ALUMNAE CALENDAR 1974 - 1975

September 10, 1974  Regular meeting
October 8, 1974    Regular meeting
November 12, 1974 Regular meeting
December 1974     Christmas Dinner
                 Time and place to be announced
January 14, 1975  Regular meeting
February 11, 1975 Regular meeting
March 11, 1975    Regular meeting
April 8, 1975     Annual meeting
May 3, 1975       Annual Luncheon
May 13, 1975      Regular meeting

All regular meetings will be held at Jefferson Hall, 11th & Locust Streets, Philadelphia. Meetings begin at 7:00 P.M. Room number posted in lobby.

THE PRESIDENT'S MESSAGE

Dear Alumna,

My pride in our Alumnae Association and all Jefferson Graduates is tremendous. I am so proud of being a part of such a fine group. The loyalty and cooperation from each one of you make the task of being president a lot easier.

One of the rewards of being president is presiding at the Annual Luncheon. It is always a pleasure to look out over the crowd and recognize so many familiar faces and to see the happy renewing of friendships. It is truly a good looking group.

This past year we have been involved in trying to get the Sesquicentennial Campaign off the ground. Although we are pleased with the response our nurses have made, it is still far from our goal. If you change your thinking, it is not too late to increase your contributions.

The Nursing Symposium presented by the College of Allied Health Sciences on Friday, May 3, 1974 at Jefferson Alumni Hall was excellent. It is hoped this will become a yearly project.

My sincere thanks to each of you for your help, because without it we would not have an Alumnae Association of which we can be so proud. Can we continue to count on you!

Sincerely yours,

Margaret Summers, Class of 1941
Just to think we are nearly five years into the 70's daily. The clock seems to tick faster and "tempus fugit" (for as it is humorously quoted, "tempus fugit"). Change keeps pace with time and we have said good-bye to the era of many of the things which some of us rather nostalgically seem to remember as the "good ole days".

Today, students may be married at any time during the program and live off campus. Maternity leave is granted. Of our 273 students, ten are married and two have children. In fact, one of our students expects to graduate next year about the time her daughter graduates from high school. Night duty is a thing of the past and relief for students is limited to four weeks under the supervision of an instructor.

Males have invaded the ranks — three in the current freshman class! It’s difficult not to refer to them as male students and simply refer to them as students, but we keep trying, and by the time they graduate, we hope to have made the adjustment. Speaking of adjustment, the admission of males has not caused any major curriculum changes.

Since we shortened the program to 33 months in 1970, no major curriculum changes have occurred. One major change on the horizon is the anticipated move from our present cramped, antiquated facilities (these have not changed, except for an occasional coat of paint, since the "good ole days"), to the glittering, roomy, renovated Health Sciences Center (Edison Building) at 9th and Sansom Streets. We expect to be housed there by the beginning of classes this September. For you to tour our new facilities, please remember our administrative offices will also be moving there in the near future.

Dr. Heckenberg reported that annual giving contributions are still increasing. You will be interested, and no doubt proud, to know that the visitors complimented the faculty for their recommendations with confidence, anticipate continuing NLN accreditation is now a reality. We have only to wait for the recommendations from the May meeting of the Board of Review. We wait for their recommendations with confidence, anticipate continuing NLN accreditation for the next six years at their maximum.

Our cheerleaders won their league title for the second consecutive year, in spite of the fact that one of the team had emergency surgery the week before the competition and could not participate, nor be replaced. That’s real Jefferson Spirit!

Most group activities are on the wane, as students prefer to "do their own thing", but one group activity does not seem to change — basketball. Although their league championship streak was broken this year (they finished in third place), the team won their third consecutive title in the Annual Thomas Jefferson Invitational Tournament, and their third consecutive victory at the Spectrum prior to the 76-ers game. It should be noted that in the last three years, our success at the Spectrum was better than that of the 76-ers, but we will not lend them our coach! Patricia Jones, 74, and Donna Ronieri, 75, two team members, had personal moments of glory when they won the Times — National Basketball Association free throw competition at the Spectrum and, with the local title, an all expense paid trip to the national competition in San Diego, in which they were less successful than on home ground. Patricia Jones was this year’s recipient of the Thomas Jefferson Award for athletic achievement, given by the School of Nursing Department of the Women’s Board, and presented by the coach at the basketball banquet.

Our cheerleaders won their league title for the second consecutive year, in spite of the fact that one of the team had emergency surgery the week before the competition and could not participate, nor be replaced. That’s real Jefferson Spirit!

After seven months of anticipation and preparation of the Report of Self-Evaluation, our routine visit (April 6-12, 1974), for continuing NLN accreditation is now history. We have only to wait for the recommendations from the May meeting of the Board of Review. We wait for their recommendations with confidence, anticipate continuing NLN accreditation for the next six years at their maximum.

We have only to wait for the recommendations from the May meeting of the Board of Review. We wait for their recommendations with confidence, anticipate continuing NLN accreditation for the next six years at their maximum. ANNUAL REPORT OF THE SCHOOL OF NURSING

FINANCIAL REPORT
December 31, 1973

Receipts:
Dues and Re-instatement of Members $ 6,320.00
Annual Luncheon Reservations 1,457.00
Interest on Savings Accounts 1,230.92
Miscellaneous 1,689.89
Annual Giving Contributions:
General Fund 4,366.00
Relief Fund 329.00
Scholarship Fund 531.00
Total Receipts $15,843.81

Disbursements:
Annual Luncheon Expenses $ 1,892.65
Printing, Mailing & Stationery 2,228.47
Sick Benefits for Members 100.00
Graduation Prizes 125.00
Contributions (United Fund, etc.) 325.00
Other Operating Expenses 3,300.98
Miscellaneous Expenses 265.00
Scholarships Granted 1,500.00
Gifts for Shut-Ins 10.38
Total Disbursements 9,827.38

Cash Balance as of December 31, 1973

General Fund $ 7,765.56
Savings Account 5,042.42
Relief Fund 19,075.93
Scholarship Fund 13,842.64

Total Cash Balance $45,726.55
ANNUAL REPORT OF THE
DEPARTMENT OF BACCALAUREATE NURSING
COLLEGE OF ALLIED HEALTH SCIENCES

Forty six students were admitted in the first class entering in September 1972. There will be 40 graduates receiving their Bachelor of Science in Nursing, in June, 1974. The fall 1974 class will number 65 men and women. Faculty has actively involved in curriculum planning throughout our existence both in preparing for the first group of students as well as in planning the ongoing curriculum. There has been student participation since their admission. We are making sincere efforts to prepare graduates who will be able to function effectively in today's world of health care as well as to prepare them for inevitable changes that will take place in the delivery of health care as they progress in their nursing careers. Emphasis is placed on the role of the nurse in the evolving health care system.

Many health care agencies in the Philadelphia area are being utilized to provide clinical laboratory experience in the nursing courses. These include Jefferson related hospitals and various types of neighborhood health agencies.

Charlotte E. Vass
Chairperson, Department of Baccalaureate Nursing

PROGRESS—THOMAS JEFFERSON UNIVERSITY

The last year has brought more changes and more plans for future changes emphasizing Jefferson's further growth and development.

Physical changes within the hospital have resulted in improved facilities for patient care. The newly constructed Intensive Care Nursery has provided modern facilities and equipment for the care of high risk infants, many of whom might not have survived without such support. Two operating rooms on the Sixth Floor, Pavilion have been renovated to provide more room for gynecological surgery. A second operating room on the Fourth Floor, Pavilion, which will provide care to the more disturbed patients.

Another problem in providing health care through-out the nation is the scarcity of family practitioners. Jefferson Medical College cognizant of this problem, has established a Department of Family Medicine under Dr. Paul C. Brucker. This summer a new three-year residency program in Family Medicine will begin at Jefferson. These physicians will be exposed to all phases of health care, preventive and curative, and will follow and treat patients in the hospital and on an out-patient basis. Junior medical students may take a six-week family medicine preceptorship which permits them to visit offices of family doctors in the Philadelphia area.

Over the past ten years, Thomas Jefferson University has been expanding its established tradition of serving the community. A Children and Youth Ambulatory Program for Comprehensive Child Care is located at Thirteenth and Finway Streets. A Mental Health Ambulatory Program has been functioning at Twelfth and Walnut Streets with satellite clinics in South Philadelphia. Emergency care at night and on weekends and hospitalization are available at Thomas Jefferson University Hospital in both programs.

The changes in physical facilities and new programs represent only a few of the steps Jefferson has been taking to provide patient care in both preventive and curative phases.

We know that you will be interested in keeping up to date with news of your Alma Mater and hope that the year to year will be a happy and prosperous year.

Mabel C. Prevost
Assistant Hospital Director

TRENDS IN NURSING AT
THOMAS JEFFERSON UNIVERSITY HOSPITAL

The Nursing Service Department at Thomas Jefferson University Hospital has for its primary objective to deliver quality patient care and provide a stimulating environment for student education. To achieve these objectives we continually evaluate our patient care programs and implement new programs when indicated.

The Cardiac Rehabilitation program is an example of this. Rehabilitation of the cardiac patient focuses on physical conditioning through a graded exercise program and on teaching and counseling the patient about diet, health habits, and performance of activities of daily living. The program's goal is to assist the individual to live a productive life, including early recognition of potential physical problems and maintenance of personal independence. Members of the Department of Rehabilitation Medicine, Cardiology and Nursing developed the program. Nursing plays a vital role in the program as they are responsible for teaching, providing emotional support, and observing the patient's response in increased activity. All aspects of the program begin while the patient is in C.C.U. Following discharge from C.C.U., the patient transfers to Rehab, where his exercise program is instituted. Physical Therapy, physicians and nurses on Rehab closely coordinate their efforts to insure that the individual patient progresses smoothly through his program. Patient and family teaching in preparation for discharge are done by the nurses from C.C.U. and Rehab. Plans are now being made to institute a home care program for these patients.

Primary Nursing Care

In the spring of 1973, a group of staff nurses expressed dissatisfaction with team nursing as a method of delivering care. They felt that team nursing did not allow them to develop an affective relationship with patients and families. This occurred because the team leader and team members were not always assigned to the same group of patients; and team leaders were responsible for eight hours, not Twenty-four hour care.

To resolve the problem expressed by the staff nurses, we looked for another method of delivering care. Primary Nursing is a method of delivering nursing care which is based on the principle that one nurse is responsible and accountable for the nursing care of a group of patients twenty-four hours a day, from admission until discharge. The major goal is to reduce fragmentation of care by providing the patient with one nurse who is totally responsible for his care.

The nurse's responsibility includes assessing the needs of patients, identifying nursing care problems, planning care, giving care, relating care needs to staff members on other shifts, currency of record. The primary nurse exercises her responsibility and account-

ability by counseling staff members on how to meet the needs of patients and by following up to see if care was given. When problems with care do occur, the primary nurse investigates why and implements a program to prevent its recurrence, i.e., education of staff.

Since June of 1973, Primary Nursing has been instituted on six nursing units. Plans are now being formulated to use this method of delivering care on all remaining units. On the units where primary care is used, patient satisfaction is much greater. Staff morale has improved. We believe this is because nurses are more involved with their patients and can see the effectiveness of their care.

Cardiac Rehabilitation and Primary Nursing are two examples of the changing focus in nursing at Jefferson. In essence, we are caring for individuals with complicated, long-term illnesses, and we are altering our approach to care to meet the needs of these patients. This implies teaching programs which help patient and family adjust to the illness. Diabetic classes and the ostomy teaching program are examples.

We also have a psychiatric nurse consultant who assists the staff in dealing with dying patients and with the emotional problems of very ill patients.

Nursing at Jefferson is dynamic. We have achieved much in the past decade, but there is much still to be done; Goals for the future include participating in an interdisciplinary approach to care, implementing a problem oriented medical record, and establishing a program of evaluating nursing care.

COLLEGE OF ALLIED HEALTH SCIENCES

SEQUENCIENial SYMPOSiUM

MAY 3, 1974

Plans in preparation for the celebration of the Sesquicentennial of Thomas Jefferson University have been in effect since 1973 with the appointment of a Steering Committee and a Themes Committee by Dr. Peter A. Harburt, President. Ideas for the celebration were explored and gradually a program for the year was developed. The resultant calendar for the year was widely distributed to all University faculty and personnel, and other institutions and schools.
We believe that it is a diversified program and that the history, the present activities of the University and future plans for "Century 21" will be illustrated through the programs during the year. Of particular interest to nursing, would be the program of the College of Allied Health Sciences. In planning this program, the Associate Dean and Chairmen of the three curricular programs, Medical Technology and Nursing, co-sponsored the symposium. The symposium, which was on Tuesday, February 6, was to be a three hour session and a large number of the participants attended. In all, the College of Allied Health Sciences Symposium discussed the three topics.

The first session, on Nursing, was presented by Dr. George McClellan, the founder of Jefferson Medical College, and its treated patients in an infirmary adjacent to the first medical college building on Prune Street (Louest Street). Since that time, patients have been continuously treated at Jefferson although it was not until 1877 that the formal "Jefferson Hospital" was built on the site of the present Thompson Building. Jefferson now has four buildings devoted to patient care—three of which are outdated and in some areas substandard. The fourth building is obtaining a modern perspective from three points of view was discussed first. The responsibilities of the audience to think about not only the past and the present but the future of nursing in these schools and the present and the future at Thomas Jefferson University voted to what is happening today at Thomas Jefferson University and the American Nurses Association, Dr. Barbara Schott, who is former editor and current contributing editor to the American Journal of Nursing and who will shortly be taking the position as the Director of the Department of Nursing at Temple College, in Connecticut and Dr. Hamlet Williams who is the Associate Dean for Research at the College of Nursing, University of Illinois, Evanston, presented a very stimulating talk and I am sure prompted the members of the audience to think carefully about the past and the present as well as the future of nursing in general and nursing in particular here at Jefferson. Another part of the morning program consisted of a participation of two School of Nursing graduates who are involved in other unique areas in nursing. The first is Miss Maureen Maguire who is Co-director of the Pediatric Nurse Practitioner program at the Johns Hopkins University Hospital and Miss O'Neill who has had a great deal of background in Nephrology Nursing at the Foerderer Pavilion in Jackson, Miss.; their descriptions of their activities and their impressions of the nursing contributions in these two areas were very interesting.

The afternoon of the Nursing symposium was devoted to what is happening today at Thomas Jefferson University Hospital. Several members of the nursing staff, some of whom are Alumnae of the School of Nursing, involved in other innovative activities in nursing were presented. We also had the opportunity to visit the Foerderer Pavilion and to see the nursing care of patients in this facility, and were presented with a very stimulating and interesting discussion of their responsibilities and gave the audience a picture of the innovativeness of the hospital nursing staff at the present time.

The events of the day evoked considerable discussion and participation from the audience.

The day was climaxd by a social hour at Jefferson Alumni Hall, a large number of the participants attended. All in all, the College of Allied Health Sciences Symposium discussed the three topics. When these plans are all planned each Alumni member will be notified and encouraged to attend.

The proposed Clinical Teaching Facility will support the defined goals of Thomas Jefferson University which are:

1. The education of medical and allied health personnel at undergraduate and graduate levels.
2. The provision of continuing education to practicing health professionals.
3. The maintenance of a rich environment for the continuing study of knowledge in the medical and allied health sciences. It will be our responsibility to think seriously of having similar programs periodically in the future. When these are planned each Alumnae member will be notified and encouraged to attend.

Clinical Teaching Facility will be an essential element of the University. It will not alone be a hospital or a hospital and some clinics, but rather it will be an educational and research facility which offers students and teachers alike an exemplary setting for the instruction of superior patient care and the education of many professionals who must work together throughout their careers. It will be, as well, a mutual resource for clinical research programs and an important health resource for the community it serves.

The gradual disappearance over the past several decades of the "clinic patient" from hospitals and the evidences of predictable predictable in the scope of ambulatory patient services has provided a significantly different environment for the clinical education of health professionals.

A multi-disciplinary structure for care and teaching designed around physiological systems will be provided rather than continuing the traditional fragmented typical hospital organization and physical structure of today. These systems will permit the concentration of responsibility, for delivering the ancillary services needed, for the provision of continuing rather than episodic care-orientation towards obtaining not only both personal and professional satisfaction for patients, teachers, students, and staff.

The Clinical Teaching Facility will be the result of a combination of the Foerderer Pavilion and a new building. The two will be bridged across Sansom Street at every level.

The new building, which will encompass the block between 10th and 11th Streets and Chestnut and Sansom Streets, will contain 400 beds and 110 physicians' offices. The major portion of diagnostic and therapeutic services will be provided in the southern half of the new building, and the in-patient programs in the Foerderer Pavilion and the northern half of the new building are designed to draw on these services at each respective level. Intensive Care Units will be provided on each level and will serve the patients in Foerderer Pavilion. Offices will be rented to staff and all ambulatory care on campus will be delivered in that setting.

The new building at ground level will be with a service entrance and a loading dock on Sansom Street. The space on street level will be rented to commercial activities. There will be a small convenience parking area at ground level.

The Foerderer Pavilion will be extensively re-modeled and will contain 185 beds which will be mostly for non-acute patient care such as Psychiatry, Extended Care, and Physical Medicine and Rehabilitation. In addition, the pediatrics, the obstetrical services, delivery rooms, and an enlarged and ex- panded Department of Clinical Laboratories will remain in this building. The Emergency Department, the Blood Bank, and a Pre-Kam Testing unit will occupy the entire floor of the Foerderer Pavilion.

The two buildings have been carefully planned so that the programs at each level of the combined structure will complement each other. An example of this will be on the 7th, 8th and 9th floors of the Foerderer Pavilion where the Extended Care, Physical Medicine and Rehabilitation, and Pediatric beds are housed respectively. Many of the patients occupying these beds will be transferred to the Foerderer Pavilion as their care needs change. Medical care and Rehabilitation modalities on the 9th floor of the new building and for services of physicians located on the 8th and 9th floors. There will be a constant flow of patients and services between the two buildings and among the buildings of the University.

When completed, the Clinical Teaching Facility will provide 585 beds for Jefferson (400 in the new building and 185 in the Foerderer Pavilion). It is a reduction of 85 beds from our present complement and will be permitted by utilizing a variety of economics such as the use of the rehabilitation program's in-patient units. After the Clinical Teaching Facility is completed and the other clinical departments of the hospital building is completed, we will share with the medical education and patient care will combine the delivery of patient and ambulatory care in one physical complex and will, therefore, significantly reduce the spoken economies in our teaching and in the delivery of patient care while permitting the delivery of primary, secondary, and tertiary care on the one hand.

The Clinical Teaching Facility will be the result of a combination of the Foerderer Pavilion and a new building. The two will be bridged across Sansom Street at every level.

The new building, which will encompass the city block between 10th and 11th Streets and Chestnut and Sansom Streets, will contain 400 beds and 110 physicians' offices. The major portion of diagnostic and therapeutic services will be provided in the southern half of the new building, and the in-patient programs in the Foerderer Pavilion and the northern half of the new building are designed to draw on these services at each respective level. Intensive Care Units will be provided on each level and will serve the patients in Foerderer Pavilion. Offices will be rented to staff and all ambulatory care on campus will be delivered in that setting.

The new building at ground level will be with a service entrance and a loading dock on Sansom Street. The space on street level will be rented to commercial activities. There will be a small convenience parking area at ground level.

When completed, the Clinical Teaching Facility will provide 585 beds for Jefferson (400 in the new building and 185 in the Foerderer Pavilion). It is a reduction of 85 beds from our present complement and will be permitted by utilizing a variety of economics such as the use of the rehabilitation program's in-patient units. After the Clinical Teaching Facility is completed and the other clinical departments of the hospital building is completed, we will share with the medical education and patient care will combine the delivery of patient and ambulatory care in one physical complex and will, therefore, significantly reduce the spoken economies in our teaching and in the delivery of patient care while permitting the delivery of primary, secondary, and tertiary care on the one hand.
As noted, the complex is being carefully designed to support our educational programs. It is the first student patient care center in our history in which every patient's care is being deliberately incorporated into the teaching programs of the colleges of the University. Small units are being developed at every nursing station for individualized student instruction. In larger conference rooms will be available on every nursing floor and in every department in the Clinical Teaching Facility. These will be available for larger groups of students, for seminars, and for other educational purposes. There will also be a conference and educational center in the basement of the Thompson Building. A capacity for educational television and individual programmed student instruction will be provided throughout the facility.

The cost of the Clinical Teaching Facility, including the renovation of the Foerdorier Pavilion, will be approximately $15,000,000. This program has been supported in its inception by the National March of Dimes, principally through the Philadelphia County Chapter. In more recent years the grants have extended from the Philadelphia Chapter to the statewide Chapter, the March of Dimes State Chapter of the March of Dimes as our work has encompassed a wider geographic area.

The chief function of medical genetics in clinical medicine is in the delivery of a medical service which is called genetic counseling. Genetic counseling is done by a genetic counselor who in the past has usually been a Ph.D. geneticist associated with a university or a medical school, but more recently is very likely to be a physician who has studied primarily in other internal medicine, pediatrics or obstetrics and gynecology. These clinical branches of medicine deal most closely, along with the family practitioners, with the problems of inherited diseases as they present in the patients. When the genetic counselor thinks of a patient he usually thinks not only of a single individual, but of that individual's relatives, in other words the entire family.

Genetic counseling consists of ascertaining the risk to a family for the occurrence or recurrence of a specific genetic disease and then communicating that risk to the family together with the means for dealing with the risk and the occurrence of genetic disease. The emphasis in this discussion must be on the communication aspect of the process. Actually, this discussion passes all of the traditional clinical maneuvers of the medical practitioner which can generally be broken down into three categories: the family's history, the physical examination and the genetic diagnosis. The question of risk or occurrence or recurrence of a specific genetic disease is initially passed by the discovery somewhere in a family tree of an individual with a genetic disease or with an unusual gene. In the past this has always been the case in genetic counseling, and is an individual with the genetic disease, but as screening techniques for discovering carriers of genetic disease become more feasible we will begin to deal more and more actively with the discovery of normal persons who carry unusual genes in the absence of a patient with a genetic disease. Obviously this is a very frustrating birth in a child. The presence of genetic disease is one of the most difficult problems in medicine. There is the X-linked disease called hemophilia which the woman carries a gene on one of her two X chromosomes and is asymptomatic. When she has children, if the son has the disease the mother may not be carrying an unusual gene or the other X chromosome to her son. This is balanced by the contribution of a Y chromosome from the father. The result is a disorder of the disease for example hemophilia. Thus one half of her sons by chance may be affected.

Fortunately, there are tests to detect carriers of several serious disorders. For example, a simple blood test performed before the birth of children so that they may know if both members of a couple are carriers of this gene and they are therefore at risk to bear children afflicted with this disease. Discovery of an asymptomatic carrier of a genetic disease allows them to make a choice about dealing with this problem before they experience the tragedy of bearing a child afflicted by this disease. For example, hemophilia. For this program has reached over 10,000 persons in the Delaware Valley in approximately 16 carrier couples have been discovered by this and 6 of these have been successfully helped through pregnancies to have a normal healthy child where they would otherwise be the subject of an extremely high probability of having an affected child.

In fact when one learns to look at the clinical condition more closely or to measure small differences one finds that there are separate diseases caused by separate genes. This can frequently have a great deal of significance in the patient because different genetic diseases may pursue different clinical courses. For example, the disease known as cystic fibrosis is most frequently inherited in a recessive manner, but in the other diseases it is inherited in a more complex and possibly more severe manner. Consequently, the diagnosis of a specific genetic problem is the key to all of the management which follows. Diagnosis of genetic disease can frequently be difficult because of a phenomenon termed genetic heterogeneity. This literally means that several genes occurring in genetically different individuals can be expected to appear in the same clinical condition.
This is accomplished through a series of satellite clinics in the eastern part of Pennsylvania and the southern and central portions of New Jersey. These satellite clinics are conducted under the sponsorship of the National Foundation March of Dimes program and are usually conducted in affiliated medical institutions within the community. One or more of the genetic counseling center staff physicians attend the clinics together with house officers or students from Jefferson. Some of the physicians who participate in this program are Dr. Leonard Peris of the Department of OB/GYN, Dr. Gary Carpenter of the Department of Pediatrics, Dr. Susan Cowethock of the Department of Internal Medicine, and Dr. Leonard Reisman of the Department of Pathology. The clinics themselves are conducted on a once-monthly basis, usually for one half a day. Physicians are seen by appointment and given thorough clinical evaluations plus testing for any chromosomal or biochemical phenomenon that seem appropriate. Blood or other materials are collected for such testing at the satellite center, but the laboratory work is done at Jefferson. At follow-up visits the patients are counseled or started into management programs appropriate to their problem. Usually clinicians from the affiliated institution or house officers or nurses participate in these programs so that a great deal of postgraduate education occurs in an informal and very effective sense. These clinics are conducted at the Crozer-Chester Medical Center in Chester, Pa.; Our Lady of Lourdes in Camden, N. J.; Peter's General Hospital in New Brunswick, N. J.; St. Luke's Hospital of Bethlehem, Pa.; the Allentown Hospital of Allentown, Pa.; Community Medical Center in Scranton, Pa.; Kirby Health Center in Wilkes-Barre, Pa.; St. Joseph's Hospital in Hoboken, N. J.; the Reading Hospital in Reading, Pa.; the Doylestown Hospital in Doylestown, Pa.; the Hamburg State School in Hum­ burg, Pa.; and the Elizabeth State Hospital for Crippled Children in Elizabethtown, Pa. All together some 800 to 1,000 patients are seen every year in this new and active service which we hope is helpful in demonstrating how new and innovative medical services can be brought out of the medical center and into the community with great effectiveness.

Lauri Jackson, M.D.
Director, Division of Medical Genetics
Thomas Jefferson University

LAURI JACKSON, M.D.

THE JEFFERSON BREAST DIAGNOSTIC CENTER PROGRAM

Though it may be hard to believe, about 85,000 new cases of breast cancer will be discovered this year in the United States. These cancers will occur, for the most part, in the 33,000,000 or so women in the risk age group. The tragedy is that nearly 90% of these cancers will be found by the woman herself, and over 69% of these will be noticed at an advanced stage. Such cancers probably have been growing for eight to ten years prior to detection. Thus we have the problem of detecting at the earliest possible time the 9,000 cancers in the breasts of 33,000,000 women. This parallels the problem faced by the Pap test.

Currently there are three distinctly different techniques which can be used clinically for breast detection. The physical examination of the breast probably dates back at least to the early Egyptians, and its effectiveness is to a large measure dependent on the skill of the examiner. The second technique is a special X-ray examination of the breasts using special films, low kilovoltage and often special X-ray tubes. This is called mammography, and is a technique which has had universal usage for the past fifteen or more years. Mammography, when performed by a skilled radiologist, is capable of detecting cancers well before they can be clinically palpated. The third technique involves the taking of hundreds of thousands of temperature measurements of the skin of the breasts. These measurements are then presented as a temperature picture in which the blacker the image the higher the temperature. Thermography, as this new technique is called, has been shown to be especially sensitive to very early subclinical cancers.

Here at Jefferson the physical examination of the breasts has probably been routinely practiced since its founding. Mammography was first introduced in the Department of Radiology in the early 1960's by Dr. G. D. Dodd. Thermography was first introduced in conjunction with mammography in mid-1964 by Professor J. D. Wallace, and was established on a routine procedure two years later, thus making Jefferson one of the pioneering centers in the clinical application of both mammography and thermography.

Many institutions have now established mammography as a routine study, and their experience has demonstrated the effectiveness of mammography in early detection. When mammography delineates a small cancer in a breast, which by physical examination has been found clinically free of disease, such cancers are generally very small in size. Such patients have a much lower incidence of regional lymph node involvement. An example of the effectiveness of mammography is found in a recent study of 30,000 women in which mammography and a physical examination of the breasts were utilized. One third of all the cancers discovered in these women were found by mammography alone. These cancers would have been missed had mammography not been performed. This study also demonstrated that a reduction of one third was achieved in the mortality rate from breast cancer in a five year follow-up period demonstrating that earlier detection is highly beneficial to the woman herself. The practical problem of screening 33,000,000 women each year is huge. If one were to employ mammography in a company building screening then each of the approximately 10,000 practicing radiologists would have to be brought in specific for a quarter of his work day reading these special films. The problem then is to find some technique which can provide for the woman's time, which population will accept that population with whom the incidence is indeed very high. This is the role of the physical examination of the breast, and it is this role which we hope thermography will play in carcinoma of the breast.

If one reviews the reported experience using thermography for breast cancer detection, one finds that in 38,350 reported cases there were 2,236,259 analyses. Of these, 1919 were thermographically suspicious—an accuracy rate for cancer of about 86%. How does this compare with other procedures? The National Cancer Institute has reported a reported cancer rate of about 90%, as do the examinations for carcinoma of the esophagus and already there is a preference that thermography might meet the requirements and need for a screening technique.

This is the question which the National Cancer Institute has asked the Jefferson Medical College to answer. The Breast Diagnostic Center is the result of a contract between the Jefferson Medical College and the National Cancer Institute. The Jefferson program will run for five years. It is the brainchild of its Director, Professor J. D. Wallace, who is Research Professor of Radiology. The Center is under the direction of Professor of Radiology, of which Jack Elicker, M.D., of the Center is a cooperative effort involving several of the clinical departments: Surgery, Medicine, Pathology, Family Medicine, and Community Health and Preventive Medicine at Jefferson, as well as the Medical Department of the Bell Telephone Company of Pennsylvania.

The plan is to enlist 20,000 volunteer women between the ages of 45 and 64, who have had no previous evidence of breast cancer. New member women will be admitted to the program at the rate of 5,000 the first year, which is now near completion, 10,000 the second year, and 5,000 the third year. We estimate that about 85% of these examined will be asked to return in two years, and will be sent a status questionnaire two years after their second examination. The remaining 15% will for the most part be asked to return in 6 months. The results of the examinations will be sent only to the physician designated by the woman. In the event that she does not have a regular physician we will suggest the Jefferson Department of Family Medicine who, according to her preference, will either act as her physician, or will assist her in contacting a physician in her neighborhood.

The examinations are now being made at two centers. The Jefferson Center is presently in the base­ ment of the Curtis Clinic and is expected to move into specially designed quarters on the third floor of the Health Sciences Building on the corner of Ninth and Sansom Streets. The second center is located on the second floor of the Jefferson Center at 1 Parkway. The Jefferson Center has been in operation since early December 1973 and the Bell Center started operations this past March.

In order to conserve the woman's time, all screening is done by appointment and can be reliably expected to take three quarters of an hour. Appointments can be made by calling (215) 455-2000, or by writing to where we have three telephone lines. Ms. Joan Franco, who is the Admin­istrator, will be happy to arrange for groups, as she recently did for 32 women who chartered a bus and travelled here from Wilkes-Barre. All appointments will be confirmed by letter.

When the woman arrives at the Center the receptionist will check with you as to the accuracy of the informa­ tion received over the phone. She will also ask you for the name, address and phone number of a close friend whom we could contact if in the future we are not able to contact you. Finally, the receptionist will ask you the name and address of the physician to whom you wish the report sent. Of course we shall
also send you a report within about a week of the screening.

The next step is a specialized history concerned with the breasts. This history is in the form of a mark-sense sheet, on which you block in the squares for your answers. It is exactly the same type which is used for the several college board examinations.

You will then be given a colorful bag, and asked to step into a "cooling" booth where you will be requested to disrobe to the waist, putting your belongings into a bag, and asked to sit with hands on your hips for 7 minutes. The cooling process is really not very cold, since the temperature will be between 68° and 70°. The cooling does two things. It erases the skin's thermal memory of your clothes and it reduces the normal blood supply to the skin, but has little effect on an abnormal blood supply. After 7 minutes of "cooling" you will be asked to move, with hands still on your hips, to a seat in the thermographic room. The thermogram will be taken in three views: AP and the two obliques. Incidentally, as with normal photography, in thermography you provide the signal from your skin, so there is no radiation such as X-rays involved.

Once the thermogram is finished, you might ask the technician to sit in the chair and let you look into the viewing hood on the thermographic unit so you can see what her face looks like. You will then be given a package containing a wrap-around gown. These come in several colors. The same technician will then take you into the mammography room, where she will take two views of each breast. You might be interested in the fact that we do not use film, but rather special Xerox plates in place of the film. If you ask the technician she will show you some examples of this technique.

When the mammogram has been taken the same technician will weigh you, measure your height, and then introduce you to the physician who will examine your breasts clinically. You will hear the physician call out the findings to the technician, as she records them. If you have any questions, be sure to ask the physician.

The technician will then take you to a dressing booth. Once dressed, you can give your history form to the receptionist, and you are then a co-investigator in this project, having made your unique contribution. It's simple, painless, and vitally important!

Behind the scenes, things are buzzing. When you made your appointment the information was immediately put into our computer at the Stein Research Center. The computer then generated the confirmation letter to you, and on the day before your appointment it provided Ms. Franco with a listing of the next day's appointments at each of the two centers. The additional information you gave the receptionist was also put into the computer. The history form, together with the clinical examination forms, were taken to Stein in the afternoon and the computer automatically read these forms and stored all this information. While this was going on your thermograms are read separately by two thermographers. If there is any disagreement the films are read by a third thermographer. At the same time, the mammograms are read in the same way by the radiologists. All readings are reported by each reader on a report form like your history form and are also read into the computer. The computer then puts together all the information concerning you, and in most cases generates a letter to you and another to your physician, reporting normal findings. In instances where there is suspicion of an abnormality, but no direct evidence, letters to this effect are generated, one reviewed against the actual file and films, and are sent out asking you to plan to come back in for a checkup in six months. There are many benign conditions which can produce suspicion so don't be overly concerned if you are asked to come back in six months. Finally, if either the mammograms or the clinical examination leads the physician to recommend a biopsy, special letters will be written. Your physician will be personally contacted by phone by the Center physician, and the findings discussed.

Our hope and expectation is that we, that is, all of us, will find those cancers at such an early stage that they will have little or no effect on the woman's future life. If together we can achieve this, then the techniques will be reviewed to see what combination of these three types of examinations is most effective. The program will then be made available not only to our 52,000 women, but also to the 33,000,000 other women who need such an examination, as well as to generations to come.

The program is as much yours as ours—for only with your cooperation can we get the answers which have been needed for so long.

Finally, since the program is funded by the National Cancer Institute, the examinations are free for the calling. What we need are concerned and understanding women who will make their unique contribution and keep in contact with us for five years.

As nurses, you know at first hand the importance of bringing effective early detection of breast cancer to all of our people as well as to ourselves. By joining the program you can help yourself as well as contribute to the health of future generations.

Don't worry about where you live. We have already had women come in from Pittsburgh. A group of women chartered a bus in Wilkes-Barre, came down, and not only had a good time shopping and seeing the sights, but also joined the program. It only takes a telephone call to (212) 829-8350. Ms. Franco can arrange for two of you, or for larger groups. You can become an important part of our joint effort to bring about early detection of breast cancer.

Jefferson graduates between ages 45 and 64 may be eligible and welcome to participate in this health maintenance program.
COMMITTEE REPORTS

SOCIAL
On December 11, 1973 the Christmas party was held in the Faculty Club of Jefferson Alumni Hall. Following the dinner Santa (Mary Ann Stauffer) made her annual visit and presented each member and guest a gift.

On March 12, 1974 the Alumni had its annual dinner and auction sale. Proceeds from the sale were placed in the General Fund.

The main event of the year was the Spring Luncheon held May 4, 1974 in the Crystal Ballroom of the Benjamin Franklin Hotel. There were 346 in attendance.

The graduating class of 1974 were guests of the Association. There were 29 members present. Class President, Miss Cheryl James was presented with a corsage.

The guests at the Head Table were:
- Miss Doris Bowman, Director of the School of Nursing
- Dr. Charlotte Voss, Chairman, Department of Baccalaureate Degree Nursing
- Miss Elizabeth Sweeney, Director of the School of Practical Nursing
- Mrs. Mamie Peace, Director of the Operating Room
- Miss Carol Hutelman, Acting Director of Nursing Service

The 50th Anniversary class was the guests of the Association. Present were: Lillian Pratt, Veronica Owen, Julia Ganster, Estelle Taylor, Blanche Mcguigan.

Flowers were presented to the following Alumni:
- Miss Mary Godfrey — 65th Anniversary
- Miss Elizabeth Heaton — Class of 1915
- Miss Nanne Tolley — Class of 1918
- Mrs. Elizabeth Miller — Class of 1921
- Mrs. Ann Craver — Class of 1921
- Miss Clara Brunner — Class of 1923

The class of 1947 had 34 members present for their 25th anniversary, this was the largest anniversary class.

The flowers at the head table were given to Wanda Edgele Kinsey, Class of 1947, who was hospitalized on the day of the Luncheon.

The social committee wishes to thank all members for their continued support and assistance in making the social events a success.

The Annual Spring Luncheon for 1975 will be held May 3, 1975 at the Benjamin Franklin Hotel.

Janet Hindson, '50
Chairman

MEMBERSHIP
On January 11, 1974, the senior class was appraised of the functions, structure and by-laws of the Alumni Association. Copies of the Alumni Association Bulletin and Constitution and By-Laws were also given to the students at this time.

In meeting with the students on April 18, 1974 the senior class completed membership forms for entry into the Alumni Association upon graduation. The class was also invited as guests to the Annual Luncheon on May 4, 1974. Thirty members accepted the invitation as guests of the Association.

Deidre Watkins Blank, '67
Chairman

SICK AND WELFARE
During this past year there were many alumnae members hospitalized at Thomas Jefferson University Hospital. Cards were sent and visits made to all known members.

Jeanette Plasterer, '51
Chairman

BULLETIN
Thank you to all contributors to the 1974 Bulletin. Special thanks must go to Peg Summers, Martha Bil- land, and Delores Heckenberger whose help made compilation a rewarding experience. One noteworthy contribution is the extensive class news of the class of 1934 upon their 40th anniversary.

I hope the 1974 Bulletin will renew your interest in Jefferson and rekindle relationships with your classmates.

Lenora Schwartz, '66
Chairman
ADMINISTRATION

The Alumnae Room has been as busy as a beehive the past year. Besides sending out Alumnae material, we have been involved in addressing envelopes for the activities and the information of the University. There have been programs of interest to nurses and there will be more programs in the future.

Please send your new addresses when moving, also change of name, so you will be on the active mailing file.

I am in the Alumnae Room on Tuesdays, 10 to 4, of each week. The Alumnae Room is on the Mezzanine Floor of Jefferson Hall, 11th and Locust Street, Room M-2. Telephone No. 829-8981.

Martha E. Riland, Clerk-Typist

Note of interest. From 1893 to 1974, there have been 4176 Graduates from the School of Nursing.

MISSING ALUMNAE MEMBERS

Help us find the correct addresses for the following: The letters for the annual giving and luncheon invitations sent March 1974 were returned to the Alumnae Office — marked moved — no forwarding address.

MODEL SHOWING SITE OF NEW CLINICAL TEACHING FACILITY
RESUME OF MINUTES OF
ALUMNAE ASSOCIATION MEETINGS

September 11, 1973
A motion was made, seconded and carried to re- commend to Miss Bowman and her committee to reissue the Fall scholarship to Janice Osterhaus.
Miss Bowman reported that there have been two applications for scholarships. It was moved and seconded to award scholarships for the Fall semester to Peggy Eckhart Hess and to Betty Bilbrough Alexy.

November 13, 1973
The Alumni Association held a meeting to decide the fate of the February scholarship. It was moved, seconded, and carried to award the scholarship to Judy Johnson.

February 12, 1974
Miss Hindson reported that the annual supper and auction will be held March 12 in the Faculty Club in Jefferson Hall.

April 9, 1974
There were 28 reservations with 25 in attendance. The annual supper and auction was held March 12 in the Faculty Club in Jefferson Hall.

May 14, 1974
It was moved and seconded to accept the recommendations of the Scholarship Committee to grant scholarships for the Fall semester to Peggy Eckhart Hess and to Betty Bilbrough Alexy.

The weather man in our town, His name I'll now call Brown. He used to own a scruffy farm, Is two miles out of town.
Now Brown when he came home that night, Was drunk, of course A strange freak too, He harnessed up his horse.

A motion was made and carried that the President will be the representative of the Association.

A motion was made and carried that the Board of Directors conduct any emergency business which may arise between May and September.

All of the regular meetings of the Alumnae Association were held in room A23 of the Jefferson Alumni Hall.

Respectfully submitted,
Lenora W. Schwartz
Recording Secretary

January 8, 1974
Miss Hindson reported that the Christmas party was a huge success with 44 persons in attendance.

The following ballot was approved:
President—Peg Summers
2nd Vice-President—Delores Heckenberger
Evelyn Frazier
Board of Directors—Denise Watkins Blank
Catherine Mikata
LuAnn Miller
Evelyn Dute

Mrs. Schulte, a speech therapist, showed a very interesting film about the world of the aphasic and conducted a question and answer period.

February 12, 1974
Miss Hindson reported that the annual supper and auction will be held March 12 in the Faculty Club in Jefferson Hall.

Mrs. O'Connors reported that much more effort is needed in order to reach our Sesquicentennial campaign commitment.

It was announced that the Breast Diagnostic Center survey is open to all Jefferson graduates. This is a good opportunity for health maintenance.

An interesting and informative program was then presented by Mrs. Margaret Reddy—a stoma therapist.

April 9, 1974
There were 28 reservations with 25 in attendance. The annual supper and auction was held March 12 in the Faculty Club in Jefferson Hall.

May 14, 1974
It was moved and seconded to accept the recommendations of the Scholarship Committee to grant scholarships for the Fall semester to Peggy Eckhart Hess and to Betty Bilbrough Alexy.

The weather man in our town, His name I'll now call Brown. He used to own a scruffy farm, Is two miles out of town.
Now Brown when he came home that night, Was drunk, of course A strange freak too, He harnessed up his horse.

A motion was made and carried to send Lenora Schwartz to the ANA Convention as the representative of the Association.

A motion was made and carried that the President and the Board of Directors conduct any emergency business which may arise between May and September.

All of the regular meetings of the Alumnae Association were held in room A23 of the Jefferson Alumni Hall.

Respectfully submitted,
Lenora W. Schwartz
Recording Secretary

WAYS AND MEANS COMMITTEE REPORT
May 15, 1973 - May 15, 1974

Thank you once again for your continued support and your generous giving to your Alumnae Association. The contributions to the Relief Fund, Scholarship and General Fund brought the total amount to $5,053.00. All contributions received after May 15, 1974 will be acknowledged in the Alumnae Bulletin for 1975. Following is a list of contributors and contributions according to classes.

1909 - $15.00
Mary E. Godfrey

1914 - $40.00
Marguerite G. Barnett Elsie B. Haring Martha M. Kepp

1915 - $20.00
Martha Turner Elizabeth Heaton

1917 - $13.00
Frances M. Coope

1919 - $10.00
Nina Dreyer Hilda Gels

1920 - $45.00
Anna Timps Ann DeKort Bertha Utrup

1921 - $70.00
Frances Platt Henrietta Stansbury Mussie Spence Ellyn Moult Elizabeth Briggs

1922 - $40.00
Grace Toupin

1923 - $120.00
Rosaline Ruffin Cleo Codd and Jesse S. Reed

1924 - $37.00
Estella Taylor Myrtle Popk Ullin Pratt Julia Gustav Kathryn Task Luella Kuhn

1925 - $90.00
Mildred Chiuiski Edith Ogden Nora Fry Elizabeth Scuttin Cleo Luchsinger Muriel Briggs

1926 - $50.00
Muriel Overkirk Edith Ogden Anna Phillips Florence Blaylock Anna Williams Eliza S. Rowe Ruth DeLay Josephine Dickenson

1927 - $80.00
Isobella Hardy Margaret Casey Madge Ridlon Anne Phillips Filomena Gubco Pauline Gillian Lorraine Alger

1928 - $125.00

CLASS NEWS

1969—Mary Gordon Godfrey. Our General Manager, Mrs. Pauline Colson, graduated Cornell University in 1963. Rehired to manage the Doctor Office Services of Breite Air-Fone Base, Canal Zone Panama.

1971—Amelia Dixon, 1761 Delaware, Detroit, Mich. 48240. I worked in room 105 in Buffalo, N.Y. for 35 years, after three days I retired. I am leaving Buffalo for three years. I have lost only one tooth in 50 years.

1973—Hershel Strout Reed, 5820 Ohio Ave., Alcoa, Pa. 1950. She was a 1909 Grad., A 1941 Grad., and Four grandchildren. He is an outstanding executive with Medallion Lynch in Wausau, Wisc. He is currently enjoying his present position.

1979—S. Elizabeth Nopp-Adams, 26, Haltly, Del., 1953. I am retired and working without a dream. I worked for an employer and is without need.

1981—Martha Beekley Clark, 4026 Springbank Pike, Pittsburgh, Pa. 15251. Am living with my daughter. Go to work for St. Margaret Medical Center at St. Margaret's Hospital and mother of three children. My husband is 93 and loves to do charity and is member of the Woman's Club of Winterset Town.

1984—Margaret Blew, 175 Sth St., Altoona, Pa. 16601. I retired from Off Synovis Inc., October 1, 1971. They gave me a lovely party and I set up for 2 years of service. There, I hope to get in some travel but this gas shortage has me on the road and I will come back. I have retired from teaching 3 years ago. We just had a marriage of 70 years, I have a beautiful garden in the back yard. So she will be free to be there is most of the summer. The real reason I can't make the function and is very spoilt by my pet dog. She has a heart block condition and requires medication twice a day and one can imagine how long I have been with one of the few of us that she has been very closely followed. She followed me around carefully and took in the way that I may all allow to give her medicines and she has her. These two hands at once with the leg and legs and I will go on the right leg. Sally has to go on both. The pole for me and maybe I will be able to make it some other time.

1985—Margaret Laubchi, 9909 Grand Ave., Dawsonville, Ga. 30536. I was with 20 years we were married are 35 years of service. We were in the Navy and was back in the Navy, and we were in the Navy and was back in the Navy. She has been in the Navy and was back in the Navy and was back in the Navy.

1986—Margaret Lawrence, 2551 5th Street, Stone Harbor, N.J. 08247. Enjoying retirement. Keep busy. Daughters laff, graduated high school, and her job, but will not try to give her the job. She is working in the Navy and was back in the Navy, and we were in the Navy and was back in the Navy and was back in the Navy.

1988—Margaret Blew, 175 Sth St., Altoona, Pa. 16601. I retired from Off Synovis Inc., October 1, 1971. They gave me a lovely party and I set up for 2 years of service. There, I hope to get in some travel but this gas shortage has me on the road and I will come back. I have retired from teaching 3 years ago. we keep going. Give my best regard to Psychiatry leaving Saturday, February 23rd.
a boy and a girl. They are coming this weekend and we expect to go to the South Pacific. Expect to go to Africa next year.
any way that I can't be present for the function. This year it sounds like it would love to be with you all, however, we won't be coming up nor until
ruary 18th. Everyone is fine. Best wishes for a great return.
Dennis Cerny, Winners, Pa., 07042.
we have a new one. As far as I know, I am picking up some if I can get a job.
cheerful Miller, Main Street, Woodstock, N.H., 03868.
Aiko Emoto Branson, 304 Morton Ave., Rutland, Vt., 05701.
the past few years have been interesting and busy. We have enjoyed ourselves and have been to California several times; my husband will retire from the Fridley Federal Credit Union in the spring, after 46 years with the bank.
work one or two days a month. Ruth Dunfee and Howard Brammer, Box 287, Sadsburyville, Pa., 17051.
away every winter, God willing. The weather was beautiful and fine for golf. Expect to go lunch on April 26th.
summer and it is always good to get home. My husband and I plan to attend the soldiers tour.
Mildred Dore Estrada, 5 West Cardiff Rd., Catherine D'Espinosi Klein, 731 Cypress
Sure to keep very busy.
Kathryn Hassett Snider, 7 North Church St., Ephrata, Pa., 17522.
Your letter of February 10th, 1972, was received.
we are spending two weeks in Hawaii beginning February 25th. I am celebrating two anniversaries this year. It is my 40th year in my hospital and the 40th Anniversary of a Graduate and Alumna of Jefferson.
the past few weeks; I am feeling you are missing us on my new island home and intend to be able to play at the club the first of March. I am working in the position of Home Care Coordinator and Utilization Manager
Dorothy Rubelehuber, 19 Valley Rd., Drexel Hill, Pa., 19026.
Ruth Eichner Frederick, Woodburn Court, Westend Ave., Allentown, Pa., 18103.
Mary Lou Kimmel, 28 Cottam's Parkwy, Summit, N.J., 07901.
Margaret Mariano, 376 S. Selden St., Philadelphia, Pa., 19117.
Tosserine Marie Zebr, deceased 1957.
Mead Matlin, 1015 Walnut St., Columbus, Ohio, 43212.
Marguerite Moore O'ne, R. B., Bridgeport, N.C., 02930.
Mildred Myers Smith, 1209 Atlantic Ave., New Brunswick, N.J., 08905.
As far as I know, I have been very interested in Japan, and, in my leisure time, I teach Japanese to some of the N. Carolina youth. I am the fourth (1972) that I attended an ophthalmology and taught at the Good Samaritan Hospital in St. Petersburg, Florida. I made connections through an international organization of youth programs that I had been to Japan. I attended two seminars, one with the Lutheran Church and taught at the Food Commission and the Lutheran Church.
I did not go to Japan last year because I have a Japanese grandson, Betty, who was visiting me with her husband.
I am working on his S.M. at the Philadelphia Lutheran Seminary. My daughter, Jennifer, has followed me in her desire to travel. Last spring she went on a seminar to Africa, and has been very interested in the Orient instead of the Orient.
Please give my best regards to your family and me.
Helen Harvey Duncan, 322 Walnut St., Hollidaysburg, Pa., 16648.
Morton Harrison Burd, 41-47th Ave, Long Island, N.Y., 11049. There is nothing new with us except John will re-tire in February, 1973. We have been to the South Pacific. We intend to plan the 40th celebration.
Anne Hastings Flingham, 8475 Virg St., Deerfield, Mich., 48120.
Verna Harold Oshin, R.F.D., Box 3, Little, Pa., 17534. I am still working in the office, and I am married, six grandchildren, one son in Washington who is a lawyer.
Ruth Myers Peterson—Deceased January 9, 1951.
Rico Orner Kinsey, Jr., 830 Cibby St., Ewen, Pa., 18324.
Elise Rickard James, 300 W 40th St, Shadowide, Ohio, 43478. We have just returned from Vanves, Florida. We had been there for two months. We are glad in our time in travel and it is always good to get home. My husband and I plan to attend the soldiers tour.
Ruth Spencer Durche, 200 W 40th St., Shadowide, Ohio, 43478. We have just returned from Vanves, Florida. We had been there for two months. We are glad in our time in travel and it is always good to get home. My husband and I plan to attend the soldiers tour.
Elizabeth Taylor Davison, 1100 Grandma Lane Blvd., Lancaster, Pa., 17960.
Julie Tyler McCord, 522 Reever Blvd., Marion Station, Pa., 19505. Dr. Nelson retired three years ago and so did I. Now we are both retired and enjoying life. Golf has been mostly my past time during the winter.
Dorothy Raubenhold, 19 Milam St., Hollidaysburg, Pa., 16648.
Margaret Mariano, 376 S. Selden St., Philadelphia, Pa., 19117.
Kathryn Hassett Snider, 7 North Church St., Ephrata, Pa., 17522.
Morgan Hoffman Miller, 42 Westford Terrace, Roselle, N.J., 07203. I have retired from my Community Hospital and do not allow her to be with us. Best wishes Marjorie.
Eve Ionghpn Greenlee, 306 W. 45th St., Murray, Pa., 17755.
Francis Kenneth Jefferson, 3511 Beacon Ht Dr., Mclennan, Mass., 01754.
Kathryn Haydel, 3930 E. State Hwy., Jacksonville, Fla., 32207.
Dorothy Rubelehuber, 19 Valley Rd., Drexel Hill, Pa., 19026.
Ruth Eichner Frederick, Woodburn Court, Westend Ave., Allentown, Pa., 18103.
Mildred Dore Estrada, 5 West Cardiff Rd., Orange City, N.J., 07320. We have enjoyed ourselves.
Julie Tyler McCord, 522 Reever Blvd., Marion Station, Pa., 19505. Dr. Nelson retired three years ago and so did I. Now we are both retired and enjoying life. Golf has been mostly my past time during the winter.

CLASS ADDRESS LISTS
Class address lists will be available from the Alumnae Office Clerk-Typist, at a charge of $2.00 per list. Enclose a long, self addressed, stamped envelope.

ALUMNAE BULLETIN
The Alumnae Bulletin will be sent automatically to all Association members. Individuals who are not Association members may obtain a copy of the Bulletin upon request, at a cost of $3.00 per copy. An order form will be mailed to all graduates in the Spring of 1975.

MAIDEN NAME—YEAR OF GRADUATION
Whenever you have occasion to write to your Alumnae Association, please use your first name, maiden name, then married name and the year you graduated.
Example: Janice Smith Greene—1972.
Mrs. John Green makes it very difficult for the Association to locate your card in the files. You are urged to notify the Secretary of the Alumnae Association of any corrections, marriages, deaths or changes of address. Please help us keep errors at a minimum, and our files accurate.

CAP CHARMS
Jefferson cap charms are available in sterling silver and 14 carat gold. For information, please write Betty Pieters or Margaret Summers, 1002 Spruce Street, Phila., Pa. 19107.

ALUMNAE DAY-FIRST SATURDAY IN MAY

CAPS
Jefferson caps may be purchased from the Marvin-Neitzel Corporation, 2016 Fifth Avenue, Troy, New York 12181. (C. D. Williams & Company was purchased by Marvin-Neitzel). The minimum order is for three caps at a cost of $1.50 each, plus a fifty cents postage and handling charge. Identification may be obtained by directing correspondence to the Director, School of Nursing, Thomas Jefferson University, 11th and Walnut Streets, Philadelphia, Pa. 19107.

PINS
Jefferson pins may be purchased at J. E. Caldwell and Company, Chestnut and Juniper Streets, Philadelphia, Pa. 19107. Identification may be obtained by directing correspondence to the Director, School of Nursing, Thomas Jefferson University, 11th and Walnut Streets, Philadelphia, Pa. 19107.

TRANSCRIPTS
All requests for transcripts should be submitted in writing to the Director, School of Nursing, Thomas Jefferson University, 11th and Walnut Streets, Phila., Pa. 19107. Requests should be submitted at least a month prior to the date needed. There is a $2.00 fee for each transcript. Checks should be made payable to School of Nursing, Thomas Jefferson University.
