This Article is brought to you for free and open access by the Jefferson Digital Commons. The Jefferson Digital Commons is a service of Thomas Jefferson University's [Center for Teaching and Learning \(CTL\)](#). The Commons is a showcase for Jefferson books and journals, peer-reviewed scholarly publications, unique historical collections from the University archives, and teaching tools. The Jefferson Digital Commons allows researchers and interested readers anywhere in the world to learn about and keep up to date with Jefferson scholarship. This article has been accepted for inclusion in Jefferson Digital Commons Reports by an authorized administrator of the Jefferson Digital Commons. For more information, please contact: JeffersonDigitalCommons@jefferson.edu.

Jefferson Digital Commons Quarterly Report: April-June 2018

The Jefferson Digital Commons has had another busy quarter! Over April, May, and June we had:

- **99,560** downloads
- **318** new works posted
- **196** countries visit the site
- **6,342** institutions access content

New Feature: PlumX Metrics

PlumX Metrics is now integrated with all articles in the JDC. PlumX provides individualized metrics on Usage, Captures, Mentions, Social Media, and Citations, allowing authors to measure the impact of their articles in multiple ways.

To find PlumX Metrics for an article, look for the PlumX box on the right-hand side of the page under the Download button. Hover over the PlumX button to see an overview of analytics or click on the box for more information:

The image shows two screenshots related to PlumX Metrics. The left screenshot shows a hover menu over a 'Download' button on an article page. The menu displays the following metrics: Usage (Downloads: 244, Abstract Views: 52, Link-outs: 1), Captures (Readers: 16), and Citations (Citation Indexes: 8). Below the metrics is a 'see details' link. The right screenshot shows the full PlumX Metrics interface for the article 'Pharmacologic and clinical evaluation of posaconazole'. It features a PlumX logo, article title, citation info, and a 'Download' button. The PlumX Metrics section includes a 'Explore PlumX Metrics' button and a summary of metrics: Usage (Downloads: 244, Abstract Views: 52, Link-outs: 1), Captures (Readers: 16), and Citations (Citation Indexes: 8). Below this is a 'REVIEW SUMMARY' section with repository URL, PURL, DOI, and author information.

New Feature: CrossRef DOIs

As a  member Thomas Jefferson University is now able to create DOIs for content published to the Jefferson Digital Commons. For now this capability is limited to [journals](#) and [newsletters](#), but it will be available for more content types in the future.

A Case Report and Overview of Familial Cerebral Cavernous Malformation Pathogenesis in an Adult Patient

[Manu K. Arul, BS](#), *State University of New York, Upstate Medical University*

[Omaditya Khanna](#), *Thomas Jefferson University*

[Michael R. Gooch, MD](#), *Thomas Jefferson University*

Abstract OBJECTIVE

We present a case of a 39 year-old woman who presented with a solitary cavernous malformation hemorrhage without any other lesions, and subsequently presented several months later with a new hemorrhage from a de novo lesion. We discuss mechanisms of paradominant inheritance and haploinsufficiency to describe phenotype expression of familial cavernous malformations.

CASE DESCRIPTION

The patient presented with unremitting headaches, who had a known history of a solitary cerebral cavernous malformation (CCM) for which she underwent resection several months prior with no evidence of any other CCM lesions seen on post-operative MRI. She has no history of whole brain radiation, family history of cavernous malformations, or prior head trauma. During this hospital visit, she was found to have develop two new lesions in the left fronto-parietal lobe and cerebellum. She was treated with surgical resection of the left frontoparietal lesion, and recovered fully. It is of interest that a patient approaching her fourth decade of life would start to develop formation of multiple de novo cavernous malformations, especially with an absent family history. Paradominant inheritance and haploinsufficiency are two proposed models of inheritance that can be related to this patient's disease progression.

CONCLUSION

The case illustrates an atypical clinical course of a patient with familial

College Restructuring

As of July 1, 2018 Thomas Jefferson University has a new college structure, which is now reflected in the JDC:

- Kanbar College of Design, Engineering and Commerce
- College of Health Professions
- College of Humanities and Sciences (*previously the College of Science, Health and the Liberal Arts*)
- College of Life Sciences (*previously the College of Biomedical Sciences *)
- College of Nursing
- College of Population Health
- College of Pharmacy

- College of Rehabilitation Sciences (**new**)
- Sidney Kimmel Medical College
- School of Continuing and Professional Studies

What People are Saying About the Jefferson Digital Commons :

Name: Don Strasburger, DC

Country: US

Resource URL: http://jdc.jefferson.edu/jmbcim_lectures/98/

Comments: Cheers to Dr. Monti for developing an excellent crossover design to demonstrate the effectiveness of Neuro Emotional Technique (NET) as a stress reduction tool in the Cancer Survivor population. It is also exciting to see the changes that have taken place in the brain on fMRI, both in the limbic system and with cerebellar connections. I look forward to additional applications of NET in research. Thank you Dr. Tobia for your passion in working with the participants and helping them achieve such life-changing results!
