Initiated in his honor.

Dr. John H. Moore, Jr., MD, Surgical Residency Fund” has been a sage advisor. A fund, “The John H. Moore residents, students and staff. He was also touched the lives of thousands of patients, John was a committed Jeffersonian who

Addendum:

Just prior to going to press, we learned of the passing of our esteemed colleague, Dr. John H. Moore, Jr., on September 26, 2011. Just a few months into their Jefferson surgical residency, we have all noticed their dedication to patient care, their energy and their excitement in joining the Jefferson community.

Dr. Lara Goldstein who returned from her recent maternity leave at full throttle. As Director of Development for the Department of Surgery, Lara has been instrumental in the tripling of philanthropic support to the Department of Surgery, Development for the Department of Surgery, (a) has welcomed several new faculty members and a bolus of categorical interns (see below), (b) had a leadership transition at our Methodist Hospital, (c) are in growth mode at Methodist with initiatives in General Surgery, Vascular Surgery, Wound Care and Surgical Oncology (see the cover story), and (d) with the leadership of Dr. Nicholas Cavarocchi have seen remarkable growth in our adult ECMO program with outstanding clinical results and several research projects brought to fruition. Exciting times again this year at Jefferson!

I want to take this opportunity to also praise the Jefferson Foundation and particularly Lara Goldstein who returned from her recent maternity leave at full throttle. As Director of Development for the Department of Surgery, Lara has been instrumental in the tripling of philanthropic support to the Department between 2006 and 2011. She has partnered well with our researchers to assist with grant submissions and with our clinicians in building relationships with our grateful patients. Lara’s efforts have also culminated in a recent estate gift to the Department (see Those Who Give) directed towards the support of our surgical fellowships. It is important that we all redouble our efforts to bring support to the Department, as we grow our volumes and our footprint in the Delaware Valley.

Meet Our Surgical Interns

We have welcomed an amazing new group of categorical interns, selected from over one thousand applicants to our program. These doctors, who recently matched with Jefferson Medical College (JMC), started on June 20, 2011. Just a few months into their Jefferson surgical residency, we have all noticed their dedication to patient care, their energy and their excitement in joining the Jefferson community.

The academic year 2011/2012 is now four months old, and we are off to a splendid start! We (a) have welcomed several new faculty members and a bolus of categorical interns (see below), (b) had a leadership transition at our Methodist Hospital, (c) are in growth mode at Methodist with initiatives in General Surgery, Vascular Surgery, Wound Care and Surgical Oncology (see the cover story), and (d) with the leadership of Dr. Nicholas Cavarocchi have seen remarkable growth in our adult ECMO program with outstanding clinical results and several research projects brought to fruition. Based on the principles of a machine that was invented in the 1950s and first used successfully in humans at Jefferson Hospital by John Gibbon, Jr., MD, ECMO takes a patient’s blood, gives it oxygen, warms it and returns it to the patient. Today’s ECMO machine, with its innovative circuitry, newer membrane oxygenator and centrifugal pump is a completely different machine but the concept is the same. Complemented by the SCCU team’s comprehensive approach, ECMO treatment helps avoid serious complications such as bleeding and hemolysis (the breakdown of red blood cells) and allows the heart and/or lungs to recover. At Jefferson, patients are placed on ECMO earlier than usual, ideally before the patient has organ failure. This improves their chances of either being successfully weaned from ECMO or having surgery with fewer complications, and that reduces costs for both the hospital and the patient.

The SCCU currently treats about 30 patients annually but that number is expected to increase by 50% this year with referrals from within and out-of-state. “Our team has been trained to deliver a level of complex critical care that is sophisticated and consistent,” notes Dr. Cavarocchi, “Our patients are benefiting and our colleagues are noticing.”
