

Supplemental Table 3: 5-year estimates for rates of strabismus surgery by the pre-existing diagnosis of strabismus before cataract surgery and age at cataract surgery

5-year Kaplan-Meier estimates for rates of strabismus surgery after cataract surgery by the pre-existing diagnosis of strabismus before cataract surgery and age at cataract surgery

Group	5-year estimated rate of strabismus surgery	Lower 95% CI	Upper 95% CI
No strabismus diagnosis, age at cataract surgery < 1 year	25.2%	19.9%	30.2%
No strabismus diagnosis, age at cataract surgery 1-4 years	11.8%	7.5%	15.9%
No strabismus diagnosis, age at cataract surgery >=5 years	2.2%	1.3%	3.0%
Strabismus diagnosis, age at cataract surgery < 1 year	50.3%	24.1%	67.4%
Strabismus diagnosis, age at cataract surgery 1-4 years	37.1%	22.7%	48.8%
Strabismus diagnosis, age at cataract surgery >=5 years	10.3%	6.5%	13.9%

CI = confidence interval
