

SCRUBS TRACKING

To both save costs and conserve supplies, nursing staff needed an effective process for tracking how many sets of scrubs each employee has.

The DICE Group repurposed an ID badge scanning app originally built for OIA to enable scrubs to be checked out then checked back in, therefore enforcing rationing limits.

BEHIND THE SCENES

The data from the badge scanning app is sent to a dashboard where staff can see how many sets of scrubs each employee already has before they allow another set of scrubs to be checked out.
