

Supplemental Table 1: Risk factors for strabismus surgery after cataract surgery among patients with no previous diagnosis of strabismus before cataract surgery

Risk factors associated with strabismus surgery after pediatric cataract surgery among patients with no previous diagnosis of strabismus before cataract surgery from a multivariable Cox proportional regression model adjusting for all covariates

	Odds Ratio	Lower 95% CI	Upper 95% CI	p-value
Age				
<1	<i>Reference</i>			
1-4 years	0.52	0.34	0.79	0.002
>=5	0.10	0.06	0.15	<0.001
Male sex	0.77	0.57	1.03	0.081
PFV diagnosis	0.96	0.59	1.55	0.868
IOL placement	0.65	0.46	0.92	0.014
Nystagmus	1.66	1.09	2.52	0.017
Unilateral cataract (reference bilateral)	1.45	1.03	2.04	0.033

PFV = persistent fetal vasculature; IOL = intraocular lens; CI = confidence interval
