Organizations across all industries are working together to focus on the quality and cost of medical care in the United States. The nationwide mindset is shifting from interventions that can cure disease to prevention, wellness and chronic care management — work that requires tighter coordination across the continuum of care and a more active role for patients and caregivers. Payers are encouraging and supporting innovation in health care delivery systems, helping them adopt new technologies and methodologies to care for patients. Finally, economic necessity is motivating the government and the private sector to bend the health care cost curve, while achieving and sustaining better clinical outcomes.
