The HopeBox is an aircraft delivered care package that includes essential survival items and serves as a waterproof safebox to create a feeling of security and safety for refugees. It is designed to be adaptive to the needs of the disaster. For this prototype, we have designed the care package for hurricane relief.

Features:
- Combination lock located inside box for safebox feature
- IOT location device
- Designed for parachute attachment which can later be used for securing the box
- Instructions printed on exterior and interior of box for safety, use of the box, and contents
- Compact size for lightweight ease of travel
- Designed to float on water
- Designed to holdpersonal items safely

A website will be put into place so that donations can be made for the HopeBoxes to be sent out to disaster victims. A global map will display the disaster locations, and donors will be able to choose Hopeboxes to send.
