Department of Surgery and the Gibbon Surgical Society
Present:

The 2\textsuperscript{nd} Annual Philip E. Donahue, M.D. Lectureship in Benign Gastrointestinal Diseases

\textit{Given by}

\textit{Jeffrey H. Peters, MD}
Seymour I. Schwartz Professor and Chairman
Department of Surgery
University of Rochester Medical Center

\textbf{“Understanding Barrett’s Esophagus: The Impact of Surgical Perceptions”}

At the conclusion of this presentation the participant should be able to:

1. Enumerate recent epidemiologic trends of Barrett’s esophagus
2. Relate the factors contributing to the development of intestinal metaplasia
3. Describe the definition of the various forms of Barrett’s metaplasia
4. Describe the physiologic defects associated with Barrett’s esophagus
5. Explain the relative roles of medical and surgical treatment in preventing the progression of Barrett’s esophagus
