work, the rapid advance of Chemistry has introduced into use many new substances which may become fatal through accident or design—while at the same time it has likewise generated new and more exact modes of counteracting or detecting those previously treated of. Mr. Taylor's position as the leading medical jurist of England, has during this period conferred on him extraordinary advantages in acquiring experience on these subjects, nearly all cases of moment being referred to him for examination, as an expert whose testimony is generally accepted as final. The results of his labors, therefore, as gathered together in this volume, carefully weighed and sifted, and presented in the clear and intelligible style for which he is noted, may be received as an acknowledged authority, and as a guide to be followed with implicit confidence.

It is not excess of praise to say that the volume before us is the very best treatise extant on Medical Jurisprudence. In saying this, we do not wish to be understood as detracting from the merits of the excellent works of Beek, Ryan, Traill, Duy, and others; but in interest and value we think it must be conceded that Taylor is superior to anything that has proceeded it.—N. W. Medical and Surg. Journal.
THE PHYSIOLOGICAL ANATOMY AND PHYSIOLOGY OF MAN. With the American physician who shall fail to read one of the most instructive and useful; its language terse and perspicuous.

Its completion has been thus long delayed, that the authors might secure accuracy by personal observation. — St. Louis Med. and Surg. Journal, Sept. '57.

Our notice, though it conveys but a very feeble and imperfect idea of the magnitude and importance of the work now under consideration, already transcends our limits; and, with the indulgence of our readers, and the hope that they will peruse the book for themselves, as we feel we can with confidence recommend it, we leave it in their hands. — The Northwestern Med. and Surg. Journal.

We know of no work on the subject of physiology so well adapted to the wants of the medical student.

It is more concise than Carpenter's Principles, and more modern than the accessible edition of Mfiller's Elements; its details are brief, but sufficient; its descriptions vivid; its illustrations exact and copious; and its language terse and perspicuous. — Charleston Med. Journal, July, 1857.

We know of no work on the subject of physiology so well adapted to the wants of the medical student.

TOYNBEE (JOSEPH), F. R. S.,
Aural Surgeon to, and Lecturer on Surgery at, St. Mary's Hospital.

A PRACTICAL TREATISE ON DISEASES OF THE EAR; their Diagnosis, Pathology, and Treatment. Illustrated with one hundred engravings on wood. In one very handsome octavo volume, extra cloth, $3 00. (Now Ready.)

Mr. Toynbee's name is too widely known as the highest authority on all matters connected with Aural Surgery and Medicine, to require special attention to be called to anything which he may communicate to the profession on the subject. Twenty years' labor devoted to the present work has embodied in it the results of an amount of experience and observation which perhaps no other living practitioner has enjoyed. It therefore cannot fail to prove a complete and trustworthy guide on all matters connected with this obscure and little known class of diseases, which so frequently embarrass the general practitioner.

The volume will be found thoroughly illustrated with a large number of original wood-engravings, elucidating the pathology of the organs of hearing, instruments, operations, &c., and in every respect it is one of the handsomest specimens of mechanical execution issued from the American press.

The following condensed synopsis of the contents will show the plan adopted by the author, and the completeness with which all departments of the subject are brought under consideration.

APPENDIX.

PRINCIPLES OF MEDICINE. An Elementary View of the Causes, Nature, Treatment, Diagnosis, and Prognosis of Disease; with brief remarks on Hygienics, or the preservation of health. A new American edition from the third and revised London edition. In one octavo volume, leather, of about 500 pages. $2 50. (Just Issued.)

We find that the deeply-interesting matter and style of this book have so far fascinated us, that we have unconsciously hung upon its pages, not too long, indeed, for our own profit, but longer than reviewers can be permitted to indulge. We leave the further analysis to the student and practitioner. Our judgment of the work has already been sufficiently expressed. It is a judgment of almost unqualified praise. — London Lancet.

LECTURES ON THE PRINCIPLES AND PRACTICE OF PHYSIC.

That the high reputation of this work might be fully maintained, the author has subjected it to a thorough revision; every portion has been examined with the aid of the most recent researches in pathology, and the results of modern investigations in both theoretical and practical subjects have been carefully weighed and embodied throughout its pages. The watchful scrutiny of the editor has likewise introduced whatever possesses immediate importance to the American physician in relation to diseases incident to our climate which are little known in England, as well as those diseases and affections to which this country is more exposed than England; or that have led to different modes of practice; and he has also added largely to the series of illustrations, believing that in this manner valuable assistance may be conveyed to the student in elucidating the text. The work will, therefore, be found thoroughly on a level with the most advanced state of medical science on both sides of the Atlantic.

The additions which the work has received are shown by the fact that notwithstanding an enlargement in the size of the page, more than two hundred additional pages have been necessary to accommodate the two large volumes of the London edition (which sells at ten dollars), within the compass of a single volume, and in its present form it contains the matter of at least three ordinary octavos. Believing it to be a work which should lie on the table of every physician, and be in the hands of every student, the publishers have put it at a price which will enable all, making it one of the cheapest books as yet presented to the American profession, while at the same time the beauty of its mechanical execution renders it an exceedingly attractive volume.

The fourth edition now appears, so carefully revised, as to add considerably to the value of a book already acknowledged, wherever the English language is read, to be beyond all comparison the best systematic work on the Principles and Practice of Physiology in the whole range of medical literature. Every lecture contains proof of the extreme anxiety of the author to keep pace with the advancing knowledge of the day, and to bring the results of the labors not only of physicians, but of chemists and histologists, before his readers, wherever they can be turned to useful account. And this is done with such a cordial appreciation of the merits of the industrious observer, such a generous desire to encourage younger and rising men, and such a candid acknowledgment of his own obligations to them, that one scarcely knows whether to admire most the pure, simple, forcible English—the vast amount of useful practical information condensed into the Lectures—or the manly, kind-hearted, unassuming character of the lecturer shining through his work.

Thus these admirable volumes come before the profession in their fourth edition, abounding in those distinguished attributes of moderation, judgment, erudition, truthfulness, and eloquence, with which they were from the first invested, but yet richer than before in the results of more prolonged observation and the able application of the latest advances in pathology and medicine by one of the most profound medical thinkers of the day.

LONDON LANCET, Nov. 14, 1857.

The lecturer's skill, his wisdom, his learning, are equalled by the ease of his graceful diction, his eloquence, and the far highest qualities of candor, of courtesy, of modesty, and of generous appreciation of merit in others. May he long remain to instruct us, and to enjoy, in the glorious sunset of his declining years, the honors, the confidence and love gained during his useful life.—N. A. Med.-Chir. Review, July, 1858.

Watson's unrivalled, perhaps unapproachable volume on Practice—the copious additions made to which (the fourth edition) have given it all the novelty and much of the interest of a new book.—Chemists and Physicians, July, 1858.

Lecturers, practitioners, and students of medicine will equally hail the reappearance of the work of Dr. Watson in the form of a new—fourth—edition. We merely do justice to our own feelings, and, we are sure, of the whole profession, if we thank him for having, in the trouble and turmoil of a large practice, made leisure to supply the hiatus caused by the exhaustion of the publisher's stock of the third edition, which has been severely felt for the last three years. For Dr. Watson has not merely caused the lectures to be reprinted, but scattered through the whole work we find additions or alterations which prove that the author has in every way sought to keep up his text in keeping with the most recent acquisitions in science.—Brit. and For. Medico-Chir. Review, Jan. 1859.

WALSH (W. H.), M. D.,
Professor of the Principles and Practice of Medicine in University College, London, &c.

The present edition has been carefully revised and much enlarged, and may be said in the main to be rewritten. Descriptions of the various affection, their causes and modes of production of the more important affections, so far as they possess direct practical significance, are succinctly inquired into; an effort has been made to bring the description of anatomical characters to the level of the wants of the practical physician; and the diagnosis and prognosis of each complaint are more completely considered. The sections on Treatment and the Appendix (concerning the influence of climate on pulmonary disorders), have, especially, been largely extended.—Author's Preface.

**. To be followed by a similar volume on Diseases of the Heart and Aorta.

WILSON (ERASMUS), F. A. S.
Lecturer on Anatomy, London.

THE DISSECTOR'S MANUAL; or, Practical and Surgical Anatomy. Third American, from the last revised and enlarged English edition. Modified and rearranged, by WALTER HUNT, M. D., Demonstrator of Anatomy in the University of Pennsylvania. In one large and handsome royal 12mo. volume, leather, of 589 pages, with 154 illustrations. $2 00.
A SYSTEM OF HUMAN ANATOMY, General and Special. A new and revised American, from the last and enlarged English Edition. Edited by W. H. Gowers, M.D., Professor of Anatomy in the Pennsylvania Medical College, &c. Illustrated with three hundred and ninety-seven engravings on wood. In one large and exquisitely printed octavo volume, of over 600 large pages; leather. §3 25.

The publishers trust that the well earned reputation so long enjoyed by this work will be more than maintained by the present edition. Besides a very thorough revision by the author, and the efforts of both have been directed to introducing everything which increased experience in its use has suggested as desirable to render it a complete text-book for those seeking to obtain or to renew an acquaintance with Human Anatomy. The amount of additions which it has thus received may be estimated from the fact that the present edition contains over one-fourth more matter than the last, requiring a smaller type and an enlarged page requisite to keep the volume within a convenient size. The author has not only thus added largely to the work, but he has also made alterations throughout, wherever there appeared the opportunity of improving the arrangement or style, so as to present every fact in its most appropriate manner, and to render the whole as clear and intelligible as possible. The editor has exercised the utmost caution to obtain entire accuracy in the delineation and perfect accuracy of illustration are concerned.—Medico-Chirurgical Review.

It may be recommended to the student as no less distinguished by its accuracy and clearness of description than by its typographical elegance. The wood-cuts are exquisite.—Brit. and For. Medical Journal.

An elegant edition of one of the most useful and accurate systems of anatomical science which has ever been issued from the press. The illustrations are really beautiful. In its style the work is extremely concise and intelligible. No one can possibly take up this volume without being struck with the great beauty of its mechanical execution, and the clearness of the descriptions which it contains in equally evident. Let students, by all means examine the claims of this work on their notice, before they purchase a text-book of the vitally important science which this volume so fully and easily unfolds.—Lancet.

We regard it as the best system now extant for students.—Western Lancet.

It therefore receives our highest commendation.—Southern Med. and Surg. Journal.

ON DISEASES OF THE SKIN. Fourth and enlarged American, from the last and improved London edition. In one large octavo volume, of 650 pages, extra cloth, §2 75.

The writings of Wilson, upon diseases of the skin, are by far the most scientific and practical that have ever been presented to the medical world on this subject. The present edition is a great improvement on all its predecessors. To dwell upon all the merits and high claims of the work before us, seriatim, would indeed be an agreeable service; it would be a matter of human knowledge to which one could freely offer, but we should thus occupy an undue amount of space in this Journal. We will, however, look at some of the more salient points with which it abounds, and which make it incomparably superior in excellence to all other treatises on the subject of dermatology. No mere speculative views are allowed a place in this volume, which, without a doubt, will, for a very long period, be acknowledged as the chief standard work on dermatology. The principles of an enlightened and rational therapeutics are introduced on every appropriate occasion.—Am. Jour. Med. Science, Oct. 1857.

Also, now ready, A SERIES OF PLATES ILLUSTRATING WILSON ON DISEASES OF THE SKIN; consisting of nineteen beautifully executed plates, of which twelve are exquisitely colored, presenting the Normal Anatomy and Pathology of the Skin, and containing accurate representations of about one hundred varieties of disease, most of them the size of nature. Price in cloth §4 25.

It is beauty of drawing and accuracy and finish of coloring these plates will be found equal to anything of the kind as yet issued in this country. The plates by which this edition is accompanied leave nothing to be desired, so far as excellence of delineation and perfect accuracy of illustration are concerned. They are colored with so much care that we could find fault with anything we have met with in point of delicacy and finish.—British and Foreign Medical Review.

We have already expressed our high appreciation of Mr. Wilson's treatise on Diseases of the Skin. The plates are comprised in a separate volume, which we counsel all those who possess the text to purchase. It is a beautiful specimen of color printing, and the representations of the various forms of skin disease are as faithful as is possible in plates of the size.—Boston Med. and Surg. Journal, April 8, 1858.

HEALTHY SKIN; A Popular Treatise on the Skin and Hair, their Preservation and Management. Second American, from the fourth London edition. One neat volume, royal 12mo., extra cloth, of about 300 pages, with numerous illustrations. §1 00; paper cover, 75 cents.

ON OBScURE DISEASES OF THE BRAIN AND DISORDERS OF THE MIND; their incipient Symptoms, Pathology, Diagnosis, Treatment, and Prophylaxis. In one handsome octavo volume, of nearly 500 pages. (Just Ready.) 3s 6d.

The momentous questions discussed in this volume have perhaps not hitherto been so ably and elaborately treated. Dr. Winslow’s distinguished reputation and long experience in everything relating to insanity invest his teachings with the highest authority, and in this carefully considered volume he has drawn upon the accumulated resources of a life of observation. His deductions are founded on a vast number of cases, the peculiarities of which are related in detail, rendering the work not only one of sound instruction, but of lively interest; the author’s main object being to point out the connection between mental troubles and organic disease, and tracing the latter through all its stages from mere eccentricity to mania, and urging the necessity of early measures of prophylaxis and appropriate treatment. A subject of greater importance to society at large could scarcely be named; while to the physician who may at any moment be called upon for interference in the most delicate relations of life, or for an opinion in a court of justice, a work like the present may be considered indispensable.

The treatment of the subject may be gathered from the following summary of the contents:—

CHAPTER I. Introduction.—II. Morbid Phenomena of Intelligence. III. Premorbid Symptoms of Insanity.—IV. Confessions of Patients after Recovery.—V. Stage of the Mind during Recovery.—VI. Anomalous and Masked Affections of the Mind.—VII. The Stage of Consciousness.—VIII. Stage of Exaltation.—IX. Stage of Mental Depression.—X. Stage of Aversion.—XI. Impairment of Mind.—XII. Morbid Phenomena of Memory.—XIII. Acute Disorders of Memory.—XIV. Chronic Affections of Memory.—XV. Perversion and Exaltation of Memory.—XVI. Psychology and Pathology of Memory.—XVII. Morbid Phenomena of Motion.—XIX. Morbid Phenomena of Speech.—XX. Morbid Phenomena of Vision.—XXI. Morbid Phenomena of Taste, Touch, Smell.—XXII. Morbid Phenomena of Sleep and Dreaming.—XXIII. Morbid Phenomena of Organic and Nutritive Life.—XXIV. General Principles of Pathology, Diagnosis, Treatment, and Prophylaxis.

We must now conclude this hastily written sketch with the confident assurance to our readers that the work will repay perusal. The conscientious, painstaking, practical physician is apparent on every page.—N. Y. Journal of Medicine, March, 1859.

We gladly recommend his Lectures as in the highest degree instructive to all who are interested in obstetric practices.—London Lancet.

We have to say of it, briefly and decidedly, that it is the best work on the subject in any language; and that it stamps Dr. West as the princeps of British obstetric authors.—Edinb. Med. Journ.

LECTURES ON THE DISEASES OF INFANCY AND CHILDHOOD.

Third American, from the fourth enlarged and improved London edition. In one handsome octavo volume, extra cloth, of about six hundred and fifty pages. $4 75.

The continued favor with which this work has been received has stimulated the author to render it in every respect more complete and more worthy the confidence of the profession. Containing nearly two hundred pages more than the last American edition, with several additional Lectures and a careful revision and enlargement of that formerly comprised in it, it can hardly fail to maintain its reputation as a clear and judicious text-book for the student, and a safe and reliable guide for the practitioner. The fact stated by the author that these Lectures “now embody the results of 900 observations and 288 post-mortem examinations made among nearly 30,000 children, who, during the past twenty years, have come to my care,” is sufficient to show their high practical value as the result of an amount of experience which few physicians enjoy.

The three former editions of the work now before us, have stood the author in the foremost rank of those physicians who have devoted special attention to the diseases of early life. We admit no analogy with this publication; but may refer the reader to some of the chapters to which the largest additions have been made—those on Diphtheria, Diarrhoea and of the Mind, and, in short, nearly a proof that the work is really a new edition; not a mere reprint. In its present shape it will be found of the greatest possible service to the duty of every-day practice of nine-tenths of the profession.—Med. Times and Gazette, London, Dec. 10, 1859.

All things considered, this book of Dr. West is a most satisfactory treatise in our language upon such modifications of morbid action and disease as are witnessed when we have to deal with infancy and childhood. It is a true and serious treatise, and entirely fitted to such disease as we are come within the province of the physician, and even with respect to these it is unequal as regards minuteness of consideration, and some diseases it omits to notice altogether. But those who know anything of the present condition of pediatrics will readily admit that it would be next to impossible to effect more, or effect it better, than the accoucheur of St. Bartholomew’s has done in a single volume. The lecture (XVI.) upon Diseases of the Mind in this series of admirable specimens of the value of the later information conveyed in the Lectures of Dr. Charles West.—London Lancet, Oct. 29, 1859.

Since the appearance of the first edition, above eleven years ago, the experience of the author has doubled; so that, whereas the lectures at first were founded largely upon the results of nine hundred observations, and two hundred and eighty-eight post-mortem examinations made among nearly fourteen thousand children, they now embody the results of nine hundred observations, and two hundred and thirty thousand children, who, during the past twenty years, have been under his care.—British Medical Journal, Oct. 1, 1859.
