Department of Health Policy Presents Disease Management Colloquium

The Department of Health Policy will host a Disease Management Colloquium on June 27-30, 2004, at McClellan Hall, Jefferson Medical College.

The disease management enterprise is emerging as one of the major initiatives to make America's healthcare system more efficient and cost effective and to enhance healthcare quality and reduce medical errors. The Disease Management Colloquium will explore the role of disease management in patient safety, Medicare and Medicaid initiatives in disease management, the regulatory setting for disease management, custom care, evidence-based medicine, information flow, and recent innovation by private disease management companies.

The Colloquium seeks to better educate government agencies, the healthcare industry (including health plans and providers), employers, and the general public about the important role disease management programs play in improving healthcare quality and outcomes for persons subject to chronic conditions.
