OF

THE COURSE OF LECTURES

ON

THE PRINCIPLES AND PRACTICE OF SURGERY,

DELIVERED IN THE

JEFFERSON MEDICAL COLLEGE, PHILADELPHIA,

BY THOMAS D. MÜTTER, M. D.
Entered according to the act of Congress, in the year 1843, by THOMAS D. MUTTER, M.D.,
in the Clerk's Office of the District Court of the United States in and for the Eastern District of Pennsylvania.

THE PRINCIPLES AND PRACTICE OF SURGERY

Entered according to the act of Congress, in the year 1843, by
THOMAS D. MUTTER, M.D.
in the Clerk's Office of the District Court of the United States in and for the Eastern District of Pennsylvania.

19516
NOTE.

It will be recollected by my Class that last session I informed them that in all probability my work on Surgery would be ready for the present course of Lectures. A desire to render it as complete and as perfect as possible, has induced me to postpone its publication for a few months, until the value of several of the now mooted points shall have been determined by careful and patient observation. In the mean time I offer them this "Syllabus," in the hope, that, by its aid, and diligent attendance on the Lectures, they may derive such information as shall prove useful to their patients as well as to themselves.

The classification adopted differs materially from that of any other surgeon, and its utility has been fully tested during the last five or six years. It will be perceived that I arrange all the subjects comprised in the course under six heads:

1. Under the first, I include inflammation, its products and varieties; and wounds.
2. Under the second, I shall consider all the diseases of the different tissues and organs, commencing with the bones, and concluding with the skin.
3. Under the third, the various affections of regions may be considered.
4. The fourth division comprehends all tumours, whether malignant or non-malignant.
5. In the fifth, the Diseases peculiar to Females will be considered.
6. In the sixth, Amputation.

THOMAS D. MUTTER.
