A Great Adventure*

By William Darrach, M.D., Sc.D., LL.D.
Dean, College of Physicians and Surgeons, Columbia University

What a dull and sorry place this world would be without the spirit of adventure. To travel a fixed and ordained path with no uncertainties or dangers, no surprises or sudden unexpected emergencies may attract the timid soul, but for most of us such a journey would be very tame and would leave us unsatisfied and hungry.

The Century Dictionary tells us that adventure means "that which comes or happens; a hazardous enterprise; a remarkable occurrence in one's personal history; a speculation of any kind; peril, or danger." Is there not an answering thrill to these words?

Adventure may be undertaken deliberately or it may suddenly come upon us when we least expect it. Do you remember those thrills of excitement you experienced in your early days when with your fellow-conspirators you planned in deep secret that excursion? To escape the watchful parental eye, to collect and hoard the food necessary to sustain the band, to elude the hated higher authority, be it father, nurse, teacher, policeman, or landed proprietor, were matters of great importance and needed careful thought and serious discussion. Even if the affair was carried through quietly and successfully, even if you were attacked neither by dog, nor Indian, nor the horrible giant who lurked in the dark corner by the corn crib, the excitement and the pretended bravery you showed made it all quite worthwhile. The memories of such events are perhaps their most precious qualities, yet each such adventure adds to our equipment and our character as well as our experience. So it is that tales of adventure have such charm for boys, and as the years go on a man's appreciation of adventure is not a bad sign of his youthful attitude on life.

In olden days the deliberate undertaking of an adventure was a less complicated affair than it is today. The knight called for his horse and armor, his sword and lance, and was off upon his quest without much ado or equipment. Admiral Byrd's preparations for his southern trip were in marked contrast. Last week a friend of mine sailed for the Belgian Congo on a quest for the Museum of Natural History. His own share of the accoutrement consisted of thirty-three metal boxes averaging fifty pounds a piece. The wise adventurer today studies his country, its climate, its inhabitants, man, beast and insects; he learns its dangers and difficulties and diseases. He reads its history and accounts of the previous expeditions to this and similar places, and he gets himself physically fit.

You men of Jefferson are ready to embark on a great adventure. We, your elders, your families and friends, are here to wish you Godspeed on your quest. You know not what awaits you over the crest of the hill or around the corner. But you have the qualities which promise well for the success of your expedition. You have the desire to learn new things, to meet and solve new problems, to add to the common knowledge and to make the world a better place in which to live. Your period of preparation has been long and often arduous. You have absorbed much of the experience of those who have gone before you. You have profited both by their successes and their failures. Besides acquiring information in the sciences, basic to human life, you have trained your powers of observation. Through your eyes and ears, your fingers and noses, you are able not to pry into many of the secrets of the human machine. You have learned how to assemble this evidence in an orderly manner, to properly evaluate it and to deduce therefrom what is the actual condition giving rise to these signs and symptoms. You can now form some idea of what may happen and are prepared to meet these conditions. You have learned what may be done to prevent or preserve, to repair or mitigate these ills of mankind.

And yet how comparatively little have your elders been able to teach you, or you to learn,

* Commencement Address delivered at Jefferson Medical College. June 6th, 1930.
of the real causes of disease or the methods of combat. How rarely will the actual case fit entirely the text book picture. How many and sudden are the surprises that arise and how rapidly will the picture change. How frequently will these changes become real dangers, and how tremendous are the responsibilities on your shoulders. The practice of medicine is truly a hazardous enterprise. To be ready to meet these emergencies as they arise requires all that a man can give. We must continuously increase our knowledge and broaden our judgment. We must be ready to make definite decisions and we must have the courage to act promptly and without fear. We must remain open minded as new evidence arises and so intellectually honest as to acknowledge our mistakes and profit by them.

In the battle against disease the patient's greatest asset is his own inherent tendency to resist and overcome the enemy. Our own positive efforts as physicians can be of great help in removing or weakening the cause or in aiding the body to resist, but let us always realize that most of our therapeutic efforts are two-edged swords and have potential dangers which are often as great as are their possibilities for good. In whatever we do, our problem is to try and do as much good and as little harm as possible.

In studying the various diseases to which the human body is prone, you have learned the normal course, the usual outcome, but in your ward and clinic experience how uncommonly have you met these normal cases. You have learned to expect the unusual and it is to this unexpectedness, this uncertainty that the practice of medicine owes its adventurous quality. Only too often are these unforeseen events truly hazards if not actual perils and dangers. We must not only be in readiness and equipped to meet these emergencies, but we must cultivate such a philosophy that we may afterwards learn our lesson without losing our courage. It is difficult enough to carry on when in spite of all we may do our patients do not recover. It may be a comfort at times to realize that no matter what we might have done the outcome would have been the same. The dark times will come though when our own mistakes of commission or of omission have contributed to the unhappy result. As we honestly face the facts, we know that such perils require great courage. At such times, especially when we truly walk in the valley of the shadow of death, do we physicians feel the need of a firm faith in a Supreme Being. Like a child in the dark our hand reaches out for some unseen presence. We listen for a voice which will tell us not to be afraid. In spite of sneers and doubts I am one who believes that religion is a vital force in medicine and that the physician who has not some religious belief is truly handicapped.

There are other hazards also. There are the dangers of contagion and infection to which the physician is constantly exposed and has always taken as a matter of course and with that fearlessness of youth which is often carried to a foolhardy extreme. There is another danger which will try your soul and prove your manhood as you are powerless to prevent or avoid it. I mean the danger to your good name from the careless gossip of your patients and their friends and even your colleagues. Only too often do we hear of the caustic, cruel and unjust criticism of physicians. See to it that you are not guilty of such action.

But as its hazards and perils are great, so also are its rewards. Awaiting you in this great adventure are many recompenses.

So far, I fear that most of your attention has been directed to learning the diseases to which humanity is liable. But more and more you will realize as time goes on that your main problem will be not disease occurring in a human being, but rather an individual personality who is suffering, who is in trouble, sorrow, need, sickness or other adversity. It is the human individual of whom you must think and for whom you are responsible. You must recognize and dispel the fear which lies behind that anxious face, that dread of what may come to pass. The sense of satisfaction for you to see peace return, to see happiness restored to a disturbed household, to see men and women take up their burdens with new hope and new courage, because of your assistance, will often times be greater than your relief when the fever subsides or the pain disappears.

The feeling of trust and confidence in us which some of our patients show is one of the most stimulating influences men can experience. Often it will make us shudder at our own unworthiness. Because of this trust in us, we physicians share with the clergy and the schoolmasters that responsibility for the lives of others and the need for being worthy of that trust bars for us many of those delightful vices which the world does not take as seriously in other walks of life. The physician can never quite live up to the ideal held out for him but he has to continually try his utmost. As old Hippocrates outlined for us more than two thousand years ago, "We shall be loyal to the profession of medicine, and just and generous to its members; we shall lead our lives and practice our art in uprightness and in honor" and then "if you shall prove true to this, your oath, may prosperity and good repute be ever yours; the opposite should you prove yourselves forsworn."
The Annual Mid-Winter Dinner and Entertainment

THE Entertainment Committee of the Alumni Association announces that a dinner, vaudeville and frolic will take the place of the usual mid-winter smoker, to be held Thursday night, February 12th, in the Assembly Hall of the College Building.

The annual business meeting will be held at 6:30, dinner at 7, followed by the introduction of the new professors, and then a two-hour vaudeville show.

The cost will be $2.50 and because of the limited number that can be accommodated, members of the Alumni Association are urged to return their reservations cards promptly.

The Alumni Fund of the Jefferson Medical College

INTEREST in the Alumni Fund has continued throughout the past year, and there has been added to the amount already deposited a considerable sum. In the light of general economic and business conditions, it was to be expected that there would be a diminution in the number of new subscribers and the total amount contributed during the year, and while these expectations have been realized, the effect of these influences has been less than might have been expected. It is especially gratifying to note the continued support of loyal Alumni under the difficult circumstances of the day.

At this time an appeal is made directly to those Alumni who have not, during the eight years’ existence of the Alumni Fund, made any contribution whatever. It is fully realized that Alumni may find it difficult to make a substantial contribution each year; but it is also believed that almost every Alumnus could have found it possible to make some contribution during the time which the Fund has been in existence, and all such are again urged to consider the possibility of a contribution at a time when the difficulties of securing new contributors are obvious.

The present financial status of the Fund as of December 31, 1930, is shown by the following:

College Program

Thursday, February 12, 1931

ALUMNI are cordially invited to participate in the regular college program of clinics and lectures on the day of the mid-winter dinner. The program follows:

10.00-11.30 A.M.—Professor Thomas C. Stellwagon.
Clinic—Genito-urinary Surgery.
Hospital Clinical Amphitheatre.

12.00-1.00 P.M.—Professor Randle C. Rosenberger.
Lecture—Etiology.
College Auditorium.

2.00-3.00 P.M.—Professor Thomas McCrae.
Clinic—Medicine.
Hospital Clinical Amphitheatre.

3.00-4.00 P.M.—Professor J. Earl Thomas.
Lecture—Physiology.
College Auditorium.

4.00-5.00 P.M.—Professor P. Brooke Bland.
Clinic—Obstetrics.
Hospital Clinical Amphitheatre.

5.00-6.00 P.M.—Professor Edward L. Bauer.
Lecture—Pediatrics.
College Auditorium.

Jefferson Graduate Awarded

DR. ELLIOTT MENDENHALL, ’23, was awarded the George O. Wilson cup at the fourteenth annual banquet of the Dallas Junior Chamber of Commerce. The award was granted for distinguished service in health work.
Death of Dr. Henry Leffmann

Dr. HENRY LEFFMANN, one of Philadelphia's most distinguished chemists and physicians, died on December 25, 1930, at 83.

Born in 1847 near Second and Market Streets, Doctor Leffmann first distinguished himself in scientific subjects at Central High School, where he served as laboratory assistant. He was graduated from the high school in 1865.

He then entered Jefferson Medical College, from which he was graduated in 1869. He was a member of the teaching corps of Jefferson College for many years, and served on the staff of the hospital as well. He was finally elected pathological chemist emeritus at Jefferson Hospital. As assistant professor of chemistry he taught in Central High School until 1880.

He was appointed port physician of Philadelphia by Governor Robert E. Pattison. President Cleveland also appointed him coiner of the United States Mint.

In 1885 he was appointed professor of chemistry in the Wagner Free Institute of Science. One year before he was elected to the same position in the Pennsylvania College of Dental Surgery, and in 1888 he occupied the chair of chemistry at Woman's Medical College of Pennsylvania, which he retained for many years.

Doctor Leffmann was a member of the Franklin Institute for many years. Last May he was elected an honorary member of the institute in recognition of "his valuable service" to science. He was a member also of the Academy of Natural Sciences.

As a final evidence of his loyalty to Jefferson is a bequest of $30,000 contained in his will.

The 1931 Class Book

THE college annual, The Clinic, published by the Senior Class of Jefferson Medical College, will be distributed about April 1st. The Clinic will contain many features of interest, including the original Gross lecture by Professor John Chalmers DaCosta and a reproduction of the portrait of Professor John H. Gibbon. There will be a number of views of the new college building and the Curtis clinic.

Subscription price is $5.00. Reservations should be made to Mr. Harry C. McClain, business manager, 1025 Spruce Street, Philadelphia, before February 15, 1931.

Tumor Clinic Day at the Jefferson Medical College and Hospital

On December 12, 1930, a Tumor Clinic day was held at the Jefferson Medical College and Hospital for those especially interested in the organization of Tumor Clinics. It was arranged at the request of the Cancer Commission of the Medical Society of the State of Pennsylvania. The morning program was held in the college building and the visitors then had lunch at the Jefferson Hospital. The afternoon program was largely utilized to demonstrate the practical working of the Tumor Clinic, with discussions and demonstrations of treatment, the handling of patients, system of records, follow-up system, and the plan of the Staff Conference. A Pennsylvania Association of Tumor Clinics was organized.

Bequest to Jefferson Hospital

Dr. F. F. PRICE, '91, of Carbondale, Pennsylvania, who died on August 5, 1930, bequeaths to Jefferson Hospital the sum of $10,000, the income of which is to be used toward perpetually maintaining a room in memory of his mother, Therese Price, and his wife, May Dudley Price.

Take Part in College Activities on the Day of the Mid-winter Dinner
Activities of the Branch Chapters of the Alumni Association

MEETING of the Western Pennsylvania Chapter was held in Washington, Pa., on May 23, 1930, in conjunction with the County Society meeting. Doctor Patterson gave a clinic that was attended by over 300, and approximately 450 were present at the banquet in the evening. Doctor Patterson was presented with a desk clock containing on its face a reproduction of the old Jefferson College, at Cannonsburg.

In September, 1930, Doctor Klopp attended the meeting of the North Carolina Chapter that was held in connection with the Guilford County Medical Society. This meeting was a great success.

The Annual Smoker, in conjunction with the Pennsylvania State Society meeting, was held on October 8th, in Johnstown, Pa., at the Fort Stanwick Hotel. The speakers were Doctors Patterson, Rosenberger and Stellwagen. One hundred and fifty enthusiastic Alumni were present, and all were of the opinion that the meeting was an eminently successful one. A telegram of greeting and best wishes was sent to Doctor DaCosta.

On October 30, 1930, the annual meeting of the Northeastern Pennsylvania Chapter was held in Wilkes-Barre. Doctors Anspach, Tyson, Klopp and Patterson conducted clinics during the day, and a dinner was held in the evening. The Northeastern Pennsylvania Chapter is one of our most active branch organizations and its gatherings are always enthusiastic meetings.

The Southwestern Pennsylvania Chapter held its annual meeting in Washington, Pa., on November 20th. Clinics were conducted in the morning and afternoon by Doctors Rosenberger, Klopp and Stellwagen. In the evening a Smoker which was attended by 125 loyal Alumni, was the occasion for the renewal of many old friendships and a social function long to be remembered.

Plans are under way for the organization of a branch chapter in New York City. A number of prominent Alumni, who are practicing in that city, are considering the matter, and it is our hope that their efforts will prove successful in the near future.

A meeting of Jefferson Alumni was held in Minnesota, October, 1930, through the efforts of Dr. M. N. Moss, of St. Paul. The meeting was a very successful one, attended by twenty-three Alumni.

Faculty Appointments

Jefferson Names Four Graduates of the Institution as Professors of Surgery

JEFFERSON Alumni will receive with pleasure the recent announcement by the Board of Trustees of the election of Doctors Thomas A. Shallow and Edward J. Klopp as Professors of Surgery, and Doctors Charles F. Nassau and Arthur E. Billings as Clinical Professors of Surgery.

Appointment of Dr. Joseph O. Crider as Assistant Dean and Associate Professor of Physiology

JOSEPH O. CRIDER, M.D., formerly Dean and Professor of Physiology at the University of Mississippi School of Medicine, has been appointed Assistant Dean and Associate Professor of Physiology at the Jefferson Medical College.

Doctor Crider was born in 1881, in Harrisonburg, Virginia. He was educated at the University of Virginia, from which institution he graduated in Medicine in 1912. In 1912-1913 he was Instructor in Physiology and Pharmacology in the University of Virginia School of Medicine; 1913-1916, Associate Professor of Physiology and Histology, University of Mississippi School of Medicine; Assistant Dean and Professor of Physiology, 1916-1924. He was appointed Dean and Professor of Physiology in 1924, and continued in those positions until appointed Assistant Dean and Associate Professor of Physiology in the Jefferson Medical College.

Jefferson welcomes Doctor Crider and extends best wishes for his success.

Resignation of Professor John H. Gibbon

AFTER nearly twenty-five years of continuous service at Jefferson, Dr. John H. Gibbon, '91, Professor of Surgery and of Clinical Surgery, tendered his resignation which took effect September 1, 1930. Doctor Gibbon was elected Emeritus Professor of Surgery.
DOCTOR EDWARD J. KLOPP
Professor of Surgery

DOCTOR CHARLES F. NASSAU
Clinical Professor of Surgery
DOCTOR THOMAS A. SHALLOW
Professor of Surgery

DOCTOR ARTHUR E. BILLINGS
Clinical Professor of Surgery
William Potter Memorial Lecture

Thursday, February 5, 1931
at
Eight o'Clock

George W. Crile, M. D., Director,
Cleveland Clinic Foundation

Research into the Formation of Autosynthetic Cells with Special Reference to the Production and Growth of Cancer Cells and to the Cause of Fatty Degeneration.

Graduate Leaves College
$30,000

A FUND of $30,000 for scholarships will come to Jefferson Medical College from the estate of Dr. William T. Hamilton, '87, who died October 15, 1930, at his home, 1221 West Lehigh Avenue, Philadelphia. Upon the death of Mrs. Hamilton four scholarships of $7,500 each are to be established.

Alpha Omega Alpha Lecture

The annual Alpha Omega Alpha Lecture of the Jefferson Medical College was delivered by Ales Hrdlicka, M.D., Sc.D., of the Smithsonian Institution, United States National Museum, Washington, D. C., at the Assembly Hall, Jefferson Medical College, Tuesday evening, December 2, 1930. The title was "Man's Future in the Light of His Past and Present and Its Bearing on Medicine."
