This Article is brought to you for free and open access by the Jefferson Digital Commons. The Jefferson Digital Commons is a service of Thomas Jefferson University's Center for Teaching and Learning (CTL). The Commons is a showcase for Jefferson books and journals, peer-reviewed scholarly publications, unique historical collections from the University archives, and teaching tools. The Jefferson Digital Commons allows researchers and interested readers anywhere in the world to learn about and keep up to date with Jefferson scholarship. This article has been accepted for inclusion in Jefferson Surgical Solutions by an authorized administrator of the Jefferson Digital Commons. Heart Transplant Program Offers a New Lease on Life

Russell Cerminara is not someone you would readily identify as a patient in a hospital, let alone someone on the heart donor list. Casually dressed and exceedingly well groomed, he lounges comfortably in the waiting area outside his room on the 5th floor of the Gibbon Building – the Cardiac Unit – at Jefferson University Hospital. If it weren’t for the IV stand, and the small black Jansport backpack that holds a device pumping his heart, you’d never know he’d spent the last decade battling a life-threatening heart condition and been in the hospital since April.

Every bit the image of a successful television producer, Mr. Cerminara takes calls on his blackberry when not doing physical therapy or interacting with other patients and family members. He’s working to gain enough strength to go home while he waits for a heart, which could be a while given his O blood type.

Medicare Certified...the highest quality indicator for a transplant program, based on the number of transplants and clinical outcomes

On May 24, 2007, he received a Jarvik 2000® Heart Assist System while he waits for a donor heart. Thanks to Jefferson surgeons, television producer Russ Cerminara now benefits from a portable Jarvik 2000® Heart Assist System while he waits for a donor heart.

Jefferson was the first hospital in Philadelphia to offer the groundbreaking device, which has not yet been approved by the FDA as standard treatment. Mr. Cerminara is but one success story in a young but impressive and growing Heart Transplant Program at Jefferson – which was Medicare Certified after only a very short time. This is the highest quality indicator for a transplant program, based on the number of transplants and clinical outcomes as well as skill and professionalism of the medical and surgical teams. For patients with serious cardiac failure, this makes Jefferson a financially viable option for treatment.

The surgical team benefits from a new surgical suite that contains state-of-the-art video monitoring devices. James Diehl, MD, Director of the Division of Cardiothoracic Surgery, says that this makes more seamless procedures possible that integrate endoscopy as well as minimally invasive cardiac surgery techniques. “What is more,” he says, “everyone in the operating room can see the procedures with exceptional clarity.”

The quality of care speaks for itself. “I’m going to make a television show about this disease, treatment process, and this device,” says Mr. Cerminara. “Because the public in general is very unaware of it, like I was.” His continued recovery is sure to make this possible, and will make for another of the compelling and positive stories to which he continues to be so devoted to telling.

On the Job

Meet Lara Allan Goldstein, MD

Lara Allan Goldstein, MD, Director of the Division of Cardiothoracic Surgery, says that this makes more seamless procedures possible that integrate endoscopy as well as minimally invasive cardiac surgery techniques. “What is more,” she says, “everyone in the operating room can see the procedures with exceptional clarity.”

The quality of care speaks for itself. “I’m going to make a television show about this disease, treatment process, and this device,” says Mr. Cerminara. “Because the public in general is very unaware of it, like I was.” His continued recovery is sure to make this possible, and will make for another of the compelling and positive stories to which he continues to be so devoted to telling.

ON THE JOB

Meet Lara Allan Goldstein

Page 3
CHARLES J. YEO, MD
Samuel D. Gross Professor and Chair, Department of Surgery

It’s great to have a new academic year underway, and also review the past year’s accomplishments.

On the clinical side, there has been fine growth of programs in Endovascular, Minimally Invasive, Hepatopancreaticobiliary, Transplant, Cardiothoracic and Trauma Surgery. We had a superb Residency Review Committee site visit, receiving five-year accreditation and a commendation for educational initiatives. Our complex case volume has grown by approximately 40%. The SICU has doubled in size, and we’ve expanded to a satellite office at St. Agnes, adjacent to Methodist Hospital.

On the research front, 41 research grants were submitted and we currently have 15 funded research projects. The largest grant came from the American College of Surgeons and went to Dr. Arafat for her work in pancreatic carcinogenesis.

A paper by Drs. Grabo, Kairys, and Dinuzio on endovascular procedures, presented at the American Surgical Association in April, was recently published in the Annals of Surgery. Drs. Arafat and Kennedy presented at the Southern Surgical Association, and Dr. Tarola presented at the American Association of Plastic Surgery.

Furthermore, during Digestive Disease Week, we had three oral presentations and 10 poster presentations!

The new J. Wallace and Gail G. Davis Professorship supports Dr. Thomas Tulenko in his role as Director of the Division of Surgical Research. This has been a year of growth and some change, but a year of overall stability and productivity!

Jefferson continues to set the trend in breast care with the opening of Jefferson-Honickman Breast Imaging, located on the 4th floor at 1100 Walnut Street, in January 2007. This is the first phase of a three phase facility project that will provide our patients with the most advanced expertise and technology as well as personalized patient care in a warm and comfortable environment.

The remaining phases of the Jefferson Breast Care project include breast screening, an MRI and a center for clinical, educational and support services.

With the growth of a comprehensive breast care program, Jefferson Surgeons continue to be at the forefront of care. The surgical practices of Drs. Gordon Schwartz, MD, MBA, Anne Rosenberg, MD, and Kristin Brill, MD are dedicated to breast surgery. Several general surgeons also specialize in breast surgery: including Adam Berger, MD; Karen Chojnacki, MD; Melvin Moses MD; Bernadette Profeta, MD; and Gary Rosato, MD.

Dr. Rosenberg emphasizes the comprehensive, multidisciplinary services available at Jefferson. “From prevention and genetic screening programs to early detection as well as surgical and non-surgical treatment options, we offer the entire spectrum of the best of what medical care has to offer today.”

Dr. Brill explains that we are planning the new Jefferson Breast Care Facility to create an easy, stress-free experience for patients. “The program emphasizes communication between patient and doctor, but also among surgeons, radiologists, nurses, technologists, and other healthcare providers,” she says. “The art of what we do is to reassure women that treatment can be customized to suit their particular situation, lifestyle, and stage of life.”

Meet Our Surgical Interns

Jefferson surgeons are currently assisted by an exceptional group of categorical interns. These doctors, who recently matched with Jefferson, started on June 20, 2007 (shown left to right):

- Allison Goldberg, MD, Albert Einstein College of Medicine; Adam Bodzin, MD, Boston University School of Medicine; Joshua Marks, MD, Jefferson Medical College; Jennie Baek, MD, Dartmouth Medical School; Chandan Kunduwar, MD, University of Arizona College of Medicine; Cassandra Talbott, MD, George Washington University School of Medicine.

We are also pleased to welcome back the following Jefferson graduates as preliminary interns: James Etzener, MD and Roman Politi, MD in General Surgery; Rohan Chitale, MD in Neurosurgery and Daniel Sackett, MD in Urology.

Women who visit Jefferson-Honickman Breast Imaging enjoy personalized, state-of-the-art care that is tailored to the unique issues and concerns of their particular age group.

Thanks to the skills of our plastic surgeons, James Fox, MD, John H. Moore MD, Stephen Gopt, MD, and Gary Tuma, MD, Jefferson leads national trends relating to mastectomy and reconstruction, including LAT Flap (Latissimus Dorsi Myocutaneous Flap) reconstructions. “LAT Flaps” can be much easier for women to live with than the more traditional TRAM Flap reconstruction that requires taking skin, muscle and fat from the abdomen. Nationally, 30 to 35 percent of women have breast reconstruction immediately following a mastectomy. Jefferson’s rate for patients over the age of 65 is even higher than that. “We show no age bias,” says Dr. Brill, “and equally encourage our older and younger patients to take advantage of the excellent team of plastic surgeons.”

Jefferson surgeons are educators and leaders in the field. Dr. Schwartz organizes a highly respected biennial international breast cancer consensus conference. “We do this to bring together the best experts to discuss and debate a chosen topic and ensure that the latest treatments are available to patients worldwide,” explains Dr. Schwartz. The Jefferson program also offers one of only 30 breast surgery fellowships across the country.

More Veggies, Less Breast Cancer: Unlocking One Secret to Prevention

We all know that eating a balanced diet is good for us. Susan Lanza-Jacoby, PhD, the Principal Investigator of the Cancer Biology and Nutrition Laboratory in the Department of Surgery, is taking this conventional wisdom to new scientific heights. She investigates molecular abnormalities involved in the development of breast cancer and aims to identify novel strategies using food components for prevention and treatment.

“Breast tumors that overexpress this gene are aggressive,” says Dr. Jacoby. “They account for between 20 and 25 percent of all breast cancer in women, and do not respond well to standard treatments, which results in a poor prognosis for the patient.”

Her research suggests that a number of dietary factors can have cancer-fighting properties. Diindolylmethane (DIM) is a component of certain vegetables, called cruciferous (such as broccoli, cauliflower, cabbage, and Brussels sprouts), and members of Dr. Jacoby’s lab have been observing that it can decrease growth and even kill breast cancer cells that result from overexpression of the HER-2/neu gene.

She explains that mice fed our Western diets took about 6 to 7 months to develop breast tumors, whereas when they fed DIM to the transgenic mice, it took over a year to develop the tumors. “This is a significant delay,” she explains, “Consider the potential for helping genetically predisposed adolescent girls delay the onset of cancer until well into their 50s or 60s.”

Dr. Jacoby is also investigating how to develop combined therapies that will prevent the development of breast tumors. A multitargeted approach based on the characteristics of the individual tumor has provided more effective prevention and treatment. “We measured the growth of tumors in the mice, and when we used a combination of the DIM supplement and doctaxel, a chemotherapeutic another agent, there was a significantly slower rate of tumor growth.” She is also finding that a COX-2 inhibitor, used in combination with other agents, can prevent the incidence of breast tumors altogether.

In July Dr. Jacoby was awarded a research grant from the Pennsylvania Department of Health to continue her study of the role of the ErbB and COX-2 signaling pathway in HER-2 breast cancer. Thanks to a grant from the U.S. Department of Agriculture, she is developing a teaching module about the role of nutrition and cancer prevention, which she will mean her exciting findings to date will have a direct path into patients’ lives.

Making a Difference

One Donation at a Time

Not all gifts to Jefferson Surgery come from a single philanthropic individual. Sylvia Berman, of Marblehead, Massachusetts, is working tirelessly to encourage others to make a difference. Her daughter, Susan Sillars, has been a patient of Charles J. Yeo, MD, for many months now, having been diagnosed with pancreatic cancer. Tragically, Mrs. Berman was already familiar with the disease, which claimed the life of her husband 14 years ago.

Last March, Dr. Yeo removed a portion of Susan’s tumor so that her daughter, Susan Sillars, of Marblehead, Massachusetts, is working tirelessly to help treat and find a cure for pancreatic cancer.

During this difficult time, Mrs. Berman has taken it upon herself to raise funds to support Dr. Brody’s research. So far she has raised over $32,000. “Because of this support, we have been able to scrutinize Mrs. Sillars’ tumor on the molecular level. Our hope is that this information will aid her family and other pancreatic cancer patients,” says Dr. Brody.

“The information that is out there can be overwhelming, and finding a surgical team who saw things differently and could offer us a new alternative has been profoundly helpful,” says Mrs. Berman. “It’s inspiring to see that our network of family and friends has offered so much kindness and compassion as well as financial support. It goes to show that the generosity of many – no matter how small the amounts – can make a big difference.”

To make a contribution to the Susan Sillars Fund for Pancreatic Cancer Research, please visit www.jefferson.edu/surgery/giving. html.

In Gratitude for Exceptional Care

Anna Hotz, a Medford, NJ, native, has made a gift to the Jefferson Breast Care Center in honor of her doctors Anne Rosenberg, MD, and Stephen Copit, MD. The commitment became a family affair when her son Jack, Steven, and Chuck matched her contribution with winnings from a Cape May, NJ, fishing tournament in April 2006.

Mrs. Hotz is grateful for the excellent care she received and the personal relationships she developed with her physicians. “Dr. Rosenberg, for all of her accolades and reputation in the field of breast cancer, is a very regular, low-key person,” says Mrs. Hotz. “And Dr. Copit is very passionate with his patients and about his practice. He treated me like one of my own sons would treat me.”

The Hotz family gift supports the new Jefferson Breast Care Center, where patients can receive information, counseling, and other support throughout their care in one location.

To make a gift to the Department of Surgery, please contact Lara Allan Goldstein at 215-955-8797 or Lara.AllanGoldstein@Jefferson.edu.

Glenn Whitman, MD, has joined the Department of Surgery’s Divisions of Acute Care Surgery and Cardiothoracic Surgery. He comes to Jefferson from Temple University where he served as Associate Hospital Director of Perioperative Services and Director of Transplantation. Dr. Whitman will head Jefferson’s Surgical Cardiac Care Unit.

Pankaj Patel, MD (JMC Class of 1991), has joined the Division of Acute Care Surgery. Dr. Patel is returning to Jefferson from Penn State College of Medicine. He specializes in Trauma and Surgical Critical Care.

Vincent Armenti, MD, PhD (JMC Class of 1982), has returned from Temple University to teach and continue his work as Principal Investigator of the National Transplantation Pregnancy Registry which he founded at Jefferson in 1991. He holds a primary appointment in the Department of Pathology, Anatomy and Cell Biology.

Paul DiMuzio, MD has been named Director of the Division of Vascular Surgery and the Measey Professor of Surgery.

Cataldo Doria, MD, PhD has been named Director of the Division of Transplant Surgery.

Thomas Tulenko, PhD Director of the Division of Surgical Research, received the Dean’s Citation for Outstanding Faculty Mentoring and was also recently awarded Diplomate status with the Accreditation Council for Clinical Lipidology.

Gerald Isenberg, MD has been named an Honorary Fellow of the Puerto Rico Chapter of the American College of Surgeons.

Kate Vindu a first-year JMC student, has been awarded a national one-year Student Research Fellowship by the American Vascular Association. Her project, “Differentiation of Amniotic Fluid Stem Cells”, will proceed under the direction of Dr. Paul DiMuzio.
