The Use of Narrative Pedagogy and Unfolding Case “Ivan” To Promote Interprofessional Collaboration and Education Among Nursing and Radiology Students

- Mary Bouchaud, PhD, MSN, RN, CNS, CRRN
  Assistant Professor of Nursing
  Thomas Jefferson University
- Elizabeth Speakman EdD, RN, ANEF, FNAP
  Co-Director, Jefferson Center for Interprofessional Education
  Associate Professor of Nursing
  Thomas Jefferson University
Background

• Definition of Interprofessional Practice:
  • Multiple health workers from different backgrounds work together with patients, families, careers and communities to deliver the highest quality of care (World Health Organization, 2010)

• To Err Is Human: Building a Safer Health System
  • Recommended interdisciplinary team training to increase patient safety and quality health care (Institute of Medicine, 1999)

• Crossing the Quality Chasm:
  • All health professionals should be educated to deliver patient-centered care as members of an interdisciplinary team, emphasizing evidence-based practice, quality improvement approaches, and informatics. (Institute of Medicine, 2001)

• The Future of Nursing: Leading Change, Advancing Health:
  • Nurses should be full partners, with physicians and other health care professionals, in redesigning health care in the United States (Institute of Medicine, 2010)
Mission - To promote excellence in healthcare through interprofessional education and scholarship.

Vision Statement - JCIPE will define the future of interprofessional care by creating a culture of collaborative educational practice, setting the standards for patient-centered care, team-based training and becoming a national/international leader in developing evidence-base to support interprofessional education.

Scope - Dedicated to implementing and evaluating interprofessional education and collaborative practice initiatives throughout Thomas Jefferson University curriculum.
• Accepting the premise that interprofessional education can be defined as when students from two or more professions, learn about, from and with each other (WHO, 2010), educators must find meaningful and purposeful ways to engage students with other members of the health care team in order to prepare a practice ready workforce.
Narrative Pedagogy

• Narrative pedagogy is an interpretive approach to teaching and learning that is being used to foster educational reform.
• Narrative pedagogy is an approach to thinking about teaching and learning that evolves from the lived experiences of teachers, clinicians, and students (Nehls, 1995).
• For health care providers, narrative pedagogy can be used to rethink the teaching of knowledge and practice, that evolves from the lived experiences of patients.
Stop and Reflect
So what’s an ACE day anyway

• Alternate Clinical Experience- an opportunity to create meaningful learning opportunities that are centered around open dialogue, fact finding and learning from the ‘experts’
Jefferson School of Nursing

- FACT students cannot do Health Mentors
- Need to find meaningful IPE relationships
- Need ‘real patients’
- Need to match the curriculum-Nu 410 Community Course
Stretch relationships

- Stretch interprofessional relationships would be health profession students paired with one or more of the groups of students enrolled in law, psychology, biological and chemical science, radiologic science, music, art, theater or business programs.
- For these partners teamwork interprofessional activities might be limited to the classroom setting with the occasional potential simulation.
Radiological Science and Nursing: Who knew?
What’s the advantage of unfolding case study

• Nursing students are unfamiliar with roles and responsibilities of their health care colleagues and how partnering with them can impact patient health outcomes.
• Many are unaware of how an inter-professional health care team contributes to preventing and resolving health care issues affecting care transition from tertiary settings back to the community.
• “Ivan” was developed to prepare nursing and allied health students for inter-professional, patient centered care practice.
Core Competencies for Interprofessional Collaborative Practice

Sponsored by the Interprofessional Education Collaborative*

Pre-publication recommendations from the IPEC Expert Panel
February 2011
Thomas Jefferson University
IPE Core Competencies
Adapted from IPEC Core Competencies for Collaborative Practice, 2011

Values/Ethics:
Respect the unique cultures, values, roles/responsibilities and expertise of other health professionals.

Roles/Responsibilities:
Explain the roles and responsibilities of other health/healthcare providers and how the team works together to provide care.

Interprofessional Communication:
Work to ensure common understanding of information, treatment, and health/healthcare decisions by listening actively, communicating effectively, encouraging ideas and opinions of other team members and expressing one’s knowledge and opinions with confidence, clarity and respect.

Team and Teamwork:
Reflect on the attributes of highly functioning teams and demonstrate the responsibilities and practices of effective team member(s).

Unfolding case study is just like ZOOM

“Ivan” is an unfolding case scenario about a patient admitted to the hospital and his family’s experiences navigating the healthcare system to transition Ivan back to the community.
Students were placed in inter-professional groups of ten with a faculty facilitator to analyze the events and provide collaborative reflection as they “unfolded” the case to a different outcome.

Findings were presented to the class followed by interactive dialog with a panel of 10 expert inter-professional clinicians.
Expert Panel Validates the Students
Interprofessional Care Defined

Health caregivers

Interprofessional collaboration

Patient & family
Relevance to IPE

• This activity enables students who are from different disciplines to understand the complexity, value, and need to work together, especially in transitioning patients back to community settings.
