SCIENCE AND THE ART.

BY

CHARLES D. MEIGS, M.D.,

THIRD EDITION, REVISED.

WITH ONE HUNDRED AND TWENTY-NINE ILLUSTRATIONS.

PHILADELPHIA:
BLANCHARD AND LEA.
1856.
Entered according to the Act of Congress, in the year 1849, by
LEA AND BLANCHARD,
in the Office of the Clerk of the District Court of the United States in and for the
Eastern District of Pennsylvania.

PHILADELPHIA:
T. K. AND P. G. COLLINS, PRINTERS.
TO THE

EMINENT WESTERN PHYSICIAN,

PHILOSOPHER,

GENTLEMAN, AND SCHOLAR,

DANIEL DRAKE, M.D.,

OF

CINCINNATI.
I have endeavored to fulfil the intention expressed in the last paragraph of the preface to the second edition of my work. I trust that my readers will find I have made some amendments in the style, and that I have brought the subject up to the latest dates of real improvements in our art and science.

Charles D. Meigs,
324 Walnut Street.

October, 1856.
PREFACE TO THE SECOND EDITION.

The first edition of my work, though a large one, being exhausted, I have now the pleasure to offer to my medical brethren in America, a new one, considerably augmented as to the text, and which I have endeavored to improve by recasting some parts, by cancelling others, and by an earnest attention to improvements in the literary execution of the whole.

I shall not here specify all the changes that I have made in preparing this second edition, for the reader will be the most competent judge of them; and it is for him alone to decide, whether my labor shall prove serviceable in the object we should all lay to heart, of extending further and wider the usefulness of our calling amongst the people.

It may not be out of place, however, to say that, besides the relation of new cases, the recasting of my remarks on Cyanosis, and many fuller explanations of motives in practice, I have substituted for the former chapter on Puerperal Fever, a new chapter under the head of Childbed Fever. In that chapter, I trust, I shall be found to have made somewhat more clear and intelligible, the views that I deem most important upon the nature, seats, causes, and treatment of that disorder; and that I have, also, set forth with sufficient clearness, the motives that have long impelled me to reject the doctrine of its contagiousness. If only this part of my work should be favorably received by my brethren, I shall ever consider that I have, in it, done an acceptable service.

Lastly, I feel most grateful for the kind reception heretofore given, in this country, to my contributions to medical literature, and most thankfully acknowledge my obligation to improve them as opportunity arises; but this sentiment is blended with regrets, that, amidst the agitations, the distractions, and the fatigue of a physician's life, less time is allowed me for revision than is demanded by the many demerits of all that I have hitherto written.

CHARLES D. MEIGS,
324 Walnut Street.

April 3, 1852.
A LETTER.

MY DEAR SIR:

Having taken the liberty to inscribe this work with your name, which I never pronounce without a feeling of affectionate respect, I desire to say a few words to you in explanation of my views and wishes in regard to the volume.

You may haply be aware that I caused to be printed, some years since, a small volume, entitled the "Philadelphia Practice of Midwifery:" a second edition in octavo form, and somewhat enlarged and amended, has now been for a considerable time exhausted; and although I have had proposals to publish a third edition of the Treatise, it has not been convenient for me to undertake the labor until the early part of the past summer.

Upon completing my arrangements with the Publishers, and commencing the task, I was induced to recast and rewrite a great part of the work; in which I did not wholly reject the fruits of my studies in earlier years. This Treatise is, however, so different from the former, that I conclude I have a just right to present it to you as a new one; and accordingly have adopted a new title, as you will have seen.

I have addressed it to the Student, and it is to him that I speak in every page. This I have done because I was not to presume to instruct those who know as well, or perhaps better than I, every point of duty appertaining to the vocation of the accoucheur, both as to the Science and the Art. I was well aware that there are many of my brethren in this country who publicly relate their experience, and explain the rationale of all the Art and Science of Obstetricy to large classes in our numerous medical schools; and I had no pretensions to know more upon these subjects than they, nor to instruct them. Induced by these views, I have been, perhaps, too elementary in some parts of the work, and addressed the Student only; but I hope it will be found that the explanations I have given may serve to remove difficulties
from the track of the Medical Student, while they may perhaps lend facilities to the progress of the young and not much experienced practitioner. I thought that young accoucheurs, who, in the distant and thinly settled parts of the country, might require a consultation where time and opportunity would not allow of it, could find herein some needful counsel and explanation, and that it would be for me a great happiness to be useful in such emergencies. Hence I have entered into many particulars, and even trivials, that are not commonly set down in the books.

As to the scientific part of the work, I may say that I hope it will be useful to the Student. If I have succeeded in exhibiting just views in that department, my labor cannot be without fruit; since it is only by such means that the vocation of the Surgeon-accoucheur can become an elevated one. It is the Science of the practitioner that raises him immeasurably above the most dextrous midwives of the land, dexterity which indeed does not prevent their ignorance from rendering them unsafe depositories of such important interests as those that concern the conservation of our wives and daughters, and their little children. An accoucheur who is merely dextrous, and who is not acquainted with the scientific parts of his profession, may be in a manner superior to the midwife, but in some regards he is inferior; since to his employment, his sex is an objection, which ought to be waived only in consideration of his Scholarship.

I have in all this treatise endeavored, upon suitable occasions, to inculcate good motives.—Good and pure motives are very essential to the honorable estimation of this department of Medicine and Surgery.—I believe that the sentiments of good Monsieur Viardel, on these points, are quite just, and I shall take leave to cite the following fragments from his book at page 261. M. Viardel, who was in full practice at Paris about 1670, in speaking of the Accoucheur, says:—

"Il doit être propre dans ses habits, mais toutes fois vêtu modeste-ment, et non en fanfaron; * * * * * * * il doit, de plus, être doux dans ses paroles, et agréable dans sa conversation; * * * * * mais surtout, il doit être prudent et discret: prudent à dresser son prognostic, et à prévoir ce qui doit arriver, de peur de n’encourir le blâme des assistans. Il doit être discret, et ne point révéler le secret qu’on lui aura confié. * * * * En un mot, il doit être patient pour ne pas se rébutter, humain et charitable, surtout envers les pauvres, et n’agir pas dans son travail pour le lucre et son intérêt propre, mais comme dit l’Apôtre, pour l’honneur et la gloire de Dieu et pour conserver sa réputation parmi le monde."
Like all books, mine has some iterations; but I thought that to make my pages useful, it was inevitable to repeat statements; without which, I could not inscribe the why and the how on the same pages. If this is fit to be a book of consultation, it will be more useful for this fault. Hippocrates says that art is long; still, I think that, to repeat, is really to abbreviate; for the η δε τεχνη μακρη, and the η δε κρισες χαλεπη, both vanish under a clear and comprehensible delineation of the Why and the How for every special occasion.

I think you will find that I have in this book given a very clear relation of the new doctrines of menstruation, and that I have shown the Student the whole history and progress of the discovery of the mammiferous ovulum, from the time of the detection of the germinal vesicle by the Breslau professor, down to the last, most complete and admirable exposition of the whole subject by M. Coste, of the College of France. If this part of my publication is full and clear, I cannot doubt of its being advantageous. If I have done but this, and no more, I shall look confidently for useful results to my labor. For I know that multitudes of the younger class of my medical brethren, and especially of those that still belong to the Student-class, were formerly grossly neglected as to their instruction in these particulars. No one should be sent forth with a diploma certifying his acquaintance with all the branches of Medicine, whose therapeutical course, while uninformed on the questions referred to, could not but be a mere succession of conjectures and blunders rather than the sure steps of a learned and accurate reasoner.

Apologetically, I pray the reader may know that the labor of this writing and publishing, added to my professional vocations, has been so severe as seriously to affect my health—to that degree, indeed, that I have been compelled to finish it by the assistance of an amanuensis, who has written at my dictation, and read the proof-sheets. I have not dared to examine the proofs of the last 250 pages, on account of a distressing neuralgia of the eyes, which has also prevented me from reading any book or considerable pamphlet since the autumn.

It may be that I ought to solicit from my American brethren, a favorable acceptance of this work, the fruit of many years of painful toil in the acquisition of clinical experience and knowledge. I abstain from doing so, not because I desire not such acceptance, but only upon the certain conviction I have, that the book is no longer mine—and that, in going forth from my hands, it hath found many owners, each of whom will and ought to treat it as may seem good in his own sight.
As for you, my dear friend, I invoke your favorable construction of my design and action in publishing this treatise; and I pray you to believe that I am, with the greatest sincerity, your most obedient and most faithful servant, and attached friend,

CHARLES D. MEIGS.

PHILADELPHIA, Feb. 1849.

To DR. DRAKE,

Prof. of the Pract. of Med., Univ. of Louisville, Ken.
PART I.

ANATOMY OF THE PARTS CONCERNED IN REPRODUCTION.

CHAPTER I.

OF THE PELVIS.

37 The pelvis.
38 Etymology of pelvis.
39 Fig. 1. The female pelvis. Fig. 2. Pelvis bisected; showing the excavation.
40 Fig. 3. Pelvis bisected; shows pubal arch, planes of ischia, and symphysis pubis. The ilio-pectineal ridge.
41 Fig. 4. Shape of superior strait, with diameters. Fig. 5. Perineal strait, with diameters.
42 Margin; brim; superior strait. Inclination of pelvis. Fig. 6. Plan shows inclination of strait.
43 Superior strait explained.
44 Number of pieces in a pelvis. Os sacrum. Fig. 7. Sacrum of embryo.
45 Development of sacrum. Fig. 8. Os sacrum. Division of sacrum.
46 Fig. 9. Sacro-vertebral angle, or promontory. Columnar body of sacrum. Wings of sacrum.
47 Wings of the sacrum. Arrest of development of wing causes oblique ovate pelvis. Fig. 10. Oblique pelvis in Jefferson College Museum. Nægelé, Gurlt, and Hohl on oblique pelvis.
48 Sacral foramina and nerves. Cases of cramp from pressure on sacral nerves.
50 Pressure of head on sacral plexus. Os coccygis.
CHAPTER II.

MECHANICAL INFLUENCE OF THE PELVIS.—OF THE MECHANISM OF LABOR AS DEPENDENT ON THE RELATIONS OF THE CHILD'S FORM TO THAT OF THE PELVIS.

69 Sir Fielding Ould's Treatise on Midwifery promulgates doctrine of rotation of head in 1748. Extract from Ould.
70 A vertex presentation defined.
71 Child enters pelvis diagonally. Fig. 20. Vertex presenting in 1st position.
73 Fig. 21. Evolution of head by Extension. Restitution. Delivery of shoulders.
74 Flexion; Rotation; Extension; Restitution. 2d Position, its mechanism. Fig. 22. Vertex in 2d position.
75 3d and 4th Positions.
76 Fig. 23. 4th Position. Fig. 24. 6th Position. Mechanism of delivery in 6th position. Vertex first born.
77 Fig. 25. Vertex in 5th Position; 6th Position. A case of labor in 6th position.
CHAPTER III.

OF THE CHILD'S HEAD AND OTHER PRESENTING PARTS.

81 Volume of fetal head. Fig. 28. Fetal head.
82 Bones of cranium. Fig. 29. Crown of head with sutures. Fig. 30. Profile of fetal head from camera. Mobility of cranial bones.
83 Measurements of cranium by author.
84 Dimensions of head. Fontanelles.
85 Presentations.
86 Fig. 31. Presentation of vertex—the child wholly in flexion.
87 Average size and weight of fetus. Ratio of cephalic to pelvic presentations.
88 Two presentations only in midwifery—cephalic and pelvic. Fig. 32. The head deviated, allows the hand to prolapse, and causes shoulder presentation.
89 Fig. 33. Shows pelvic presentation that might become footling. Position of a presentation. Position defined.
90 Table of all Presentations and Positions.

CHAPTER IV.

THE EXTERNAL ORGANS.

91 Pudenda.
92 Labia pudendorum. Edema labii.
93 Thrombus labii: treatment of thrombus.
94 Labial abscess.
95 Nymphæ.
96 The vestibulum; catheterism; cohesion of labia.
100 The Clitoris.
101 The Bulbs of the vestibule and the Pars intermedia. Kobelt's figures.
102 Fig. 34. Kobelt's magnified view of clitoris.
103 Fig. 35. Front view of the bulbs. Fig. 36. Side view of bulbs.
104 Case to show that wounds of pars intermedia are dangerous.
105 Duverney's glands. Huguier quoted.
107 The vagina.
108 Structure and form of vagina.
Dimensions of vagina. Dr. Tyler Smith's paper noticed. Anterior and posterior columns of the vagina.

In retroversion, the anterior columna becomes permanently contracted or shortened. Utero-sacral ligaments.

Vaginitis contracts the tube. The womb—shape and size.

Fig. 37. Ovaries, womb, and vagina. Fig. 38. Womb opened.

Womb supported by its ligaments. Structure and powers of womb.

Fig. 39. Muscles of womb.

Non-co-ordinate action of the womb in labors.

Dilatation of the os. Number of the pains. Involution of the womb.

CHAPTER V.

THE OVARIES.

Graafian vesicles.

De Graaf.

Prof. Coste.

Fig. 44. Coste's ovarium.

Rudolph Wagner's account of the ovule, Fig. 45. Burdach on tubular ovaries.

The corpus luteum, Fig. 46.

Literature of the corpus luteum. Author's view of the vitellary nature of the corpus luteum.

Extract from Coste on vitellary nature of corpus luteum.

PART II.

THE PHYSIOLOGY OF REPRODUCTION.

CHAPTER VI.

MENSTRUATION.

Menstrual fluid is blood, not a secretion. Corpuscles or blood-disks which are solids, cannot be secreted.

Analysis of menstrual fluid.

At what period of the menstruation the vesicle opens.

Fig. 47, the womb and ovaries in Menstruation.

Fecundation possible during more than eight days. Jewish observances.

Old doctrines of menstruation.

Menstruation is ovulation. Menses, as to pregnancy and suckling.
CONTENTS.

PAGE
154 Pouchet's opinion as to the twelfth day.
155 When conception is possible.
156 Absence of womb cause of amenorrhœa. Cases.

CHAPTER VII.

AMENORRHŒA.

161 Influence of blood's crasis on menses.
164 Case showing that anæmia does not always prevent menstruation. Power of chalybeates in amenorrhœa.
166 Atresia causes amenorrhœa; also torpor of womb, and constitutional disorders.
169 Author's views of the Hæmatosis. The Endangium, or blood-membrane.
171 The endangium makes the blood.
175 Quévenne and Miquelard's iron. Debreiul's.
176 Diet in Amenorrhœa.

CHAPTER VIII.

PREGNANCY.

179 Definition.
180 Fecundation.
181 Conception.
183 Records of Menstruations in a series.
184 Fecundation takes place in the oviduct.
185 Decidua. Fig. 48. Hunter's schematic figure of decidua.
186 Fig. 49. Velpeau's figure of a decidua.
187 Prof. Coste's Atlas. Fig. 50. Tubular-mucous-membrane of womb. Coste quoted.
190 Fig. 51. Uterus of didelphis. Fig. 52. Ovary of didelphis.
191 Is a decidua possible in solidungula, pachydermata, and cetacea? Embryogenic processes.
193 Cervix uteri contains the facultas retentrix: corpus and fundus contain the facultas expultrix.
194 Double cervix and os of Delphinus. Evolution-process of womb.
196 Symptoms observed in early pregnancy. Falling of the womb. Nausea.
198 Quickening.
199 Form of the belly. Pouting navel.
201 Cylindrical cervix becomes conoidal. Size of womb at term.
202 Placenta. Development of heart and vessels in embryo.
206 Fig. 53. Schematic figure of conception. Fig. 54. Ovule affixed.
207 Weber's opinion of placental attachment.
PART III.
THE THERAPEUTICS AND SURGERY OF MIDWIFERY.

CHAPTER IX.
LABOR.

PAGE
287 Duties of the accoucheur. Al Mamun and John. Extract from Wigand.
289 Definition of labor. "Labor is the process by which the contents of the gravid womb are expelled." Onset of labor at term.
290 Cause of labor, with Baudeloque's theory of it.
292 Subsidence of the womb before labor.
293 Discharges from the genitalia. Labor pains; their number, duration, and the average time consumed in labor.
294 Saccombe's relation of a labor case.
296 Women cannot bear down in the beginning of labors.
297 Fig. 76. The womb dilated and become cylindric.
298 Constitutional effects of the pains. Signs of labor.
300 Touching or examination.
302 False pains.
303 Wigand's description of labor-pain.
307 In a labor pain the whole womb contracts.
309 The child during the labor. Outward thrust of the spinal arch which causes increased flexion of the head.
311 Positions are relations of a cardinal point of the presenting part, to a cardinal point on the pelvis. They are numerical, as 1st, 2d, 3d, 4th, 5th, 6th. Fig. 77. The vertex in 1st position.
313 Nægèle's opinion as to 1st and 4th positions.
314 Mechanism of the head and pelvis. Sketch of a labor.
318 The lochia.

CHAPTER X.
CONDUCT OF A LABOR.

320 Midwifery is the conduct of labor.
321 Importance of diagnosis. Raynalde's advice.
323 The pulse in labors. Cases. Uses of venesection.
324 The bowels to be attended to: purgative doses. A case.
326 Decubitus of patient. Case.
327 To assist the flexion and rotation.
329 Vaginal vesicocele. Case.
331 Management of cervix and os.
PAGE

332 Bad sacrum. Badly formed pubis.
333 The perineum. Rules to manage it.
335 Cord round the neck.
336 The shoulders, how managed. How to treat the child. Cutting the cord.
337 Management of the placenta.
340 Adherent placenta, or hour-glass contraction.
342 Womb after delivery. After-pains with cases illustrative.
347 Sitting up too soon.
348 The heart-clot. Dr. Sims's letter to Dr. Clarke, p. 351.
356 Heart-clot. Dr. Yardley's case.
359 Tampon never.
360 Turn out the clot. The binder. Dr. White's (of Manchester) opinion on binder, and Dr. A. F. Hohl's.
362 Diet of lying-in woman. Suckling.
363 Medicines for lying-in woman.
364 Lochia. Etherization in midwifery practice.
368 Letter on anaesthesia in midwifery, from Prof. Simpson.
370 Formula of Duncan and Flockhart, of Edinburgh, for chloroform.
371 Author's reply to Prof. Simpson.

CHAPTER XI.

FACE PRESENTATIONS.

377 Fig. 78. Presentation of face. 1st position.
379 Fig. 79. Departure of chin in a cephalic, with foot presentation. Fig. 80. Chin rotated to pubis, in a face presentation.
380 Fig. 81. Chin slides down behind pubis to emerge. Fig. 82. Chin born, and returning to breast from which it had departed.
381 Fig. 83. Face labor with forehead to pubis.
382 Causes of face presentations.
387 Fig. 84. Chin to sacrum in face-labor. Extract from Dr. Dewees. Cases.
392 Mesdames Lachapelle and Boivin's experience in face-cases.

CHAPTER XII.

PRESENTATIONS OF PELVIC EXTREMITY OF FOETUS.

398 Fatalities in breech-cases.
399 Diagnosis.
400 Not to bring the feet down. Rules of conduct for such a labor.
402 Positions of the breech. Fig. 85. Flexion of the trunk in descending.
Fig. 91, from Ecker's Icones Physiologicm, represents the tubuli uriniferi. Tests of albumen.

CHAPTER XIII.
OF PRETERNATURAL LABORS.

403 Fig. 86, shows the manœuvre as to the cord. First position of a pelvic presentation. Rules of conduct. Take care of the head.

405 Second position. Third position. Cases to show that a forceps should always be at hand in the cases.

CONTENTS.

403 Fig. 86, shows the manœuvre as to the cord. First position of a pelvic presentation. Rules of conduct. Take care of the head.

405 Second position. Third position. Cases to show that a forceps should always be at hand in the cases.

CHAPTER XIII.
OF PRETERNATURAL LABORS.

412 Causes. Case.
415 Two shoulder presentations for each shoulder. Fig. 88. Right shoulder with prolapsed arm.
416 Diagnosis of shoulder cases. Turning; with rules of conduct.
424 Spontaneous evolution, in shoulder-cases.
427 Double-headed child to illustrate evolution: also, Fig. 90, Rohrer's case—impossible but with evolution. Case of forced evolution.
429 Hemorrhagic labor.
430 Louise Bourgeois, method of, breaking the ovum. Extract from Louise. Rule is to let the womb contract, which cannot be done until the ovum bursts.
432 Placenta praevia.
438 Simpson, Radford's method in placenta praevia not to be adopted.
439 Barnes and Murphey; a discussion on placenta praevia.
441 Braun's colpeurynter. Recommended in the cases.
442 Concealed hemorrhage. Case.
443 Post-partum hemorrhagè.
445 Hour-glass contraction.
448 Flooding after delivery. Napkins. Dr. James's rule.
450 Always turn out the clot. Mauriceau's sister.
458 Blackall and Bright's researches on albuminuria.
459 Gourbeyre's paper in Mem. Imp. Acad. of Med. of Paris, shows that albuminuria is disalbumination of the blood.
460 Dr. Lever's researches on Bright's disease of pregnant women.
461 Idea of uremic intoxication, now prevalent.
462 Inquiry into the causes of albuminuria of pregnancy or uremia of women with child. Uremic intoxication or eclampsia. Casts of the tubuli uriniferi. Tests of albumen.
463 What is albuminuria? Frerich's opinion.
464 Fig. 91, from Ecker's Icones Physiologicm, represents the tubuli uriniferi, Bowman's capsules and Malpighi's corpuscles; to illustrate hyperaemia of kidney, or first stage of morbus Brightii.
CHAPTER XIV.

PRETERNATURAL LABOR FROM DEFORMED PELVIS.

517 Fig. 109. Nægèle’s oblique ovate, and Fig. 110. author’s oblique ovate pelvis.
518 Fig. 111. Pelvis, figure-8 shaped. Fig. 112. Egyptian girl’s pelvis.
519 Malformation of sacrum, pubes, and ischia in Fig. 113.
521 Fig. 114. Malformation of pubis, lessening antero-posterior diameter.
522 Fig. 115. Mensuration of a diameter. Fig. 116. Calliper of Baudelocque.
525 Fig. 117. Bladder below the head arrests the progress of labor.
526 Laceration of womb and vagina. Vide supplement at end for Bayne’s case of Gastrotomy, page 750.
CHAPTER XV.

OF THE FORCEPS.

Rainalde's advice to "put in hookes and suche other instrumentes to plucke it out withall."

Celsus' Uncus.

Desideratum of centuries, supplied by Chamberlen in his Child's-instrument.

Hugh Chamberlen at Paris. His preface to Mauriceau.

Figs. 118, 119, 120, 121, 122, represent different instruments formerly belonging to the Chamberlens, and now in the Museum of College of Surgeons, London.

Fig. 123. Professor Huston's Siebold forceps. Fig. 124. Davis's forceps applied. Davis's forceps described and recommended.

The perforator, the crotchet, and the Caesarian section for the mother; and the forceps for the child.

Lever-power of the forceps.

Baudelocque's experiments on compressive action of forceps.

A man shall hardly be justified who inserts his forceps within the os uteri. He must wait until it has risen above the head and disappears.

To apply the forceps and deliver.

Demonstration of lever-motion and power of the forceps. Before rotation is completed.

Forceps in occipito-posterior position.

Forceps in transverse head.

The forceps in face cases.

Forceps in locked head.

Forceps in pelvic-presentation.

Section of the pubis. Sigault.

CHAPTER XVI.

EMBRYOTOMY.

Signs of exhaustion. To lessen the head.

Head not to be delivered with pelvis 2½ inches.

Dangerous nature of crotchet.

Deformed pelvis. Mrs. R.'s case.

Figs. 126, 127, 128. Author's embryotomy instruments.

Deformed pelvis. Caesarean operation.
CONTENTS.

CHAPTER XVII.
INDUCTION OF PREMATURE LABOR.
